I am getting these threatening emails saying because I have had an email address of ww7a@yahoo.com for years a so-called amateur radio licensee ww7a OWNS my email address..i.e.owns ww7a on the internet.

Does he owm ww7a on the internet? Where do I take these threats?

Gary,
I think you should pick a different email address since I am the owner by Federal license of the Amateur Call Sign WW7A. You are not authorized to use that call sign in any form. It is a violation of Federal law. Please desist from any further use.

Thank You

Regards
Dr. Andrew Forsberg WW7A

Is this repeater in the ham bands ? If so, the FCC does not need to be contacted nor do they even want to hear about it. Any ham can set up a repeater on any ham frequency allocated to repeaters as far as the FCC is concerned. Just do not interfear with an established repeater.
While it is not absolutly necessary you should contact the group in your area that does the coordinating. Get on a repeater or two near you and find out who owns it and ask them who to contact. If you are in the general area of NC, SC,VA and another state or two near there I could tell you who to contact.

Russ wrote:
>
> Where can I find out who to contact (FCC?) about seting up a repeater on a mountain top? I have the repeater, duplexer, antenna, hardwire, permission from site owner, etc. I need to find out the specific protocols for using the system or if I can. I also have the repeater programmed for a frequency. System was taken off one mountain and donated to me to use in generally the same area.

I would say take it to the trash can. If you do not transmitt on the radio the FCC could care less. That is like me picking out my name and if your name just hapens to be the same , it is first come first served on the internet address.

No, not legal to communicate on aircraft freqs without a type certificated
radio.

Aircraft freqs are am, so most HT's cant be readily modified.

For the moment, tell him to get stuffed. That is, unless he can cite
the appropriate federal regulation which supports his claim.

Well, Dr. Forsberg, it would be more to the point if you were to cite chapter and verse of the "Federal Law" which stipulates these conditions.

As for me, if someone were to have an internet address which included my call sign, I would be right upset also. So in some regard I sympathize with you.

If you truly have "the law" on your side, then the obvious response is to make a formal complaint. Otherwise, take your lumps and shut up.

Anybody got a good source for RF chokes? I've looked since yesterday and can't seem to find a good one (Hard to believe, it's true). The only thing Radio Shack had was some split beads and two, two packs of tiny chokes that don't cut the mustard.

I've got three computers on a Local Area Net in close proximity to my HF rig (Icom IC-730). I'm running a random length antenna through an MFJ-949E tuner. I only run one computer during QSO's and am trying to integrate computer functions into shack operation (packet, spectrum, logging, etc). I know that a random length on HF and computers don't mix very well. But, my situation's difficult (no attic, no towers, can't run wires, etc:(

Thanks for any advice and direction you can give.

One other thought. Offer to sell him this email address. I have heard
of big companies spending big bucks just to buy some URL from people
that have gotten there first. I don't remember the company but someone

had three leters that were the initals of their girl for a url and some
big company wanted it so they offered lots of money for it.

A couple of questions for zz4@webtv.net AKA ww7a@yahoo.com.

#1, Why do you want to use someone else's identity for your email address?

#2, Just how did WW7A find out about you and your email address?

It sounds like there is more going on here than your telling us.

How is it his identity, for someone who has no idea about amateur radio the
ww7a means nothing to them, except whatever signifigance they put on it.

>on a mountain top?

You'll need to apply for coordination to your local frequency coordination group. What area are you in?

Setting up shop without coordination documented is an invitation to problems. As long as the frequency pair is open and no-one's ahead of you on the application list, coordination shouldn't be a problem.

If you're thinking of using it with a 'built-in' antenna tuner, better think again, they're not designed for long/random-wire operation. With an external tuner designed for the job, a random or long wire antenna works great.

Send the good doctor to www.arrl.org.. The ARRL maintains a
server where only he can have his Call Letters..

I seriously doubt the "FCC" has the power to restrict the use of
several Hundered thousand alpha=numeric designation on a
WORLD WIDE INTERNET..

Tell the good doctor to get stuffed..

Just my opinion..

Bob

I tend to use the old ferrite rods out of medium wave radios and wind
the cable round until minimum noise, then chop off the rest of the
ferrite, can sometimes be a critical as half a turn to find the minimum.

Big advantage is I don't need to remove plugs and can do it easily while
interference is present.

I am getting these threatening emails saying because I have had an email
address of ww7a@yahoo.com for years a so-called amateur radio licensee
ww7a OWNS my email address..i.e.owns ww7a on the internet.

Does he owm ww7a on the internet? Where do I take these threats?

It would be interesting to me to know how you happened to arrive at this
particular e-mail address and why you resist change.

Bob

Gary,
I think you should pick a different email address since I am the owner by Federal license of the Amateur Call Sign WW7A. You are not authorized to use that call sign in any form. It is a violation of Federal law. Please desist from any further use.

Thank You

Regards
Dr. Andrew Forsberg WW7A

Do I own w3bnr? Only as an amateur call. If I were not an amateur and perhaps my last name was Beaner I could have chosed w3bnr as an e-mail or even as a URL location address and the real w3bnr could not do a thing about it. Why w3bnr? Three w's signify the world wide web and bnr for BeaNeR. If you care to do a search on w3bnr you will find that in addition to this address, there are about 6 others that start with w3bnr and you will even find a picture on a Japanese site that is w3bnr.jpg. BTW the picture is not of me or my shack.

You want to use ww7a@xxxx.xxx - go right ahead and do it. There is no law against it (unless it's already in use and in that case you won't get it anyway). SO DON'T SWEAT IT!

"internet-terminal zz4" <zz4@webtv.net> wrote in message news:20154-3B9FC032-20@storefull-134.iap.bryant.webtv.net... I am

getting these threatening emails saying because I have had an email address of ww7a@yahoo.com for years a so-called amateur radio licensee ww7a OWNS my email address..i.e.owns ww7a on the internet. Does he own ww7a on the internet? Where do I take these threats? <SNIP>
Regards
Dr. Andrew Forsberg WW7A

A couple of questions for zz4@webtv.net AKA ww7a@yahoo.com.
=A0=A0#1, Why do you want to use someone else's identity for your email address?

No Offense but this involves allot of brains? Someone elses identity? The internet consists of choosing USER NAMES for whatever service you might sign up for...be it a freebie or a pay service....Some places allow a minimum of 4 digits..some three. Sometimes it is easier with 4 digit user names than dfhdfhfghjfxghxrtyuuudr5674s6uaze5y54uys4675474ry@yahoo.com I think yahoo requires at least 4 digits. If my parents named me george bush am I using somebody elses name? I presume I could go to court and change my name to anything desired if that be the case.
=A0=A0This issue does not involve amateur radio !!!! I chose numerous 4 digit user names years ago when signing up for various internet services.I think I have several more email addresses with user name ww7a.(theres still hundreds of free email locations)
As to domains I have not even checked on ww7a but if available I really have no desire for it. ok.... =A0 =A0 http://www.register.com/ =A0 I see all ww7a domains are available. Would it not make sense to get the domain vs. telling everybody on the internet the ww7a user name is legally theirs and playing like an officer of the court? =A0 You could be anybody@ww7a.com =A0 =A0 Go to =A0 =A0 http://www.registerclub.com/ =A0 =A0 and pay $10 and its yours.(next buy some web space and set up email services) Heres a good one =A0 =A0 http://www.valuablehost.com/ =A0 $35 a year..200mb
I have had =A0 ww7a@yahoo.com =A0 =A0 for years. The brilliant thing is if I surrendered it I don't think the user name is availble for years.I've had user names at yahoo 4 years ago that have not been re-issued yet.I go there today and although all email gone I get a prompt if I wish to reactivate it.
=A0=A0=A0=A0I never tried other large free services like Hotmail. Is ww7a available at Hotmail? At aol?
I now use msn as an isp.I got a 3 digit user name..Is ww7a=A0taken? Don't know. I also pay $5 a month for the webtv.(being an msn subscriber) Years ago I chose 6 3 digit user names with the webtv service.

#2, Just how did WW7A find out about you and your email address?

I presume he wanted an email address at Yahoo..one of the larger email services that offer other free services like websites,photo storage,messageboards,clubs,etc. (ps..they are possibly going from free to pay-pay)
It sounds like there is more going on here than your telling us.

--
'73' From KB9TMP

NO..I get an email as I have c/c/p telling me to quit using ww7a on the internet and using language as if I'm going to be dragged to court or arrested.It does say I am a federal criminal. =A0 Maybe I am over-reacting? I have so many problems here and so busy I don't need others. Now I have to take the time to research this matter and write to fcc and all that stuff. =A0 AGAIN..THE FUNNY THING---if I gave up ww7a under threats it might be years before available for others.---maybe thats not it...don't use ww7a anywhere on internet?
http://www.geocities.com/ww7a/
=A0=A0=A0=A0Actually I don't even care about ww7a..maybe I can get another 4 digit user name at yahoo? It would take months to correct my address on record around the internet.

----you see why I am annoyed? I don't have the time for this nonsense plus I don't even feel good.Why should I have to devote hundreds of hours of research over this matter? Now I've gotta communicate with the fcc over time to get a legal opinion.

Amateur Radio callsigns are like trademarks--why am I using someone elses identity???? Best I know http://www.yahoo.com/ gave it to me to use way before any amateur radio callsign ww7a existed.

So I guess I need to frequent all the usenet newsgroups asking questions of the internet about amateur radio callsign trademark rights.

hey..this guy can have his ww7a but would take me months to get my emails re-directed and changed,etc. I really don't like caving in over threats.

So all you that use the big internet services and possess user names that equal amateur radio callsigns better drop them and switch !!!!

--but of coarse why would somebody want to use anothers identity to begin with?

Forsberg is wrong. While that happens to be the same letter and number as an Amateur call sign, there is no copyright, trademark or any other right to it, A kid on a walkie talkie from Toys R Us could use that designation, or it could be on anyone's license plate. As long as you are not claiming it to be an Amateur call sign assigned to you, you can use it in any way you wish. Thanks and call me at 717-338-2502 if any problems.

He does not own ww7a on the internet any more than you or I do.

What kind of threats?  If they are threats against your person,
take it to you local police.  If it's harasment, take it to his
ISP.  If it's an isolated case of name calling, delete it.

Ralph,
I guess I should have been more specific. The frequency is in the ham
band, and I live in North Idaho. I have not tried to contact anyone up
here that owns their own repeater. But I will, thank you for the hint.
But I was told by one person that "hams", that I didn't need to
contact a coordinator. Then I heard from another source that I did...
go figure :)

Thanks for responding Capn Crunch,
This sounds like the info I would need for private or commercial
frequency coordination. I am looking for information for ham repeater
operation.

thanks WP3JQ,yes indeed the wire did come from radio shack,ham radio gear is
kind of hard to find here in RI,and i do have room to splice another piece onto
the orig. also using a MFJ-16010 random wire tuner. thanks for the response,and
was that thread you mentioned in this particular NG ?

While you do not have to contact a coordinator, it is a good idea to.
If you coordinat a repeater then you have sort of a right to to that
frequency in your area. That is , if another person puts on an
uncoordinated repeater on the same frequency and there is an
interferrance probelm you and your coordinating body can ask them to
remove the repeater from your coordinated frequency. If they do not
then you and the coordinator can contact the FCC and probably they will
side with you and the interferrign repeater will have to chavge
frequencies or be taken off the air. This has hapened.

You can go here to learn more on the process. There are links to other
coordinating bodies and also check out the FAQ area.

http://www.sera.org/index.html

The SERA was started by some local hams not too long after the repeaters
were starting to become into use in the 1070's.

A lot of CBers like to overmodulate because
they think it makes their signal louder. Of
course they are going to splatter. Not much
you can do because you can't filter it out. I've
seen mobile rigs that use three bus alternators
and put out in excess of 10KW. This might not
splatter if properly filtered and if the audio is

not overmodulated. You might still hear them if you are close enough to have your front end saturated.

The FCC will act in the case of a base station but not much they can do to control mobile rigs. I have heard of mobile rigs getting busted but it is rare. You might have some luck if you could get a tag number. I know it's a pain but if it really bothers you it might be worth it to pursue. Put together a mobile beam to find where they are and get a tag number. File a complaint. If you can get a couple of them busted, the rest will take the hint and avoid your location for awhile. This could be a rewarding hobby in itself.

Complain and keep on complaining. Let us know if you get results. It may or may not be futile but if it you go at it with the right attitude it might be fun and you will inspire other hams if you get some of them busted.

Heard an EOC complaining today that he couldn't get enough ARES and RACES members to volunteer to help out in the disaster here in DC. Mentioned that if they don't want to go to work they may have their memberships revoked. He has a lot of problems with people saying they will show but then they don't show up.

The day of the disaster they would not let non-members participate, now they are taking anybody who is willing to work.

Seems that the exclusive organizations can't put up when the doo hits the fan.

I put in over 34 hours with the American Red Cross Pentagon operation the first three days. Maybe they should give

me a membership. I've earned it. Then again...

Highly recommended by me is Batteries Plus on Rt. 1 Woodbridge, Va., one mile north of Ham Radio Outlet on the opposite side of the road.

I went in there for a repack for my old Kenwood HT. I was wearing my Red Cross T-shirt. When I mentioned that I was working the Pentagon detail they repacked my battery while I waited then gave it to me for free. Great guys. Give them your business.

10 KW mobile, is pure bull..

14.3 Volt X 700 AMPS = 10 KW Now that is input.

If you can get 50% effiency out of the footwarmer I
would be amazed.

Which means IF you could keep the voltage at
14.3 Volts you would need 1400 AMPS

MUST be a 50 Pill... <BG>

CB fairy tails!!!!

Just My Opinion..

Not so far-fetched. Back in the 70's there was some kind of competition among illegal mobile CB'ers that was won by some yo-yo with a van running a pair of 8877's with a measured output of 6 kW. I don't know what he used as a power supply, but a big dynamotor could have done the trick.

A normal automotive starter runs about 200 amps, so just 4 batteries in parallel could produce 800 amps, although not for a long key-down period. Also, over-driven amplifiers by their nature are very efficient...they turn into simple switches, losing all semblance of linearity. They can run nearly 90% efficient, although they splatter from DC to daylight!

Non-mobile CB stations run that much power and more. One clown on Texas was busted with a 25 kW transmitter when a ham at the local power company wondered why someone was requesting 3-phase power at residence!

Just wanted to let those people who are interested, know that I've
posted a copy of the TH-78a manual on my website. It's available as a
PDF file only. I'm posting this as a service to the Amateur
community.

http://ucsub.colorado.edu/~paigem/index.html

In article <20154-3B9FC0C4-22@storefull-134.iap.bryant.webtv.net>,
zz4@webtv.net (internet-terminal zz4) writes:

>I am getting these threatening emails saying because I have had an email
>address of ww7a@yahoo.com for years a so-called amateur radio licensee
>ww7a OWNS my email address..i.e.owns ww7a on the internet.
>
> Does he owm ww7a on the internet? Where do I take these threats?

Certainly not! Just because a person is a ham radio operator does not mean he automatcially has a reservation to use his callsign on every domain name in the world. The only person or entity who can make that kind of a claim to a particular address is someone who is already using it, and then only on the domain he is using it on, AND THEN only for the time he is using it. Once he abandons that address, anyone alse can use it.

I would also like to be the only person to have my callsign as an address. However, that would mean having to patrol the millions of domains on the Internet, a job which is just not possible.

If this WW7A character is so worried about someone using an email address that duplicates his callsign, then I suggest that that person should register his callsign as a domain name.

73,
Paul N0JAA

That will not take care of WW7A's concern.  There are many outfits that are
selling or giving away forwarding addresses.  Anyone can get WW7A@xxxx.xxx
that wants it from one of these sites.  NetForward is one of them.  They
will give you 5 address for $10.00/year.  Every one of those could be
WW7A @ someplace.  Perhaps we should all go to these sites and quickly
grab up all the WW7A@ addresses.  Not a thing he could do about it.

DO YOU WANT YOUR EXPERIENCE OF YOUR LIFE?

JOIN THE XP1AB DXPEDITION AND FEEL/HEAR THE PILE UP FROM THE RIGHT END.

Join the XP1AB DXpedition to Sondrestrom. We leave Copenhagen Airport 24 October on 06.00 GMT and we are back in Copenhagen 31 October at 20.00 GMT.

The travel costs are on your own. The travel costs from Copenhagen Airport and back are approx. EUR 900 including hotel and 3 meals a day.

LET THE WORLD COME TO YOU.

We are QRV on all 6 contest bands during the CQWW SSB DX Contest on 27 and 28 October.
It is possible to work with own call/OX as soon as we are ready to go on air. Also on CW or RTTY.

You are

- A trained operators mainly SSB on HF.
- Used to use headset, foot switch and laptop for logging of QSO
- Speak at least English as well as your native language.
- Can travel in the mentioned period. It is also possible to travel form

Copenhagen on Friday 26 October and back on 29 October. You can also travel from Canada.

ARE YOU SERIOS INTERESTED?

You can find details about the DXpedition on http://www.qsl.net/xp1ab

You can also contact me by E-mail jr@danamps.com, by phone (+45) 43 54 16 95 or by fax (+45) 43 53 16 95.

Please contact me as soon as possible.

Best 73 de OZ0J, Jorgen Romming

--
Now you have the change to work XP1AB.

XP1AB will be used during the CQWW SSB 2001 contest.

See details at http://www.qsl.net/xp1ab

Quitters never win - Winners never quit !!!
THERE CAN BE ONLY ONE !!!

The big boys run huge 2 volt batteries in series to get 14 volts. A CB contest is called a "keydown." Observing one of these is quite interesting. Saw a guy in a van w/ dark tinted windows blow his solid state amp. It lit the inside of the van so bright I could easily see through his windows. Saw a Suburban w/ two bus alternators throw and alternator fan through the hood. Schrapnel flew, people ran for cover, I laughed my butt off.

Some of these guys spend huge amounts of money on the rigs. If the FCC were to confiscate a rig it would be unlikely the operator would want to put out the money for another.

BTW I hardly think 10kw is the largest rig you might find.

Woodchuck

Subject: Amateur Radio Operators sought in NYC area....
Message-ID: <20010916152815.28395.00001294@mb-md.aol.com>
Xref: archiver1.google.com rec.radio.amateur:2283

Subject: ARES ASSISTANCE - PLEASE CALL ME

ARES is seeking additional volunteers from the Greater New York City area----to assist in supporting the World Trade Center disaster relief and recovery effort. ARES is assisting the American Red Cross and emergency management officials. New York City-Long Island Section Emergency Coordinator Tom Carrubba says volunteers must have a VHF (2-meter) or, preferably, a VHF/UHF (2-meter/70-cm) mobile radio, power supply, and mobile gain antenna. This is a change from previous requirements. Carrubba says hand-helds have not been sufficient to deal with the difficult operating conditions. Amateurs are working two 12-hour shifts per day, 8 AM to 8 PM and 8 PM to 8 AM, "plus or minus three or four hours, mostly plus." All volunteers must report to American Red Cross Headquarters (address will be provided when you contact me) for credentials and assignments. You must use public transportation to ARC HQ because of limited vehicle access; there is no parking in that area. Amateurs with the necessary equipment and willing

If you can help please contact Steve, K2SO at k2so@arrl.net or (908) 289-6573. Also please help by sending this to other hams in NNJ.

THANKS & 73

73's,
Mike

You are probably right. Yes, let's grab up all of the WW7A addresses!

If that won't take care of WW7A's concern, then that is HIS problem.

73,

Paul

>If you are concerned about this, please become involved. Monitor and document
illegal signals. If you locate the source, gather as much data as you can and
forward it to Riley.

Not a bad idea, but it takes away time from the hobby. When you hear such folk,
double check to make sure they are not just hams speaking another language, or
using their full ten minutes to ID. Then, set your filter on CW and rap out a
CQ. Responses to cw cq's seem to come much easier on bootlegger frequencies
than on clear frequencies. (If they are using AM, be sure to zero the carrier.)
That may because other hams, irritated by the illegal operators, are also
listening to see what/who the bootleggers are. When it comes to CW and SSB, the
CW usually wins - especially with a good filter.

"Pay-to-Pay" (e-file) is not the smart way.
If only IRS were really a "service" !   AK

Ignore him.....

There is NO "violation" of any law here.

As long as you don't TRANSMITT on the air using his call sign you have done nothing wrong.

I did a quick search and this individual picked his call sign, it was not FCC assigned. (Vanity Call sign program).

If you have used it for as long as you have indicated, you might actually predate his selection of the call letters.

What it boils down to is just trash the e-mails and forget it. He doesn't have a leg to stand on.

If he persists...report him to HIS ISP for harassment.

Karl Domrose

Xref: archiver1.google.com rec.radio.amateur:2292 rec.radio.scanner:23582
alt.radio.scanner:15643

For Sale: Realistic PRO-2004 Scanner with External HB232
computer-control interface. Pictures available on request. Detailed
information follows:

The Radio: Radio is in very good condition. It has been through
numerous modifications:

1. Full coverage restoration.
2. Increase from 300 to 400 channel capacity.
3. Capability of 36 independent "banks" of 400 channels each,
controlled by toggle switches in rear of radio. Only one 400 channel
```

"bank" can be
scanned at a given time but it affords for numerous different scanning schemes selected by the switch positions.
4. Pushbutton control on rear of radio to select/deselect keyboard beeps.
5. Removal of 120 volt power transformer to accomodate interface and HB232 makings, radio runs on 12 volts only.
6. Front mounted large signal meter. Mounted to the left of the volume control. As a result the headphone jack is not available.
7. FM discriminator tap on rear of scanner for data decoding.
8. Radio did suffer the infamous PRO-2004 "poor solder" syndrome and has had such problems repaired.
9. Blue keyboard overlay exhibits 40 channel per bank setup.
10. LCD display is in good shape.
11. Radio has always been in an indoor environment; never used in a mobile capacity.

The HB232 Interface: Mounted in 8"W x 6"D x 3"H project box. Connects to radio through short DB25 male cable to DB25 connector mounted vertically on rear of radio. Connects to computer via DB9 Female cable. Original HB232 software burned onto CD will be included, as well as the DEMO version of Redshift, a Windows 95/98/ME software package for the 2004/HB232 combo.

Miscellaneous: PRO-2004 Owner's manual and PRO-2004 service manual. Pictures are available on request and will be e-mailed to you directly. Power supply is NOT included; I run the radio directly from a custom power setup in my shack. There was never a "wall wort" type supply included with this radio and as previously mentioned the 120V transformer was removed to accomodate the DB25 connector and internal makings of the HB232 interface. The power supply is a standard coaxial type and is readily available for cheap $$ at Radio Shack.

Reason for selling: Not seeing much use in my shack these days; I'm gathering money for other radio purchases.

Price: $400 O.B.O., including UPS COD shipping.

Method of payment: Advance payment by POSTAL money order only, or UPS COD with POSTAL money order only.

Please do not reply here, if interested E-Mail me at
halligan@mediaone.net

Thanks for reading.

Scott

Hi, I'm about to build the EconOceanic crystal shortwave set
http://antiqueradio.org/econmain.htm
I was just wondering, is there any way to build a crystal set without
needing to have it grounded? I'd like to make my set portable. Most
portable radios don't need to be grounded, and I'm curious as to how
they get away with it. If I can do away with the ground, is it possible
for me to still build a set with high sensitivity? Thanks for your help.

I've much experience as an instructor and real-world is often a very good place to learn. If the goin's too much, you can always ask the individual to step aside 'til it's appropriate to let him take over. I'm not in ARES but am preparing (since we don't have it here). But, if there's additional material to learn, let an experienced radio operator work with 'em and let the "aspirants" follow up with the additional material afterwards. I'm sure they'll follow through. If every ARES type had the opportunity to sit side saddle with folks who wanted to help, they could let em run it alone soon and would double their ranks. It seems the idea is letting people help.

I agree with Capn Crunch, if you are within +(-)30k of an already
coordinated frequency, you will be the one interfering and the situation
will be a mess and yes I'm talking about the "ham bands". I can also state
from experience that when this happens it is not just an easy call to the
FCC, I think it was years of complaints to the FCC and the station was
finally moved.  Coordination is painless and will protect yourself in the
future.

Hey there everyone! We're a live 24/7 internet station broadcasting off

a high bandwidth server. Everynight at 7pm (EST) we have live shows,
each with a BROAD range of topics!

Tonight, Tuesday September 18th is our best Talkshow - The Kris and
Craig show! 7pm - 10pm (or later)   We take live callers, ICQ or AIM
users so you can participate at ANYTIME!

Join in NOW! We offer all major formats for broadcasting!

Listen in today!

South African radio amateurs will be operating a special event station with the callsign ZS1HELL from "Die Hell" from 16h00 UTC on Friday 21 September until 9h00 UTC on Monday 24 September.

Die Hell ("The Hell") is an extremely remote valley in the Swartberg mountains near Oudtshoorn. For many years it was thought to be uninhabited until about a hundred years ago when a completely self-contained and isolated population was discovered living in the valley. They remained cut off from the rest of the country until a road was built in 1960, but many areas remain accessible only on foot or by 4x4.

The special event station will issue a special QSL card to all contacts. The following frequencies will be used:

	CW	Phone
160m	1.834	1.834
80m	3.520	3.674
40m	7.020	7.080
20m	14.020	14.180
15m	21.020	21.280
10m	28.020	28.480

Two of the twelve operators are new amateurs so there will also be opportunites to work the station at slow morse speeds in the region of 10-15 w.p.m.

Hoping to work you from "Hell"
Andrew ZS1AN

Please NB that my reply email has been altered to prevent spam. The correct email address is my callsign at qsl.net.

Rick,
I agree with what you're saying.
What I did is I bought a repeater that came off of one mountaintop
roughly 50 miles as the crow flys from where I plan on installing on
another mountaintop. No one uses this frequency in this area (atleast

```
from all the listening i've done) since the repeater was removed.
Now all I need to do is find the coordinator for this area and get
moving.

Thanks
Russ

```

```
hi.i'm a newbie and got a great deal on an icon-706(no mkII),problem is
i can't figure out how to get onto 2 meters.
went to radio shack and got a 2M-70cm mobile antenna made to stick-on
glass of a vehicle's window. i stuck it on a small piece of plexi,
hoping to use it @ home and on camping trips.(i can clamp it to a tripod
and raise it aprox. 17 ft).
clamped it to the building@ home and can recieve but i get no responses.

am i doing something wrong ???
please help, i'm goin on a fishing trip w/ some buddies and want to show
them the wonders of ham radio,but i'm stuck. is there a users manuel
available other than the not to explanatory booklet that comes with the
unit ???
hurry ! i've got to leave fri. no computer at the fishin shack !!

Hi Brad does the repeater you are trying to get into have a PL tone
associated with it?  If so make sure you  have the PL tone set up on the
VFO normally "B" that you are using for your transmit frequency.  The
706 MK II is strange in that manner and had lots of calls about the same
problem when I was a Technician in a radio store and the unit first came
out.  73's Bob N4BK

The Clear Lake Amateur Radio Club will hold HamFest 2001 on October 20th.
Full details www.clarc.org/hamfest lots of vendors, only 8 tables left to
be sold for ham sellers.
This should be a great event.

thanks bob, i went to a repeater web site and got the tones i need,but i
think the antenna is just to small, so i went to R.shack and got a 5/8
wave mag mount.i'm going to try sticking that on the metal roof of the
cabin,hopefully i'll be ok.
this unit is a "plain jane" ic 706, not the mkII.thanks for the reply,
and wish me luck,talk to you when i get back next weekend.
73's brad

<br>please help, i'm goin on a fishing trip w/ some buddies and want to
show them the wonders of ham radio,but i'm stuck. is there a users manuel
available other than the not to explanatory booklet that comes with the
unit ???
<br>hurry ! i've got to leave fri. no computer at the fishin shack !!</blockquote>
Hi Brad does the repeater you are trying to get into have a PL tone associated
with it?&nbsp; If so make sure you&nbsp; have the PL tone set up on the
VFO normally "B" that you are using for your transmit frequency.&nbsp;
The 706 MK II is strange in that manner and had lots of calls about the
same problem when I was a Technician in a radio store and the unit first
came out.&nbsp; 73's Bob N4BK</blockquote>
thanks bob, i went to a repeater web site and got the tones i need,but
i think the antenna is just to small, so i went to R.shack and got a 5/8
wave mag mount.i'm going to try sticking that on the metal roof of the
cabin,hopefully i'll be ok.
<br>this unit is a "plain jane" ic 706, not the mkII.thanks for the reply,
and wish me luck,talk to you when i get back next weekend.
<br>73's brad</html>

This rig, loaded, costs nearly $5K. Mine has worked, faultlessly, since I bought it way back when. Hope this one has the great, internal switching power supply. The internal power supply makes no noise on any band. I don't think I ever found so much as a rig-generated birdie on it. I highly recommend it. At $1K, it's a real bargain! You can set it to WWV's freq thru the hold in the case with the TCXO and tell your local AM radio stations how far off freq they are. Although it's illegal to use it on commercial applications, it will easily pass for freq stability...(c;

I have a ADI AT 600HP 2 meter/440 dual band ht.

This unit is in good condition, only flaw is a small scrape on the LCD, and some minor wear on the keys. 8-9/10

This unit has been expanded (via keypad, not hardware) to TX/RX at least 130-170 and 430-470, also includes 800mhz and 118-??? aircraft AM RX. This unit has 5 watts of power on high output.

Comes with radio, 2 batteries in decent condition, wall charger, and ADI drop-in rapid charger.

$175 OBO plus shipping

Please reply via private email if you are interested.

Me.  For right now, anyway.  I am using a Radio Shack HTX-10 for my main HF at
the moment.

Hi all,

I was wondering if anyone ever built him-/herself a low noise
broadband antenna pre-amplifier with GaAs FETs.
I think it must be possible to build one. Main usage for me
would be as antenna amplifier for my discone antenna.
The reason for a GaAs FET is the low noise figure.

As a example SSB in Germany makes one from 50 - 3000 Mhz
with a gain of 13dB and a noise figure of only 1.8 dB!
See e.g.:
http://www.thiecom.de/lna3000.htm (in German)
The price is DM300,- (approx. $ 140,-)

I am wondering what type of GaAs FET they use....

Does anybody have some plans online or know of some application
notes online?

Thanks in advance,
/Marc

Just installed a Uniden into my brother's work vehicle, he just wanted

something on 10m so that he could pass the time between calls. Due to the
vehicle vibration, possibility of theft, etc. he went with a single bander (and
I mod'ed one of those 11m amps, cleaned it up {a bunch!} and grafted it onto
the system). He now has a nice 100 watt signal, which is fine on 10M, esp.
when the band is open. If it gets damaged or stolen, at least it's not his
FT100D. Drives the HamStick nicely, and is not so much of a theft target.

A

WA8ULX....do you realize you are part of the problem if I read your
post as correctly intended?

Sounds like you want to keep kids out of your tidy little hobby and
world.
"Keep them kids out, they don't know what they are doing, and they are
going to
mess everything up" you say. (if I read your meaning right)

No WONDER younger people don't want to be involved with an attitude
like that. And we are not dumbing down the requirements, even if we
dump the CW requirement. WE still have the operating rules (which I
think are the MOST important, and still ignored by current operators)
and the technical requirements.

If you still feel that CW is very important (as I do) issue a special
attachment to each class of license, to commend the person on the CW
achievement. (like a award of valor or something). CW was needed
because receiver technolgy was poor and CW was the only way to
comunicate in high noise situations. Now with all the noise reduction

on current receivers, CW is less important (but still is an important *MODE OF TRANSMISSION*)

Why do I feel the operating rules are the most important? Listen on the bands and figure it out for yourself. I'd be for re-testing on the operating rules every 5-10 years to renew so people understand how to use the frequencies properly. Plus, test or review on the possible punishment for operating illegally, to remind people it's not a toy!

Technical requirements are important too. Remember when DSP was just another add-on project for your radio? If the major radio makers market shrinks much more, improvements and add-ons to new radios will be slow to show up in our equipment, that's if the company still wants to make radios for amateurs.

The ham reaching out to younger members is right on track. If I was 18 years old and had a choice of two clubs (doesn't matter what the clubs are for)
I'd go where some people my age are a member of. How can you expect a young person to join a club with maybe one or two people that are within 5 years of his age? Older people are intimidating to younger people. They don't share the same interests. Proof is, how exciting does your kid feel when you want to pack up the family for that old time family reunion? If no one their age is there, it's boring to them! It's not anyone's fault, it's just the way it is!

I'm so sick of this bickering against getting new people in, especially against younger people. The hobby is going to die if something isn't done soon! We have a lot more competition today for people's time than in the "old days"! If you are so concerned about younger people messing up the hobby, be more active in being a mentor and teaching them the proper way of operating, not keeping them out! We were all beginners at one time, and remember, nobody's perfect!

The problem with people jamming repeaters, jamming on the HF bands, transmitting out of band, selling bad equipment, cheating on Ham tests, etc...etc... etc....started way before the rules were relaxed. It started a long time ago, when people forgot to respect others, forgot good manners, and disregard any rules.

Equate it to you having a business. If all your customers are over 50, you know in order to survive, you need to bring in younger customers, to survive today, and to hand the business down to your kids in good shape.

How do we want to hand down this hobby to the next generation? In shambles, or with a good strong membership? DON'T be the problem, be the solution, or at least don't be a hinderance. Know that you at least tried to keep it going for the future generation.

73
Mike

>and the technical requirements.

Technical Requirements, you are Kidding me right. The present written Test is a JOKE, no knowledge needed just Memorize some Questions and Answers.
New figures and info on the latest Ham Radio is listed in the following Report.
ARNewsline Report #1254 - August 24, 2001.
One of there comments are this:

"Reducing the Morse testing speed to 5 words per minute has not accounted for any significant numbers of new applicants for ham radio licenses. What it has done is to motivate existing hams to upgrade to get new privileges, but that's about it. The bottom line is that the number of amateurs in each license class has merely been rearranged."

So tell me again how Restructuring is working.

Well, since you want a vote, mine is no. I don't. The price of a used
all band rig is not much more than the single banders. Maybe a little
more, but not enough to get in a twist about...I'd rather have the old
all band rig. The performance is almost always better, you have 100w,
and you have all bands. Or at least 80-10 anyway...What is cheap in
this range you might ask??? An old TS-520, old drakes, old icoms, old
yaesu ft-101's, etc. The 10m rigs are fine if you work only 10m, but I
could never be stuck there myself. I'm on the lower bands more and
like variety. Well, thats my vote... MK

Myself, I'd just use a soundcard program. There are quite a few. I've seen ones for code only, and many of the PSK programs will work CW also. Hamscope will do PSK31, CW, MFSK, etc in one package. It's free on the net. You can do almost anything with a good soundcard in windows. I hook my 706g up to the soundcard in the house. It gives me: good loud receive audio that sounds like a big radio, outboard DSP that eats the rigs DSP for lunch, audio recording, spectrum graphs, SSTV, PSK31, CW, RTTY, etc, etc, etc , all from a cheapy soundblaster AWE32. No real need to cough up cash for an outboard unit, and running from the sound card in windows means all work from the same hookups/controls with no need to change when you change modes, programs etc. Also you can control the radio from the same puter, and hamscope supports this within that program. MK

FYI, I am using the HP 54143 PHEMT. It is VERY friendly with respect
to noise matching and input reflection.   I have a bag of 'em
since I had to get them in quantity -- if you look, they should be
available
for between $2 and $4 each.   There are more inexpensive PHEMTs,
that might be better for other LF (<3GHz applications), but the HP
seemed
to have the best combo of input noise characteristics, input matching,
gain, and ease of bias (it requires positive gate bias, so it is
slightly
easier to deal with source inductance issues.)   Actually, it seems to
work
best at <1GHz wideband apps if you use about .5nh to 1.0nh, in the
source lead, therefore providing a very nice input match to reasonable
input impedances. (The HP PHEMT has very large noise circles making
input noise match easy.)

If all you need is the 2.0dB NF range, you might want to look at the
Stanford Microdevices part number sga4586, but it is just SiGe bipolar.

Both the HP PHEMT and the Stanford Microdevices parts have high
output power capabilities, and arent' very susceptable to overload.

I have a Cobra SR-900 16-channel scanner. I know, it is an oldie, but it still works very well for what I use it for, which is monitoring the local railroad frequencies.

Everything works fine except for the wall wart. It is intermittent, and I suspect there is a loose wire or connection inside the unit. Does anyone know if there are any of these wall warts still around? Or can you suggest a good replacement for it?

The wall wart's output is rated at 12 VDC, 500 mA, center terminal positive.

Thanks in advance.

Paul.

Since I am still a Tech Plus, I am stuck with 10 Meters phone unless I decide I want to work the Novice code subbands.

I keep telling myself that I am going to upgrade to General, but I don't do it. One of these days... :)

I also feel that CW is important and should be retained as a basic requirement, even if my CW skills aren't all that great. The radio world is fast becoming a place where only Amateur Radio Operators will know Morse Code. Therefore, it is up to us to ensure that this radio art is not lost.

Yes, CW is an art. It is also an important mode of communication, getting through when no other mode can. Even an entry-level Technician sending at 5 WPM can handle emergency traffic when no one else is available.

If we don't lobby the FCC to keep Morse Code as a requirement, then it will go by the wayside and down in history as an unwanted radio mode that no one cared enough about to save. And that will be unfortunate. Let us continue to honor the work of Samuel F. B. Morse and keep his Code alive.

For sale, Icom IC-751A. About an 7 on a one to ten scale, has some scratches and 4 holes drilled (looks like #8 screws) in the top lid. Great for DXpeditions, mobil, standby rig or first timer. Everything works. Puts out around 200 watts CW/SSB and about 50 watts AM. On board power supply. Plug and play. Comes with manual. $450 plus shipping, can deliver to the Shelby, NC hamfest. Photos available soon. ae4en@earthlink.net

<< Ok so your brother uses one, Do You or do you have a multi band, We are not talking just mobile here? >>

The question was, "How many hams use single banded 10 meter rigs." Finito. I gave an example which nicely fell into the category of which the answer was asked. No one asked to differentiate between fixed and mobile operation.

If you must know, my shack consists of a Yaesu FTdx560 HF rig, Swan 250C w/210 VFO (6M), Alinco DX70T/Mirage A1015G (HF/6M mobile), Icom 211/Henry 80 wt. amp. (2M all mode), Drake 2B/Q Mult., couple of Motorola VHF & UHF rigs, Yaesu FT470, Alinco DR570 dualbander.......probably a couple of other units hidden here and there.

Happy?

Andrew

I was recently given a Tempo One SSB transceiver by one of the members of my club. He says it works very well, but he does not have the manual for it.

Does anyone know where I might obtain a copy of this manual?

Thanks.

Hi Houston and surrounding area Hams - we are working hard to bring you a
great HamFest.
We have a "Wish List" where you can list the items you'd like the vendors to
bring. We have electronic table signup, we have some terrific prizes, and
some great demonstrations. For family members there is the Johnson Space
Center, Space Center Houston, Wings Over Houston Air Show, the Kemah
Waterfront and board walk, etc.

When: OCTOBER 20th
See www.clarc.org/hamfest.htm for all the details

To sign up for tables http://www.clarc.org/ereg.htm

Nothing wrong with that. I was a novice for 7 years until I upgraded.
The only reason I upgraded to extra from general was to get a new
call. I'm sure you will get it one of these days when you get time.
P.S. You know me...I was with you at field day. MK

I notice we are having another X-class solar flare today. The flux has bumped up to 199. And a proton event is likely in the next couple or three days. This happened about a week ago, and when we had the proton event, 6m went ballistic with E skip. I'm kinda predicting this might happen again in the next 2-3 days or so. You might keep an eye out if you like 6m. It was wide open when this happened last week. Sounded like 20m, but only lasted one day/night. You can watch the solar data to see when the proton event kicks in. My web page gives this info if you don't know where to look. I'm kinda curious to see if this repeats with every proton event. MK

I am a casual operator. On the ham bands I use digital modes (Pactor & RTTY primarily) and SSB. I am also involved with the CAP and use SSB on their radio network.

I am trying to decide how much I need to spend to get a good solid radio, with a good receiver (able to pull weak signals out of the weeds) and nice xmt audio.

I would like to keep my purchase to around the $1000.00 mark; can spend more but don't think I operate enough to justify the extra $$$$.

Here is what I have found so far:

FT-990s with all filters and TCXO (needed per CAP regs) for $1000.00 to which I would consider adding Timewave's DSP-599zx.

TS-690S/AT $650.00. Filters and TCXO need to be added. Same DSP-599zx comments.

TS-850S/AT for $850.00 to which filters and TCXO need to be added. Same comments about 599-ZX.

IC-736 for $895 to which filters and TCXO need to be added. Same comments about 599-zx. Have heard this rig is just so-so in digital modes due filtering compromises.

TS-870S with TCXO for $1500.00

IC-746 adding TCXO and filters. Has some built-in dsp and limited xtal filtering.

So far, these 6 rigs are in the same ball park money wise, with the 746 being the only new radio.

Next step up the ladder--
FT-1000MP for around $1700.00, but filters and TCXO need to be added.

TS-2000 (computer controlled only) for $1800.00, tcxo & DSP filtering built-in, no xtal filters avail. According to AES this rig has same HF performance as TS-870S with dsp filtering updated and improved over the TS-870.

FT-1000D for around 2K, all filters and TCXO included. Would the DSP-599zx be needed with the multiple layers of xtal filters here?

IC-756 Pro for around 2100, tcxo & DSP filters built-in, no xtal filters avail.

These next 4 rigs are in the same ball park money; only the TS-2000 is new.

What words of wisdom do you have to offer. How do the numbers on a spec sheet (test results under ideal conditions done by someone hoping for the best) compare with real world use?

73

Some Problem to use a Headset by the HR 2510, by pressing the PTT Key
on the
Mike, there sounds a very strong "PLOPP", it is impossible to use a
Headset, only a external Speaker. Is there anybody there have a
suggestion to fix this
Problem??????? Thanks in advance for any answer!!!!

We are pleased to announce that version 1.0.20 of Log Analyser for
Windows is now available from http://www.acarsonline.co.uk

This release offers support for ZCARS logs and now allows the removal
of duplicate data from the main database.

This is a FREE upgrade.

Thanks,

Mark Avey

This from www.mods.dk

Hope it helps
To extend the receiver and open up 800 MHz receive (cellular blocked) for IC-W32A

Turn off the radio

Press and hold the band and squelch buttons.

Turn on the radio while holding these buttons, wait for 5 seconds before you release the band and squelch buttons.

Now the receiver should be opened up as far as it will go.

It's very possible. I received an Astro Alert in my email this morning. Tthe report indicated that a shock wave was traveling away from the sun at a very high rate of speed, and it was sending out a lot of radio energy. So it is very possible. Might even get a little of that on 2 meters. I've seen it happen before.

Paul.

For the $$ you state and rigs listed, I'd go for the Kenwood 870 assuming you
want to go that high in price, otherwise the TS850.

OZ6OM - OZ50MHz DX Bulletin editor, QRV in Nordic Activity Contest 50 MHz
section Tuesday August 28 th. 17:00 - 21:00 UT.

I will be QRV round 50.173 MHz � QRM, from JO55CE which is on the South/West
side of the Island of Fyn.

Here I'm situated at one of our highest points at 128 Asl. with a formidable
takeoff 360 deg. round the clock.

The rig used is an Icom IC-706 with 100 watt wich gives my 2*5 element
Yagi's more than 1 Kw. erp. This should be sufficient to reach stations
within a range of, at least 600 Km even on flat ConDX.

If You want to file a log showing Your efforts in the NAC there is an open class section. Point 1 point/km, bonus 500 point each WWL.

Log goes to Verner Topsoe, Lundumskovvej 13, DK-8700 Horsens, Denmark.

Hope to see You down the log vy 73 de OZ6OM "Matt"

I was tuning 2 meters last night at around 9:40 local time, and heard something *really* interesting. On 146.775 mHz, which here is a local repeater, there was something called the "International Net". There was a control op that was a V3 call and during the net a VK6 station called in from Western Australia! What was I hearing? Was I hearing unbelievable propagation, or is it something that links repeaters? I heard the net control op say that there will be another one in about 2 weeks.

How does this work? Is it a worldwide system of linked 2 meter repeaters? Would like to know, b/c that was some great DX!

73s,

Jim KG4NEL

since i am not from your area and didnt hear it i can only assume it was a
2 meter repeater that was linked via the internet or HF and you where
hearing it on 2 meters
there is all kinds of that stuff going on now a days and if the band was
open like that i think you would have been hearing much more activity on
all other freqs on 2 meters

One question for all of those who think that us Post-Restructuring Licensees are a "dumbed down" version of hams..... Do you consider everyone of those people as people who just walked in off the street and took the exam? Not every one who has tested under the new testing procedures has a limited knowledge of the concepts..... some of us actually have studied, believe it or not. The fact of the matter is, there are many reasons why certain people have become licensed at the calendar dates that they did. We need to remember, this is a hobby..... (with public service being the retribution for what bands we get to play with) thats it! It has been written many times, ham radio should be an integral part of your life, but not your life. It should not take over and create problems for your employment, family etc. Therefore, some either weren't familiar with amateur radio until after the restructuring or had other obligations. I guess it is a matter of weighing priorities. Since ham radio does not pay my bills, I consider my employment more important. (3 jobs...)

On a side note, I would have been legally licensed back in 1988 had the VE team decided NOT TO MAKE THEIR OWN RULES. I guess they felt their own personal criteria for passing the code test superceeded the FCC's rules. I still have somewhere in a box a stack of sucessful CSCE's for the novice and tech question pools between 1988 and 2000.

One thing, I think they should do is bring back the General, Advanced and Extra Classes as they used to be with the code requirements as they used to be. Make an entry level class of 1 VHF and 1 HF band (10m and 2m for example) with the written test required for both the former novice and the technician both.

Just some thoughts.....

Ryan

Hi Jim
It as probably the IRLP net ,
You can get more info at
http://www.irlp.net/
If you were listening on KD4RAA in Raleigh NC
it is an IRLP Node

We sure could use one of those here in Houston, TX.

There are a few of those around Houston, but the metro area is so large and spread out that a trip to any one of them is almost a major feat in itself.

If any of you HRO guys are reading this email, please note:

We need an HRO store in southwest Houston, TX!

Paul.

I want to solder a bridge from point A to point B on a
handheld device. It's a simple job that will increase
its receiving capacities, and doing it myself will

spare me all of the hassles associated with approaching FCC boot lickers who wouldn't do it anyway.

Problem is, it's a very tight area and I'm a novice. I realize inaccuracy is the kiss of death, so what I need are tips from you seasoned veterans on which type of solder and solder gear I should use, and the correct method of ensuring that I get it where I want it!

Thanks in advance. Is there any doubt we're living in a police state?

With the recent conversation on the restructuring of Amateur Radio, I am relaying a couple of posts on this same subject on two local email reflectors.

Paul.

Here is one exchange:

>It is attitudes like these that will drive Ham Radio into extinction. With
>all of the up and coming wireless technologies being developed there are
>tons of companies who would love to have the spectrum. Usually the
>operators that I hear that are causing problems are "Old Hams". Morse Code
>is an operating mode like so many others, it's time as a required mode is
>over. If operators like it they can use it but should it be required? No.

>As far as the operating procedures go... There should be more of that than
>electrical theory. I've been fortunate to have had a few Elmers that helped

>out. If people don't like the way people are operating, do something...
>Elmer.

Robin,

It is not my intention to belittle anyone's position on Amateur Radio or how they got their license, but merely to present things as they are. I respect other people opinions, but that does not mean that I necessarily agree with them.

Yes, we do need more emphasis on operating procedures, as evidenced on many local repeaters. But because Amateur Radio is a technical hobby, we must not decrease the importance of radio theory. If an operator had to set up an emergency station and had to build it himself, he would need that theory to know how to do it.

As far as Morse Code is concerned, it should be retained and taught. Amateur Radio is basically the only remaining radio class that uses and requires Morse Code. This is one of the things that sets Amateur Radio apart from other license classes.

If we turn our backs on the code, the time will eventually come when no one will know it, and it will fall into the abyss of history as a long-forgotten mode of communication that could have been preserved, if for nothing else, posterity.

73,
Paul L Gray, Jr., N0JAA

And here's another response:

I am in favor of retaining CW as a requirement for use of the HF bands, but maybe not for the same reasons as others.

From what I have seen, CW operation is a lot like writing a story in longhand. For most writers, the result is better than if it is typewritten. If you have to slow down your communication a bit (which is what most of us do when we operate CW), you have a little extra time to think about what you will say next, and you're not wasteful of words.

Of course, the ability of a simple CW transmitter to "get through" when no other amateur mode will work is a little bit amazing to me, and I think that fact alone should be reason enough to keep CW around.

There is one fact that we overlook in our Morse-worship, though. Mr. Morse, in his famous patent #1647, didn't ever intend for operators to send the code manually, nor did he expect them to instantly translate and write down what they heard. His patent describes not just a code, but a text-transmitting and text-receiving system. His system (fully implemented) encoded the characters automatically, transmitted them, and decoded them automatically. If the typewriter had been invented prior to the Telegraph, Morse would have invented *Teletype*.

Tom O'Brien

And yet another response:

TPOBrien@******* wrote:
>
> I am in favor of retaining CW as a requirement for use of the HF bands,
> but maybe not for the same reasons as others.
>
I agree with you that CW should still be available to those that wish to use it.

> Of course, the ability of a simple CW transmitter to "get through" when
> no other amateur mode will work is a little bit amazing to me, and I >
think that fact alone should be reason enough to keep CW around.

Well not total true. There several new technologies that will also "get through" and besides they may even waste less bandwidth. Take PSK31 (HF + 31 cycles) (you didn't mention the required equipment) and/or Spread Spectrum (UHF) with its very low power out and ability to receive beneath the noise floor. Both systems are more complex than a simple transmitter and receiver but so is your simple transmitter when related to a spark gap transmitter.

> There is one fact that we overlook in our Morse-worship, though. Mr.

Interesting!

> If the typewriter had been invented prior to the Telegraph, Morse would
> have invented *Teletype*.

IBM has even stopped supporting typewriters - They have been replaced by computer printers. No more need for "White Out" bottles.

>
> Tom O'Brien

I would say that if CW is to be required that the same level of Digital Technology should also be required.

It is not that they only carry AM. The normal tower to plane frequeicies are from about 110 to 130 mhz AM but the larger planes also have other radio equipment. The over ocean planes have ssb transceivers for the lower frequencies of 3 to 30 mhz. A pilot freind of mine tells of working the onboard transceiver while everyhing is normal at the crusing altitude.

I'll definately agree with you there. I always seem to be able to send faster than I can receive. I never have been able to figure that one out! I must use one side of my brain for sending and the other side for receiving. That's the only thing I can figure.

I've been out of CW for a while, but I want to get back into it. My Morse is a little rusty, so it is time to start practicing.

Paul.

Is this the original 10-meter SSB/CW Uniden transceiver that Radio Shack sold
several years ago?

I wish I had purchased one when I had the opportunity. I heard they were a
good radio.

Actually, this is not on-topic for this NG, but you can tell I am not a pilot,
although I am in the aviation industry. I'll have to read up on the FARs.

So then, how do you deal with it? A pilot can't just make a turn whenever he
wants to if he's in a TRSA, as he might turn into the path of an airliner. A
PIC does not have the advantage of looking at the same radar screen that the
ATC does.

Paul.

```

After checking the ARRL handbooks I have (antenna design, microwave/UHF and the "basic" handbook) and some antenna design books (Balanis), I am still looking for the following information:
how can I compute (evaluate) the inductance of a flat strip inductor (as described for example in p.6.23 of the ARRL Handbook) as a function of the surronding medium. The formula given in the ARRL handbook only depends on the length/width/thickness of the wire, while I experimentally observe that the inductance depends on the permittiviy of the medium around the wire.

In case you are wondering why I am looking for such an information, I am characterizing (and trying to understand the behaviour) of a 500x100 nm, 150 um long, gold strip deposited on silicon dioxyde.

When looking at the impedance between 10 and 20 MHz, I see an important inductance component appear if (and only if) the wire is covered with a high ionic concentration solution (salt solution between 10^{-2} M and 1 M). For pure water, this inductive component does not exist. Hence, I suspect that the inductance calculation should include this ionic concentration (or the relative permittivity change induced by it).

Thank you, Jean-Michel FRIEDT (friedtj@imec.be)

>Would you know what could be done to remedy the malfunction?
>If my diagosis is incorrect, is it possible to reset the unit?
>

Hello Manos,
I have an Icom V21AT HT that had the same problem, I was able to reset the radio by holding the {F} key down while sliding on a charged batterry pack, then turning power on. Dont know if this will work on your particular radio, but it was on the first page of my manual. Apparently the memory backup battery is a rechargable unit that only holds memory a couple of months if the radio hasnt been used. Mine also shows a reset code of holding down {F}, {A clr}, and {*} while turning radio on. Good luck ,

Mike

Airliners do carry SSB as a backup in case their main radios fail. SSB is also used for international flights.

Your quote about not being any old, bold pilots is most true! I don't know who originally uttered it, though.

Paul.

Most simple formulae assume strips to be surrounded by air.
The inductance of the flat strip, if surrounded by a medium of permittivity and permeability different from that of air, will be changed in proportion to the change in characteristic impedance Z0 of the flat strip. If shorter than a quarter wave, the strip (assumed shorted at one end for this) will have an inductance proportional to Z0 times tan (beta l), where (beta l) is the electrical length in degrees. So, since Z0 is proportional to the square root of permeability over permittivity, the inductance will vary according to the square root of the relative permeability over the relative permittivity.
If the strip is not completely surrounded by the medium, i.e. the media are mixed, then you get an effective permeability and permittivity which takes into account the mixture of field patterns in the different media- calculation then gets much more complicated, although well established formulae exist for arrangements such as microstrip, triplate, and various layered compositions.

>I suspect that the inductance calculation should include this ionic
>concentration (or the relative permittivity change induced by it).

Here I assume you terminate a line with a matched load. The transmission line formulae say that the input impedance of the line will be resistive if the load is matched. However, if you load the line with a lossy solution such as salt solution, the characteristic impedance is no longer real, and a matched line will start to show a reactive impedance component. You therefore need to take into account the full complex impedance of the line... simple formulae will do you no good. You might be better off establishing an experimental relationship.

Suggest you refer to a work such as

Hello All.

I am desperate to get the circuit diagram for the KR400. If you can help please e-mail me at zl2bmh@infogen.net.nz

Because of ill health it might take me 2-3 weeks to get back to you.

My home address is Jim Irving
38 Lawry St,
New Plymouth 4601
North Island
New Zealand

Many thanks..Jim.

I still have a few, but I don't really use them too often. I'm getting
too picky about freq stabilty and readout accuracy. Also I get spoiled
not having to tune, and having memories, etc. I've still got a set of
drake twins "4 line" and a drake 2c and 2cq rcvr and speaker /q
multiplier. I've got a solid state ic-730, but it's broke at the
moment.:(I've got a TS-830 and a VFO-230 which is 1982 vintage. The
830 vfo in itself is not that stable, but with the vfo-230 it is very
stable. I usually use my ic-706g as my everyday rig lately. It's
easier to use and it's going to my computer. I haven't been using the
830 that much lately. I'd like to get a 746 or something like that for
the house, but I'm in no rush. I really don't need it for what I do. I
want to find a solid state amp for the 706. About 500w or so. Would
like to find a metron or something along those lines. The drakes
pretty much collect dust these days. But they still work. MK

I have a lot of 10 VHF radios.

Most are 2 channel, 1 watt radios on 154.570 and 151.625.

For all the details and pictures, please visit:
http://www.pmisolutions.net/radios.html

Asking $125.00 for all 10 (thats $12.50 per Radio!) or trade towards a
Yeasu(Vertex) VX 150 complete, or commercial VHF mobile.

Please feel free to ask any questions. References available.

THANKS

I used Code Quick to pass my Element 1 last week. I started using Code
Quick just before New Year's and about 3 wks later I had my General!!

BUT. . .
I also used NuMorse, a Java Applet I got off Arrl.org, AA9PW's Java QSO
generator, and one more QSO package that I forget at the moment. The key is
to do the QSO's in as many different packages as possible to get a wider
variety of styles. The Code Quick QSO generator is cheesy to say the least
(you do 2 QSO's and you get complacent because the pattern is too easy).

Hi there,
Well here may be something to get your mind gong?
I have an old Icom IC-201 VHF transceiver
Frequency coverage 144 to 146MHz (bummer)
I always thought you had 144-148 and Europe 144 to 146 anyway this is an American model.
I wish to somehow add and switch two Xtals so as to be able to use 144 to 148 :)
The only details I can provide (and I do have a circuit diagram for it) is that The IF has 2 xtals 10.698 and 10.7015,,, this is where the 10.7 filter is There is also another board shown,,, FMIF and on the circuit it shows 10.245 but I can see 2 Xtals 15.364 and 15.239 I cannot find these 2 xtals on the circuit.
Well here is a funny one,,, I also have 4 Xtals in the A/B/C/D positions

these are the results!!!!

In A is an Xtal Marked 146.49
Results 144MHz position ,,,,,145MHz position (untested)

```
B 147.18 In 144MHz position 144.880
                   145MHz position 145.880

C 147.63 In 144MHz position 144.920
                   145MHz position 145.920
D 147.30 In 144MHz position 144.890
                   145MHz position 145.890
```

Weird to me
Any ideas on my many questions?
your help and constructive advise is appreciated.
Thanks and best 73's
Martyn

Here in San Diego, several of us including VE's have discussed the matter extensively.
Here are how folks learn the code, depending on how they perceive things -- audible, visual, association, etc. FROM THE BOOK DX101X at URL: http://ac6v.com/DXSAMPLE.htm

There is no one way to learn the code that will work for everyone. Beware of the ham who says �here is a sure fire way to learn the code�. Here are several methods � choose the one that works best for you.

VISUAL -- some learn best by seeing it on a computer screen as they hear it.

AUDIBLE - Musically or language associated- some learn it as a song or word -- dah dah ditit -- The zebra did it. dah dah di dah -- here comes the bride - queen. Code Quick does this with mnemonics.

AUDIBLE - INVERSE - Some study the opposites A then N, K then R, etc.

AUDIBLE PHONETICS - Some learn by associating it with the NATO Alphabet i.e, dit-dah followed by A or ALPHA after a while you will hear dit dah and A or alpha pops into the brain.

PATTERNS -There are patterns in morse code letters. For example: the letter A is similar to the letter W except that the letter W has an additional dah to it. One might study A, W, J, 1 in order, then mixed. This is effective if one has difficulty in discerning J from 1 etc.

TYPING - some find that they have an automatic reflex to hearing a character and hitting the right key on a keyboard. Check with your VEC if they will allow you to take the test this way. One of our local examiners does allow this as well as a Braille keyboard for the blind.

SENDING � Some folks learn better or improve by sending with a key. Others read signs while driving on the highway. This is usually in conjunction with a listening method.

CHARACTERS - at 5 WPM it is feasible to repeat (or count) the dits and dahs in your head and pass the test --- this is the hard way and Farnsworth makes this tough � not recommended but may be the only way for some.

PLAIN TEXT VS MIXED RANDOM CHARACTERS. Studying Morse in plain text gives the advantage of being able to anticipate what is coming next where mixed random characters � ya gotta know them all. Maybe practice both if that works for you.

KOCH METHOD - Learn morse code using high speed random characters.

FARNSWORTH - All tests are soon to be given at 12 WPM character speed, 5 WPM overall speed � if you are tested in Farnsworth -- then study that way -- several who have studied straight 5 WPM - couldn't copy a darn thing in

Farnsworth.

BRAIN SOAK � Some folks give up on methods and just pain listen to code practice until one day it just all comes together. The impediment to increasing speed and proficiency is called a barrier which you may feel you will never hurdle, but is amazing when one day after brain soaking � it magically all comes together. Your mileage may vary.

COMPUTER PROGRAMS AND COURSES - There are many available -- see Morse Programs at URL: http://ac6v.com/morseprograms.htm
and try them out -- choose the one that works the best for you. Remember that the one that works for your buddy or elmer may or may not be the best for you.

Is there radio service software which allows loading memory channels,
etc., on the 706IIG? I use TRX-MGR for control of a Yaesu rig..can
this (or other software) be used as a "programmer" for the 706IIG?
Tnx

Again, I still can't copy someone doing the dah di dah.

I might not phrase it the same way, but I did learn it by sounds.
O.K....So I memorized the 5 WPM, but after that it was only sounds.

Out of all the tests I found the Extra the easiest as I'd learned it like a
language by then. (by then I'd been a ham for a long time <:-))   ) It was
hearing word sounds...Problem was that I had to learn how to spell all over
again and I no longer heard letter sounds.

>
> SENDING - Some folks learn better or improve by sending with a key. Others
read
> signs while driving on the highway. This is usually in conjunction with a

For some, the sending can be a henderance as they can send faster than they
can copy. Others find it to be an aid.

>
> CHARACTERS - at 5 WPM it is feasible to repeat (or count) the dits and
dahs in

>
I have a devil of a time copying the Farnsworth way as it doesn't sound like
it does on the air where the letters, words and spaces are all at the same
speed (with some notable exceptions <G>)

> PLAIN TEXT VS MIXED RANDOM CHARACTERS. Studying Morse in plain text gives
the
> advantage of being able to anticipate what is coming next where mixed
random

> characters - ya gotta know them all. Maybe practice both if that works for you.
>

It's a good way for learning...I think...But not helpful "for me" to get my speed up when copying conversation.
I spent about 3 weeks with the receiver turned up to a comfortable level while working on equipment. If I stretched out on the couch, I'd first tune in a good conversation going just a bit faster than I could copy. One day I realized that it was like listening to some one talking.

> KOCH METHOD - Learn morse code using high speed random characters.

"To me" this would be by far the most difficult method of all.

>
> FARNSWORTH - All tests are soon to be given at 12 WPM character speed, 5 WPM

After running into people transmitting this way, I find I'm learning to despise the code that is sent this way as well as the guy who came up with the method. On the bands it can be very difficult to seperate words when you run into this ... Even when writting it down, you have to go back and seperate the words. Good code that is properly weighted and has the proper spacing between letters and words is much easier to copy.

> overall speed - if you are tested in Farnsworth -- then study that way --
> several who have studied straight 5 WPM - couldn't copy a darn thing in
> Farnsworth.
>
> BRAIN SOAK - Some folks give up on methods and just pain listen to code practice
> until one day it just all comes together. The impediment to increasing speed and

Always heard it called a hurtle <:-))

As you said at the beginning...It varies from person to person.

There are a few on the net. I have 2 or 3 of them that will work. One
is for memory channel banks only, and the others are full blown
control programs. Do a search on yahoo or whatever and it will point
you to a few. IC706MM will do the mem banks. Easycat32l and another
called commander?? can do full control. A friend of mine was working
```

```
on a new control program for the 706's and ft-100's etc, with custom
radio skins and modules for each radio type, but it kinda got put on
the back burner for now. I was doing some of the graphics for it. We
have "skins" for both types of radios. We might get it going one of
these days, but he had to move to a new house, and now he's working on
a new project involving DNA research, so could be a while before it
works. The one we are doing is  "fancier" looking than most I've seen.
Most are kind of ugly. The one we are doing has a picture of the real
radio at the top with working diplays etc like the real radio, with
all the VB controls, keyboard, mem buttons ,  on the bottom half of
the screen. Looks pretty neat, and we have a working dummy for both
the 706 and ft-100, but the coding for control,etc  hasn't been done
yet.  MK

Sure, but you will need a preamp. They sell a preamp for the icoms I
believe.
I made mine. It's a very simple circuit. I used that and an audio
technica mike on my 730 for a long time. The mike circuit on the 730
is the same as the 740.
I now use that same setup on my ic-706.  I could only get about 50%
drive on the 706 with no preamp, so had to use the preamp on it also.

Very sage advice here. It's interesting to hear things come back to me that I thought might've been just me. I learned to copy on a keyboard and then found it challenging to do the same on paper. I passed the test and then found the challenge of recognizing a character without a space to "think" about it. I'm sure I could copy a character at 20wpm or more easily but not without that PAUSE to let it register. I'm sure the elmers out there aren't physically "copying" anything and I'll get there some day to recognize words vice characters. Possibly the most interesting of all is the frustration that the more experienced fellas feel when that PAUSE breaks their concentration.
  After I've passed the test, now I have to clear hurdle of UN-learning bad habits. If I had the chance to do it again, I think I might start slow with normal character spacing and improve my speed 'til I made 7 1/2 - 10 wpm to take the test.
    Drink, WP3JQ

Hi,

I have a long list of tings for sale, please browse the entire list.

900 Mhz

1) I have 2 maxtracs, model number D37MWA5GB7AK. They power up, but have not been moded yet. Both are 16 pin connector radios. I have at least one mic, maybe 2, but no other accessories.

2) I have 2 MTX9000 radios, model number H01WCF4DB5AN. They both have high cap batteries. I have 2 new full keypad and display housing coming for these units, so they will be cosmetically perfect.

3) I have 1 Sinclair Duplexer, model number Q-502D. The freqs currently are set at 953 and 957 mhz.

VHF

4) I have a Henry, VHF amp. I believe the thing puts out 80 watts or so, but I can't find a model number on the unit, and I can't find the manual for it. I am sure that someone can find the appropriate information for it with little trouble.

5) I have a GM300 with remote mount kit. This is a high power mobile, modified for 32 channel operation. This is a 16 pin connector radio, with full signaling capability. The model number is M43GMR29C2AA
UHF

5) I have a full keypad and display MT2000 (might be an MTS2000, as the case states, I just don't have the ability to check right now, and the sticker is missing), 450 to 510 mhz. It comes with a high cap battery as well.

MISC

6) I have a DES KVL, with a battery, in great condition.

7) I have several MX parts, both UHF and VHF. Too numerous to mention all the parts, really.

8) I have an MX, and X-9000 KVL Cable

9) I have a TEK 5F test set. This unit is in excelent to perfect condition, and is perfect for testing Mitreks and other radios. I also have the test cables for the Mitrek and Syntor series of radios.

10) I have a Secom 11, 11 amp power supply, prefect for a mid power mobile radio.

11) I have a 35 amp Astron RS35M. The unit is in perfect condition, hardly used, with the front mounted Volt and Amp meter.

12) I have a Clamshell control head and cable for a syntor X, modified for 32 channel operation, and scan.

Well, there is the list. Please make reasonable offers, I would hate to have to retype this thing with suggested prices. All prices will include shipping, but please realize that some items are quite heavy, and may be quite expensive to ship. If you are interested, and must see a picture of the item, let me know. I have a crappy webcam, but at least I can get you a reasonable picture.

Thanx
Mike

I have a lot of 10 VHF radios.

Most are 2 channel, 1 watt radios on 154.570 and 151.625.

For all the details and pictures, please visit:
http://www.pmisolutions.net/radios.html

Asking $125.00 for all 10 (thats $12.50 per Radio!) or trade towards a
Yeasu(Vertex) VX 150 complete, or commercial VHF mobile.

Please feel free to ask any questions. References available.

THANKS

-Peter

Here we have another spammer. It misleads
in the subject line by saying this item
is FS "OR" For Sale "OR" misleads and
indicates said item is for sale when it
is actually FA = For Auction. The FA is
used by those of us that do not Do Auctions.
We set our spam filters for FA in the subject
line and we do NOT have to see the auction
spam. Do not trust this person.

"If they Lie in the subject line"
They will have no problem misrepresenting
the JUNK they have at the Auction..
```

If you have received this message it is
because I saw a subject line that interested
me and when I downloaded the message
It was nothing more than your auction SPAM
and was NOT what the subject line said it was.

Some of the Real Sleazy people will make
it look like a reply to another message.

Easiest way to avoid this message?
Do NOT LIE in the subject line..

Just My Opinion..

Bob

I was interested in Buying it NOT Bidding on it. It said
FS. = For Sale.. If it had CORRECTLY IDENTIFIED
ITSELF IN THE SUBJECT LINE, AS An "FA" I WOULD
NOT HAVE DOWNLOADED THE MESSAGE. You dumb F***.

Like it say's

If you have received this message it is
because I saw a subject line that interested
me and when I downloaded the message
It was nothing more than your auction SPAM
and was NOT what the subject line said it was.

Now F.O.A.D.

Just my opinion..

Bob

Yaesu FT 1000D Excellent condition with original manual and carton. Make me a fair market value offer. Remember what you would pay if you purchased this new. Anything I feel to be an insult will not warrant a response. I am located on Long Island and prefer not to ship.

I suppose you'd rather protest than actually buy anything, but in case you are actually trying to buy, I happen to have a extra TS440S/AT that I'd be willing to sell.   A civil email would elicit more information.

Here we have another spammer. It misleads
in the subject line by saying this item
is FS "OR" For Sale "OR" misleads and
indicates said item is for sale when it
is actually FA = For Auction. The FA is
used by those of us that do not Do Auctions.
We set our spam filters for FA in the subject
line and we do NOT have to see the auction
spam. Do not trust this person.

"If they Lie in the subject line"
They will have no problem misrepresenting
the JUNK they have at the Auction..

If you have received this message it is
because I saw a subject line that interested
me and when I downloaded the message
It was nothing more than your auction SPAM
and was NOT what the subject line said it was.

Some of the Real Sleazy people will make
it look like a reply to another message.

Easiest way to avoid this message?
Do NOT LIE in the subject line..

Just My Opinion..

Bob

Well, my opinion is that he said for sale. For auction is still for sale. The item is for sale, how it is sold, by direct cash, by check by mail, by auction or by barter is a moot point.

Unless, of course, one wants to be a netcop.

Bob

Richard and the group:

Much of the garbage you're hearing is simply splatter from grossly overmodulated radios running into non-linear amplifiers, and there is nothing you can do about it, except get as far away from it as you can.

I also have a 706MKIIG, and I have noticed that I hear images of the CB channels when the pre-amp is in, and I believe it's a result of intermod, mixing 27 MHz signals with incoming signals from near-by AM broadcast stations. It's especially noticeable here in Petaluma above 28.455, which is 26.965 (CB Ch 1) mixing with 1490 kHz, a local AM station. They disappear when the pre-amp is switched out, and I don't hear the signals on my TS-870 or KWM-380. In your case, you're right across the SF Bay from high-power AM's on 910, 960, 1010 and 1310, and farther down there is 680 and 810 and 1100, all of which have monster signals across the salt-water to the Marina (well--brackish water, but it's about the same!). The intermod possibilities are endless!

Your best bet to get rid of the intermod is to put an antenna tuner in line with your antenna for some extra front-end selectivity, or keep the pre-amp switched out. Another simple fix might be to build a filter out of a half-wave of shorted coax into a "T" connector, tuned for 27 MHz. That would be around 12 feet of coax with VF=.66, but you'll need to tune it with a meter for best results.

Hi:

I have a Kenwood TM-742a with 6m/2m/70cm and the TSU-7 decoder. It is in excellent condition. Original box, DTMF mike, mounting bracket, manual, and power cord.

$675.00 including insured shipping.

Would also consider trading it and some cash for TS-570S(G), Icom 746, 756, or 756 Pro.

Hi people. I need some help on the following:

I have an ICOM IC-2SE VHF handheld transceiver with a BP-82 battery pack and a FA-140BB antenna. The unit has been left unused for a number of years, and it now refuses to function (or should I say "boot"?). No indication appears on the LCD screen, and no sound is heard from the speaker.

As it is a digitally controlled unit, I was wondering if it could be a matter of it losing its embedded control code, due to the long period of rest and lack of power supply to its electronics (roughly two and a half, to three years). I had tried to use it in the past, and had noticed that the LCD display was weaning and the memory settings were -if memory serves- lost.

Have any of you encountered, or heard of such a problem before?
Would you know what could be done to remedy the malfunction?
If my diagosis is incorrect, is it possible to reset the unit?

I would be greatfull for any help or suggestion. It is a lovely little thing
and I would hate losing it.
I could also use any URL link you may know on the subject of ICOM IC-2SEs.

TIA
Manos Petridis

I'm not sure I'm thinking of the right model and if I am it's been
some years since I played with one of those. Hasn't it got a NiMH
cell inside to keep the settings ? Have you tried replacing it?

!I have a lot of 10 VHF radios.

Most are 2 channel, 1 watt radios on 154.570 and 151.625.

For all the details and pictures, please visit:
http://www.pmisolutions.net/radios.html

Asking $125.00 for all 10 or trade towards a Yeasu(Vertex) VX 150, or commercial VHF mobile.

Please feel free to ask any questions. References available.

THANKS

-Peter

Most likely the problem is the battery (probably lithium) that backs up the radio's memory and functions is dead. You'll have to replace this battery and then take it to an Icom dealer or repair station and have the radio reprogrammed.

Not using radio for two years in and of itself should not cause the programming to be lost unless there was a problem with the radio before it was stored.

Paul.

I am not by ANY means a computer expert! But I see no reason why you should npt be able to dial up a local BBS to do what you are proposing. I am assuming that the processor is probably 4 MHz and you have a 2400 or 4800 baud modem.

It would have to be an actual, dedicated BBS in the classic sense. You probably would not be able to connect to a BBS running Worldgroup unless you have at least 1 meg of memory and a 4800 or 9600 baud modem.

Paul.

Dial up a local BBS? Are there any of these left? I thought they disapeared when the internet came to the masses.

Has anybody got or know where i can get some software to run on my
IPAQ PocketPC, i am after a morse trainer preferebly rsgb format, I
used MRX befoer and was good but now i have a IPAQ it would be great
on the train and wandering around..

Thanks

Yeah yeah ... uh-huh. Restructuring "dumbed down" ham radio ... the loss of the code requirement dumbed down ham radio ... now anyone can memorize the question pool (over 900 questions ... no small memory feat!) and pass a test, huh?

Yeah, I just passed my Extra exam three weeks ago and now I'm an "Extra Lite," huh?

Interesting.

A good friend of mine upgraded from General to Advanced in 1984. Many of the hams back then gave him hell because he used the "Dick Bash books." Anyone remember those? They were among the first books to come out that PUBLISHED the question pools. Using them labeled you as someone who would read the Cliffs Notes to pass a literature exam.

My buddy didn't have to do anything but memorize a question pool in a book to move from General to Extra 17 years ago. I think this "dumbing down" has been going on since before some of the "expert hams" around here were licensed.

Epitaph ... My friend, still an advanced, let his call expire three years ago. If anyone wants KD4YY as a vanity call, it's available ...

Andrew:

It's nice to see someone still using the old-but-good stuff. I don't have a lot of extra spending money right now (just had a baby, wife's at home now) ... but if I ever do, I want to buy a Yaesu FRG-7 and a Kenwood 520 to sit right next to my Icom 746. There's just something about the classic stuff ... maybe I just miss the orange glow and the ozone!!!

73,

Meade KA4RQB

P.S. The above should answer the question, but no, I don't have a single-band 10 meter rig, nor would I buy anything made by Ranger, 4-10 and roger that good buddy. <BEEP!>

If you are in the ham bands it is ok if you are both licened. I assume you mean on the FAA frequeicies. To do this the transmitter would have to be approved which it isn't. While many ham transceivers can be modified to transmitt outside the ham bands they are not legal to use in most cases. I think and only think that if you have a MARS license you can use them on the mars frequencies. That is the only place I know they may be legal. Also think the airplane radio is AM and doubt the Icom can be modified to transmitt AM.

Thanks, I didn't realize the aircraft radio was AM.

Post something once in a while and maybe it would be better!!!!!!
I just sent 3 posts thru last night and when I get thru going thru the
box of vintage manuals I picked up, I will post that list as well.

Have a Nice Day!!!!

Make sure you have a good battery on it and then reset the cpu. The memory
back up battery is a rechargeable Lithium battery. That memory battery dies

in about 7 days if no external battery is being applied. The cpu then stops
in some undefined state and doing the reset should power up the radio again.

>radio

For 10m I use just my Radio Shack HTX-10. I have it feeding its own ant. (an
Antron 99 cut for the upper portion of 10m)
I like to use that radio for 10m because it gives me all the modes including FM
for working the repeaters. I live in Wa. state and have reached the east coast
repeaters when the band is open. All my other "HF" gear consists of older Yaesu
stuff, I.E. Yaesu FT101Z (20m) and Yaesu FT101EE that I use for 40m and
sometimes 15meters.

Just curious, but how many of you out there are still using "older" radio's
as opposed to the new, all digital etc etc stuff on the market today?
For HF work I am using a Yaesu FT101Z (20m-15M) and an FT101EE for 40m. The
audio on these older radio's is great. True, it is a little more work tuning
them up - but to me, thats half the fun.

Oh, well. Can't always be lucky! I'll have to wait for that rare E-layer opening or the ducting that we get here in TX during the summer.

Paul.

Jane,

I hope you will reconsider your decision and give the NG at least one more
chance. There are a few of us "boring old farts" on here that are at least
halfway decent. Yes, it is unfortunate that there are people who will disrupt
the NGs merely for the sake of doing so. To paraphrase a quote by Henry Ford,
"Disrupters, like the poor, will always be with us."

Paul.

Bill,

No, you would not be able to do that unless you had an aircraft communications license. And no, you would not be able to do that with your ICW32A, even if it COULD be modified, because it is not type accepted for two-way operation on the aircraft band.

The only way you could legally do that, Bill, is if your pilot buddy is also an Amateur Radio Operator, and you gave him his instructions on the ham radio bands.

In any event, ham radio or no, the air traffic controller has the final say in what the pilot must do when in the air unless that pilot is flying outside a radar control area under VFR rules.

Paul.

>someone who would read the Cliffs Notes to pass a literature exam.
>

I must agree with the "dumbing down" approach, although somewhat guardedly. As you say, anyone can memorize answers to a question. But learning why an answer is what it is requires more work.

What the FCC should have done was make the license exams more like the GROL test, where knowing why the answer is what it is gives you an edge in passing the exam.

Now, Amateur Radio is fast becoming the test-required citizens band. Doesn't anyone teach proper operating procedures anymore? Whatever happened to having a group discussion on a repeater instead of operators trying to talk over each other?

Sure, we provide emergency communications, and this is a noble effort. But the lack of proper operating skills negates that to the nth degree. An outsider who hears several operators trying to transmit at once is going to think that he is listening to CB radio.

Restructuring is not, in and of itself, the answer. Teaching and learning proper operating skills is. Keeping Morse Code alive and well is also the answer.

Paul.

Excuse Me BUT according to MY copy of the FAR the VFR
"Piolet in command" has control of his plane as long as it is
Airborn.. even when in a TRSA following directions of a

controller, the PIC calls the ball..

Just My Interpertation of the FARs..

First, my CW (copy speed, not sending) has eroded and it bugs me when I'm helping someone else learn CW:(My own interest in CW is on the upswing again, though:) I know many are thinking, "Well, start some QSO's & get back into it" but I'm kinda thinking about more than just myself.

I and others I've been helping could've worked the "Slow FISTS" nets, working other hams at their own speed and spinning off from there, but, the slow fist nets appear defunct (maybe I just can't hear them from the Carribean or maybe they've "graduated";). So what's a guy to do?

I know some fellow hams don't like nets or want to do away with code requirements. But, "to each his own" because those aren't the issues here.

Are there any known Slow speed CW nets where folks can get regular, practical CW experience (I don't want to repaint the wheel:) or should I just sit on a freq calling for hours every night 'til the slow fists come out of the shadows to feed?

I am selling BRAND NEW LCD display modules, made by Data Vision. Documentation included.

I have over $25 invested in EACH ONE of these.

$5 each (minimum 5, please)

I bought HUNDREDS of these for a project that I have decided to abandon (no more time), and I want to sell them ALL immediately. Offers encouraged for large quantities, OR the entire lot.

I have a partially dismantled Hickok 539A (it's NOT MY FAULT, I BOUGHT it in this condition) that I want to sell. Transformers, sockets, switches, etc., are still intact. If you need REPLACEMENT PARTS, this would be an EXCELLENT investment.

Picture available at;
http://members.aol.com/ecc81/yardsale

Asking $50, will consider trading for saddle mount compactron sockets.

Please respond BY EMAIL to < OvrReactor@aol.com > if interested.

i'm 16 yaers old. i just got my scanner about 2 weeks ago but already have heard lots of police, fire and ems stuff. im looking for more. i have spent about the last week looking for different frequencies in my area(wichita). Yet i cant seem to find any. my main search area is school buses and the local mall security. i would also like to find other security freqs. for hotels and such. again i have looked diligently and have come up with almost nothing except for cordless phones(which is very cool in my opnion) any way my e-mail is flipteam15@hotmail.com so either send all your good info there or post it, PLEASE. also lemme know if you live in wichita and have a scanner, we can share local info and maybe even become good friends. Who knows.

thanks for any info
Evan

Anxiously waiting for the Fall European propagation on 10.

10 meter propagation this fall should be at a peak.

Since Fall 1998, have been using a 10 meter single band xcvr running 5 watts on 28720khz for QSO's with G0EHQ, G0OUF, G0MJY AND G0BIR IN THE

FALL AND SPRING ON A DAILY WEEK DAY SCHEDULE IN THE AM CST. Some of
the past QSO's have lasted well over 2 hours!

A good antenna helps!

The antenna I use is shown on WWW.GOPHERLINK.COM

Yes, this is true, BUT... if the ATC gives you a directive, you must follow
it. When the PIC contacts the ATC, he is handing over command of his aircraft
to the ATC.

Paul.

I was just given an operational Tempo One that I am preparing to install into my ham station. I had a Drake TR-3 for a number of years. That was a very good transciever.

One more thing.I seem to remember.there are 3 contacts on the bottom of the radio there is a "-", "+", and " e" terminals. The " e " is used for recharging. So long as there is no power cord attached to the top of the radio you should be able to measure a dead short between the " - " & " e " terminals. If it is open then the most likely trouble is the DC jack shorting switch is open and you will need to replace the DC jack. It should however work for direct DC once you reset it. Lastly there could be a problem with some diodes on the PRT unit with in the radio.

Gary K8IZ

Actually the pilot has final authority. The FARs even say explicitly that
the pilot is authorized to deviate from any ATC instruction or FAA
regulation for emergency purposes. Control is never handed over to ATC.

...You are both correct. ATC gives the PIC (both VFR Flight Following, and IFR pilots) instructions to provide adequate separation of aircraft. In an unusual event (emergency) the PIC is exactly that... pilot in command... and makes the decisions to deviate if necessaary. However, the original question was about using a ham radio handheld to communicate with a general aviation pilot to give instructions. I can't imagine what kind of instructions would be given from the ground... typically the pilot has an instructor sitting in the right seat. Possibly, training in a one-seater might have need for a radio, but many pilots I know have a handheld transciever for the aviation frequencies for use as a backup in the cockpit. Aviation to aviation... or Ham to Ham..... that's my 2 cents worth.

Drink ...

I felt my speed going too ... but I was off the air for about 5 years! :-) But to get it back, I've put a little portable HF rig in my car. Each day to and from work, I'm tuning in to cw and just sitting back copying in my head. If I run into somebody cool, I'll pull over and try to hit them up for a qsl card, but that has only happened twice in the last 6 months. I'm amazed at my "cw reading" speed coming back. And the having to listen instead of write it down is what is really helping me ... I'm starting to hear the "words" again instead of the individual letters.

I'm convinced that the key to cw is not sending, but reading it. If you practice that side, the sending side is automatic. You're talking with a guy who has his 30 wpm certificate.

You can get some fairly cheap hf rigs for a car. Also it make s the time go by faster during the drive.

Best
Doug

  Yep, sure you're right & I agree:)  If you need to talk to a student (like
during a solo TKO, circle the field & land), I think the most correct answer
is to get a handheld made for the AM airband like the one you have and you
can chat on a secondary freq like 123.45 (of course, I don't imply
contradiction of ATC instruction or FCC/FAA requirement for liscensing).  If
it's an uncontrolled airfield, you'll be making your announcements & chat on
the airfield freq and probably won't have any other pilots to compete for
the airwaves, which is probably the smartest, safest, most effective
scenario since all air traffic in the vicinity of the airfield completely
understand what's occuring.

    Drink.

Has anyone ever had a FT-8500 just go dead when ever you keyed up with 10 or

50 watts. The screen goes blank and want come back on until I power it back
up. I dont have any problem at 5 watts. If anyone can help please email me
at n4dog@qsl.net as I dont always look at the newsgroups.
Thanks
Marshall N4DOG

Poor voltage supply or bad grounding. check voltage at the radio during keydown
even at low power you probably will see voltage sag below 12 volts. Check for
corrosion where the battery leads connect.

Due to the difference in sales tax between Mass (5%) and NH (0%), many stores which sell big ticket items have locations in southern NH, and not Mass. If they have a retail location in Mass, they have to charge and pass along the Mass sales tax, even on mail orders.

HRO in Salem NH is the closest to Boston that I am aware of, about 45 minutes north of the city. I've had good experiences there.

You-Do-It Electronics is a general electronics supplier, with lots of useful tools and parts and consumer electronics. Not always the cheapest, but they stock many things of use to hams. They are off of Highland Ave, exit 19A of Rt 95/128. My exit is 19B, so I find them quite handy.

Happy trails,
Gary (net.yogi.bear)

Lets face it. restructuring is here to stay, it is not going to go away. For all those hams that cry about the “Dumbing down” (Their words) of ham radio. Get over it, the world of Amateur Radio is changing. After WERK 2003 it is more likely than not that CW will be gone as a requirement for HF privileges. Evan the ARRL is not going to oppose CW as a requirement at WERK 2003. Of course the ARRL want’s the FCC to maintain the 5 wpm requirement for US hams. I have seen posted in the New Group an opinion that new people are getting into ham radio, but in small numbers. This may be true, but from what I have seen, these new hams are all over 40, and in most cases over 50. With new blood we should be looking at recruiting younger people, by younger I mean under 12 years of age. The club I am member of has over 120 members, Only about a dozen are under 50, of these only 3 are under 21. Of course our club recently started seeking out younger people a short time ago, some thing more club should do. As the OLD Guard dies off in the 10 0r 20 years we will see a very large drop in the number of hams. To

bring people
into ham radio we are competing with the internet and cell phones. Most people do not
realize that cell phones will not work in a large disaster, we have seen this happen in the
past. Instead of complaining about restructuring, get off your buts and get into the
community and recruit new people into ham radio. The ARRL can only do so much.
Every club in the United States should participate in events like KIDS DAY, of course it
would be nice if the ARRL would make it easy to find the KIDS DAY info the ARRL
web site, I new it was there but it took almost and hour to find it (The ARRL needs a new
webmaster). Our club participated in KIDS DAY last June and got a great response.
Another place to recruit is the Boy Scouts, contact your local Boy Scout Council
regarding their Venturing program. This is a program for all youth 14 through 20 years of
age, male or female. My club is in the process of setting just a program, it is not easy,
but not everything in life is. For all those hams that can not live with restructuring for
their selfish reasons, take up stamp or coin collecting, Amateur radio does not need you
as representatives of this hobby.

Well, I don't have any first-hand experience with this, but it seems to me tht Premier (owner of the Cherokee and Pryme brands) are wanting to get out of the CB and Amateur Radio business altogether and concentrate on the FRS side of the business. They probably think they can make more money there than they can on the other sides.

I have one of these radios and it works pretty good. I am using it as a mobile, connected to a Radio Shack half-wave glass mount antenna.

My question: the specs in the manual say the 70-cm side will receive to 470 MHz, yet currently it will not receive past 453.500 MHz. I know there is a key sequence to modify this, but it is not in the manual. Does anyone know this key sequence?

Thanks and 73,
Paul N0JAA

FT: Computer gear for HF Rig / equipment 1

I have the following computer gear available for trade or sale on a "newer" HF rig and equipment. Specifically interested in the below units but open for other suggestions. I am workable, will put money into it if your gear is worth more.

* Kenwood TS-50, TS-840, TS-847, TS-900
* Yaesu FT-100, FT-840, FT-900, FT-847
* Icom IC-706 / 706 MKII / 706 MKII-G
* Alinco DX-70 / DX-77
* or ??

What I've got.

// Compaq Deskpro Server
400 MHZ, 128 MB Ram, CD-ROM, 8GB HD, 10/100 NIC, AGP Video, Mouse + Keyboard,
Windows 2000 Professional. Tower case.More ram is available.

// Compaq Deskpro Desktop
350MHZ, 128 MB Ram, CD-ROM, 5 GB SCSI-2 HD, 10/100 NIC, Adaptec Ultra Wide SCSI Card, AGP Video, Mouse + Keyboard, Windows 2000 Professional. More ram is available. Desktop case

// Compaq Deskpro Desktop
350MHZ, 128 MB Ram, CD-ROM, 6 GB HD, 10/100 NIC, AGP Video, Mouse + Keyboard,
Windows 2000 Professional. More ram is available. Desktop case.

// Compaq Deskpro Desktop - Small Form Factor
466MHZ, 128 MB Ram, 8 GB HD, 10/100 NIC, AGP Video, Mouse + Keyboard, Windows 2000 Professional. More ram is available. Small form factor case, very small footprint.

// Sun SparcSERVER 10 - Unix
50-MHZ RISC processor, 96 MB Ram, 4 GB Hard SCSI Drive, CG 6 Color frame buffer, On-board fast SCSI controller, On-board 10-100 base T Ethernet, On-board sound, additional fast SCSI controller, additional 10-100 base T Ethernet controller, Mouse + Keyboard. Excellent webserver, file server and strong Unix operating system. Machine is running Sun Solaris (preferred) or any flavor of Linux ported for the Sparc platform. Aurora case.

// Sun SparcSTATION 5 - Unix
70-MHZ RISC processor, 64 MB Ram, 2 GB Hard SCSI Drive, CG 6 Color frame buffer, On-board fast SCSI controller, On-board 10-100 base T Ethernet, On-board Sound, additional fast SCSI controller, additional 10-100 base T Ethernet controller, Mouse + Keyboard. Excellent webserver, file server and strong Unix operating system. Machine is running Sun Solaris (preferred) or any flavor of Linux ported for the Sparc platform. Aurora case.

// Hewlett Packard Rack Mount Network Hubs
4 available, 2 14 port and 2 15 port hubs. All are in excellent condition and recently removed from service. These are rack mount servers.

// Proxima LightBook LB20 DeskTop Projector
SVGA and RCA inputs, 200 ANSI lumens, Serial jack, Computer in jack, Monitor out jack, Video in jack, Audio in & out, TV output, Twin Lamp, True SVGA compatibility (800 x 600), International power supply, LightBoard drawing tool, Remote control, Lightweight (11 pounds - 13.5 x 9.25 x 5 inches), Custom padded case. This unit is in excellent condition and includes all the original equipment (cables + books).

If you see something you like, please let me know. I am open to trades or sales on any of the machines. Willing to trade multiple machines for the right gear. Response via Email is preferred.

Sales always welcome ...

Thank you!

opps. I should have typed wrc. sorry about that, I have to stop staying out until 3AM after going out and helping with communications on a 100 mile bike ride. How this for a ham radio function, public service, what a concept.

Hello there,

I have an Azden PCS-4000 2 Meter radio for auction on Ebay. Includes microphone, power lead, and a copy of the manual, service guide and schematics.

Item # 1266595809

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?MfcISAPICommand=ViewItem&item=12665
95809

Thanks for looking,

Richard
(Note: if replying via email, please remove the "NOSPAM" from my email
address).

Can anyone recommend a morse code reader that I could hook up to my
straight-key and keyer so that I can practice and make sure I'm getting my
spacing and lengths right?

I see that MFJ makes a reader, are there others?

If yu can get to the sound output you may be able to use some of the free softwear that uses the sound card to read the code. Maybe you can just place the computer mic next to the sound source. Look here for some softwear.

rec.radio.amateur:2029

Bonjour,

Un radioamateur (personne d�tenant une licence du m�me nom apr�s avoir pass� avec succ�s un examen) :

- ne peut communiquer qu'avec un autre radioamateur sur les bandes de fr�quences r�serv�es � cet usage.

- ne peut avoir de conversations priv�es, seuls des messages ayant trait aux essais de communications sont autoris�s.

Vous avez d'autres solutions pour discuter avec votre ami sans contrainte et ailleurs que sur les bandes radioamateur :
- le t�l�phone.
- le fax.
- la CB, dans des conditions la plupart du temps ill�gales.

Cordialement,
Francis
F6AWN

I built a Microcraft Code Star from a kit several years ago and have been
well pleased. They were advertised in QST. I don't know if they are still
being sold, but if not, you might be able to pick one up at a swipe meet.

I'm interested in working HF and would like some advice on which HF rig to get. While the rig would be used primarily at home, I'd like to use it for Field Day and would like it to take up only a small amount of space. So I'm considering a mobile rig but I'd still consider a base station.

Would someone give some advice on which rigs to consider - there are a lot of them out there (Icom, Yaesu, Kenwood, Alinco).

My next HF rig will be a Ten-Tec Scout.

That depends on a lot of things, including your personal preferences. How much money are you willing to spend? What features would you like? How much power to you want to run? Is your primary interest in CW, SSB, or Digital? Do you want to use it mobile? Do you want to use it portable? Are you into contesting?

Basically, all of the major mfgs (Icom, Kenwood, Yaesu, and Ten Tec) make rigs which are reasonably compariable for a similar amount of money (i.e. comparing apples to apples).

If you are interested in a quality HF rig kit, take a look at the Elecraft Web page (http://www.elecraft.com).

I went through this a couple of years ago and bought a Kenwood TS-870. I have not regretted it. Well- maybe a little- I thought about an FT-1000 too.

For its capabilities is is reasonably compact; big enough to have real knobs, but not huge. It has effective i-f DSP, albiet with some i-f blowthrough with huge adjacent signals. Hetrodyne reduction is fantistic. The noise blanker is just so-so, however the DSP noise reduction is pretty good.

The transmit audio is great and capabile of considerable tailoring. The speech processor is of the split-band type a works _very_ well.

While I'm not a big CW man, the rig has a built-in keyer with four message memories and all of the adjustments you could ask for.

Plus there are all of the other features expected in a contemporary rig: built in antenna tuner, fully computer controllable, lots of memories, scanning capability, AM, FM, CW, SSB, PSK, DC to daylight receive capability....

While I have not taken this mobile (I think its slightly too large for my Camaro SS <g>, I did take it traveling in my travel trailer and operated portable for three months and it worked dandy. While on last year's trip I worked FD in 5W-battery powered class just by turning down the power control.

This is like asking someone which car is right for you. I'm not trying to be mean-sounding, but an expenditure of a thousand dollars or more really shouldn't be left up to others' recommendations. Decide on your price range and then visit a dealer who will let you test drive the radios in that price range. Ask their opinions -- they'll be able to demonstrate them to you right there. I did that when I was in the market for a rig to replace my Kenwood TS-570D after a lightning strike in June. I drove the 100 miles to my nearest dealer, which happened to be Ham Radio Outlet in Woodbridge, Virginia. They let me sit down and play with a TS-570SG, IC-746 and FT-920 for two hours, answering my questions as I came up with them. (I took home the IC-746.)

Really -- the only answers you're going to get here will be biased toward whichever rig the respondent happens to own. Start with a clean slate and make your own opinions. If you'd still like to read people's opinions without starting the war that sometimes starts in these newsgroups, go to eham.net and check out the extensive owner reviews of many, many HF rigs ... past and present.

You don't mention a price range, but I'd go with the Icom Pro. Once you use the built in filtering capability and use the spectrum scope to find signals (or open band areas) you won't want to give it up.

As far as comparisons, I've had almost all of the top of the line rigs - 850, 870, 950, 1000D, 1000MP, Pegasus, plus many more, and consider the Pro to be the best of the bunch. I trade gear quite a bit (I like trying new equipment) but the Pro has a permanent place in my shack.

It's a great radio, and they're down to about $2400 now if you can catch one still on sale.

HTH -

John

Hmmm. As someone who just offered an opinion, I must respond to the obvious contradiction in your post.

You say in one breath, "an expenditure of a thousand dollars or more really shouldn't be left up to others' recommendations" and in the next, "visit a dealer who will let you test drive the radios in that price range. _Ask their opinions_."

So a dealer that probably has a "preferred" radio that has a bigger markup or a special incentive is more "objective" than a guy that went through a significant evaluation process before making a similar choice and proffers same?

|
|Really -- the only answers you're going to get here will be biased

Aha, "owner reviews" on eham are less biased than "answers from people that own a particular rig" are in this newsgroup.

There have been many useful rigs made since the 80's
that will fill the bill for your base/mobile/portable ops.

Later when you're rich you can buy one of the new wet dream radios. Icom/Yaesu/Kenwood all make very nice high end radios, but short of that there are several models from various manufacturers in the mid price range that have their own following. One thing that bothers me about a great many of the new mobile rigs, is the tuning rate that seems to be either too fast or too slow for my taste, even with all the busy selections to be made.

You would be well off to visit hams in your area to get some hands-on. There are no perfect radios and a few to avoid, but mostly all can be pressed into service. All seem to need some ingenuity on your part to get the most of.

This is an exciting aspect of building your own personal station!

There is half a zillion that would do the job. I guess it boils down
to how much money you want to spend. If you stick HF only, you can get
by pretty cheap.
If you add VHF/UHF a bit more. All the above that you mention make
suitable rigs for your purpose. I bought a IC-706mk2G a few months ago
for 900$ new. It's HF, VHF, UHF, in one very small box. For the price,
it's hard to beat for what all it will do. But you might not want to
spend that much. If all you want is HF, you can spend about half that,
or maybe a little more , and get a decent rig. Also many good used
rigs that would do the job for a lower price. I'd decide how much you
want to cough up and go from there. MK

I have had nothing but good experiences with HRO in
Anaheim (near Disneyland) for 25 years. They have never
hindered me in my test drives or selection process. Nor
have they ever made suggestions that were way off the
mark. Most of their motivation in their suggestions is to
avoid unhappy customers.

Take a look at the Alinco DX-70:

http://www.alinco.com/usa.html

It's a 160M thru 6M mobile/base rig, with SSB/CW/FM/AM capabilities. It's a simple rig, but still includes everything you really need. The DX-70 is the base model (100W HF, 10W 6M), without the tone encoder. The DX-70T is the base model with the tone encoder, and the DX-70TH is the high power model, with 100W on 6M.

I just purchased a used DX-70T $400 and am quite happy with it.

Meade is exactly right on.

If you really have difficulty making up your mind, here's a suggestion:
Make the best choice you can based on what you know and buy a USED one.
If it turns out you really don't like it, you should be able to sell it
for little or no loss. Maybe even a gain. :-)

Then if you decide you really, really like it and want a brand new one,
you can get it without taking the potential loss if you didn't like it.

Having said that, my recommendation (what I have, of course) is a TS870S
for home use, an FT-100D for HF mobile and an FT-2600 for 2m mobile.
All great rigs.

Have fun!

Well, Angelo, if you ask 5 hams for an opinion on a subject like that,
you are sure to get at least 6 different answers.

For me, after seeing the problems I might have before, during, and after
a hurricane, the decision was easy: EVERY rig I have operates on battery
power. No matter that I might use an external power supply in the good

times, when things go all to hell, I can hook up to any available
battery and keep on trucking.

I can't compare different rigs very well since I have never had other
than Ten-Tec. Starting with the Century and up to the Corsair II and
finally the Omni VI+, all have worked well and trouble free. Sure, they
are bulky compared to the Icom, Kenwood, and Yaesu, for instance, but
I'm willing to pay that price, even in a motorhome.

I meant to add that one very important consideration for an HF mobile
rig IMO, is a detachable faceplate such as the FT-100D has. Icom also

makes one. I've had lots of HF mobiles over the years, and the
detachable faceplate is an absolute blessing.

Out of curiosity, why the separate 2m rig? Personal preference, or is there something the 100D lacks for VHF?

I am in the market for a new/like new Yaesu (Vertex) VX 150 2m HT.

Unit must include all original accessories and be in good/mint condition.

Would be ideal if the mod for ext TX/RX has been completed.

Please reply via private e-mail.

THANKS

-Peter

I have two separate installations. No, the 100D is not lacking at all
for VHF. A fine VHF rig.

Ok, maybe one teensy gripe about the 100D. The memory scan rate is a
bit slow compared to the 2600. It scans about 5 channels/second where
the 2600 is so fast it's almost a blur. I've been all through the
manual looking for a speedup, but no luck. If anyone knows of one, I'd
appreciate the info.

My first HF rig was a Kenwood TS-820. It was a good rig, although mine did not have the digital frequency readout. That would be a good starter rig, I think. I have seen them advertised in the $300 - 400 range. Probably will be slightly higher with the digital readout.

Off topic, but FYI for anyone planning to be in Houston this weekend.

Paul, N0JAA

JOHNSON SPACE CENTER HOSTS OPEN HOUSE AUGUST 25

The gates to NASA’s Johnson Space Center will open to the public this Saturday, Aug. 25, for the center’s sixth annual Open House event. Open House is the one day each year visitors are invited to a behind-the-scenes look in more than 19 buildings that house the people, exhibits and hardware that serve as the nation’s human space flight center.

Open House runs from 9 a.m. to 5 p.m. and is free to the public. Visitors may enter the site through four gates: the main gate at Saturn Lane, Space Center Boulevard near Bay Area Boulevard, Space Center Boulevard near NASA Road 1 and NASA Road 1. Parking in JSC lots is available at no charge. For a small fee, convenient METRO shuttles will pick up and return Open House guests to the METRO Bay Area Park and Ride on Bay Area Boulevard in Clear Lake or to Baybrook Mall on I-45.

Open House provides visitors a variety of opportunities to meet astronauts and get their autographs, see the famed Mission Control Center, and touch and feel genuine space hardware. Visitors will be able to talk one-on-one with members of JSC’s workforce and see full-size mockups of the International Space Station and the Space Shuttle used to train astronauts for space flight. Free shuttle buses will be available to transport visitors to Ellington Field to view NASA’s unique aircraft and to the Sonny Carter Training Facility where astronauts train for spacewalks in the world’s largest indoor pool.

Entertainment at JSC includes programs in the Teague Auditorium. On stage in front of the Building 3 cafeteria, the bands “Max Q,” comprised of astronauts, and “Southern Cross,” comprised of JSC employees and friends, will play golden oldies along with rock and roll. Food, refreshments and souvenirs will be available at the JSC cafeterias. JSC’s Education Department will provide a variety of children’s activities including launching air-powered rockets and constructing flying rings.

-MORE- -2-

Anticipated Open House guests (pending availability) include the International Space Station Expedition Three crew, Commander Frank

Culbertson, Pilot Vladimir Dezhurov and Flight Engineer Mikhail Tyurin. The Expedition Three crewmembers began their four-month stay aboard the International Space Station on Aug. 13. They will be visiting with Open House guests in the Teague Auditorium from their home in space by remote broadcast.

JSC’s Open House coincides with the annual Ballunar Liftoff Festival, scheduled to take place Friday through Sunday, Aug. 24, 25 and 26, on JSC grounds. The Ballunar Liftoff Festival is a non-profit Houston community event to benefit education. There will be an admission fee for this event.

No alcohol or pets will be allowed at JSC Open House.

For more information about JSC’s Open House, call 281-244-5312 or visit the JSC website at http://openhouse.jsc.nasa.gov/.

Why don't you simply stick to the technical facts and ignore the techno babble and user heresy.

For a start I would focus on the receiver performance. The 3rd order imd dynamic range, blocking dynamic range, transmitter phase noise, 3rd order and second order intercept points would be a good start. The transmitter 3rd order IMD should also be a focus of attention. All these subjects are covered well in the ARRL Handbooks. These very important figures seemed to be typically totally ignored by most reviewers. If you look at typical rig like the Icom 756 PRO if you understood what these measurements meant you would not buy this radio, but many seem to think its the greatest thing and best performing radio ever. I have read reviews on EHAM where one user commented that he had every top line radio and that the receiver was the best he had ever had. Yet clearly this was not true according the measured data. I you not sure what all these term mean you can get a summary on www.elecraft.com

Cheers
Willy

After hearing all the discussion and owning a Yeasu FT-100D and a Yeasu
FT-757, I have to say I would like to buy another Drake TR-4. I sold
mine and now miss the quietness of the recieve background hiss. Order of
magnitude less hiss than modern rigs. You can really pull in the weak
signal when you are not fighting with the digital vfo noise floor.

Yep phase noise is a problem. The new Yaesu MK5 is a good example of a radio
with high phase noise. What a pity, it seems ham manufacturers seem to
forget how much listening hams do, its just a shame having to listen to
noise.

i have an icom ic-w2a dualband ht. it transmits and receives perfectly
well on the 2 meter side, but when i switch to the 440 band theres
something wrong. the power meter at the bottom of the screen shows im
trans,mitting and receiving, but there is no sound coming from the
speaker. is there a simple way to fix this, or does it have to be taken
to a place to repair it? would it cost alot to have it fixed if i eed to
take it in? thanks in advance.
Zade

I have a FT-5100. The display is beginning to turn black near the top.
No problem yet, but I want to get it replaced.

Any recommended repair shops in the Southeast US?

Thanks and 73
Chuck

Hello...

I am looking to test 3 Eimac 3CX400 A7 amplifier finals. More specifically,
I would like to
get in contact with somebody who is using this type of final in their
current setup, place mine
in there and compare the output results.

I will pay for this service and would prefer somebody who is located in the
Ottawa Valley.

I can be contacted via ve3uwc@home.com

Best 73es... Mike (VE3UWC/KD4DIO)

We are pleased to announce that version 1.0.15 of Log Analyser for
Windows is now available from http://www.acarsonline.co.uk

This release offers a number of enhancements:

Lowe Airmaster 3/2000 support
```

Added a new Statistics page

Added "Heard Aircraft" management so you can now see how many aircraft of a particular fleet you have heard

Aircraft Database can now be updated by Importing the CSV file available from ACARS Link (http://www.acarslink.com/alaceqip.htm)

List of New Aircraft displayed after importing a log file

Improved Text output

This is a FREE upgrade.

Thanks,

Mark Avey

Hello Group....
I have a friend who has a Icom 28 A, and has lost the manual. Can anyone
tell me on the web where to find a copy of the manual I can access, or
give me the step by step instructions for programing odd splits into the
radio.
Thanks for reading....
73
Mark

Had my Yaesu FT757GX checked out by these guys:

http://www.janrix.com/sts/

No complaints. They turned the rig around quick, and shipping back and forth from NH was no big deal. I'd probably use them again.

Regards,

Rick

FS-Celwave PD-526 UHF 6 Cavity Duplexer "Reduced"

Was $375--NOW $300 + Shipping

Physically, the unit is fine. It has been in and out of a rack a few times so of course there is some wear on the metal cabinet. Nothing too harsh, just a little faded paint etc. The cable plugs don't shine as much as they used to but as for what counts, performance, It works great

Contact: Ligosa@aol.com
73's Chris KC2CMP

Here is Info from the Celwave website on the unit:

These RFS units use a total of six pass-reject dual-notch resonators with three resonators per channel as the normal arrangement. They are suitable for many applications other than duplexing and their dual-notch circuitry provides a pseudo band pass characteristic for high Tx-Rx isolation. These units are available with reversible mounting brackets to allow flush rack mounting with connections in the rear.
Product Specifications
Frequency Band 380 MHz - 512 MHz
Application UHF
Type Base Station
Frequency Spacing-MHz 3
Tx to Rx Isolation - dB 100
Insertion Loss- dB 1.0
Frequency Range - MHz 406-470
Tx/Rx Bandwidth - MHz 0.025
Connector Type n-female
Rack Mount Yes

Mounting Standard
Frequency Spacing, Min. - MHz 3
Tx Bandwidth - MHz 0.025
Rx Bandwidth - MHz 0.025
Continuous Power Input, Max. - Watts 250
Insertion Loss, Tx - Ant. - dB 1.0
Insertion Loss, Rx - Ant. - dB 1.0
TX Noise Suppression at Rx Frequency - dB 100
Rx Isolation at Tx Frequency - dB 100
VSWR, Max. (50 ohms) 1.3:1
Connectors - Ant. Port N-female
Connectors - Tx Port N-female
Connectors - Rx Port N-female
Temperature Range - °C -30 to +60
Height - in. (mm) 5-1/4(133)
Width - in. (mm) 19(483)
Depth - in. (mm) 14(356)
Mounts in 19" (483mm) EIA Rack (Yes/No) Yes
Weight - lbs. (kg) 23(10.5)

Features/Benefits
- High isolation
Minimizes interference.
- Temperature compensated
Assures consistent performance across temperature and power range.
- Low insertion loss
Maximizes effective radiated power.

I am auctioning off the following items. Go to the below link for complete details!

HTX-404 70cm Handheld Transceiver
Yaesu FT-221R 2m all mode radio
TenTec 2m to 6m transverter
MFJ 906 6m Antenna tuner/SWR/Power meter
6 meter 5 element Yagi
Lunar Electronics 2m FM/SSB amplifier

```

Hi all,
This sort of question doesn't seem to be covered much here, but I'm sure someone can answer me or point me to a better source.

I am wondering about how signals are received by an antenna. More specifically, I'm wondering about the local detection of RF energy over a very wide spectrum. I have absolutely no knowledge of radiocommunications or antenna theory, but I have a fairly good grounding in 'normal electronics' and I'm really just looking for a foot in the door.
Suppose I have with me a differential amplifier or arbitrary input impedance, gain and frequency response. Suppose I also have a simple telescoping whip antenna, and I wish to connect the two such that I get a useful wideband RF output (to drive a field strength meter, spectrum analyzer etc.) How do I go about this? If I connect the whip to one input of my amplifier, should the other input be grounded? Will the strength of the received signal depend on my ground plane (IE capacitance to earth ground)? Should I connect the second input directly to earth ground, say at the plumbing? Perhaps if I use two whips, one at each input, or a loop that went to both inputs? Should the amplifying circuit be shielded? Do I need to terminate the antenna like a transmission line?
Also, for these various configurations and an easily obtainable signal source (say a remote control from a toy car, or garage door, or cordless phone at about 1 foot) what kind of signal can I expect at the input to my amplifier (in terms of voltage and current, or however else signal strength is specified)?

As you can see I have a lot of questions. I would be very happy if some kind person would venture to answer some or all of these questions, or point me towards a good text that can teach me what I want to know without too much extraneous information (the information I have seen thus far has been either too simple or too esoteric for me).

Thanks a lot,

Adam

This Homebrew GROUNDED GRID amp is in excellant condition. It has a NEW tube in it and an Eimac chimney with a very QUIET blower. Jennings VAC variable for final plate tuning and a very HEAVY band switch and is bandswitched - 160 - 80 - 40 - & 20 meters. With just 18 watts drive on AM I have been using it to the legal limit on AM and it just loafs along! Unit comes with solid state power supply and is controlled with a LARGE VARIAC. THE AMP OPERATES ON 240 vac. It is all installed in a rack cabinet 38" tall and is on casters. THIS IS A PICK UP ITEM ONLY IN MADISON, WI !! Picture via e-mail is available. Any 100 watt ssb transceiver will drive this thing beyond the legal limit and not be pushing it!! $650 or trade for ???

You see, wire telegraph is a kind of a very, very long cat. You pull his tail in New York and his head is meowing in Los Angeles. Do you understand this? And radio operates exactly the same way: you send signals here, they receive them there. The only difference is that there is no cat. -- Albert Einstein, when asked to describe radio

Hi! Don't you hate computers! Mine has crashed and I've lost all my email contacts etc.

Some excellent VK ham recently gave me some email contacts where I might get ahold of an etching templet for the NHRC2 repeater controler PCB.

If you remember contacting me please send me a reminder email!

Thanks,
Ken.

This is of course true to some extent, but actually helps me very little. Signal strength DOES increase in close proximity, or else everyone in the city with a 49MHz phone would hear my (unencoded) conversations. In truth the practical range for picking up such signals even with a scanner is only a few blocks.
Given that I understand that no antenna will recieve only local transmissions, but that it is them that I am interested in and must recover through filtering or whatever, can you answer any of the questions raised by my post?

My recommended approach to a basic question like this is to go find a copy of the "Radio Amateur's Handbook". Probably costs about $30 nowadays, but will be available in your local library. It has excellent chapters on basic antennas, amplifiers, etc.

Let me try to throw some basic physics at your question:
The radio signal you want to measure is an electromagnetic wave. This means that it is an oscillating electric field which is coupled to an oscillating magnetic field, which couples back to the electric field which ....

OK. So, you put a length of wire into this field, and a small current is induced into the wire. Also a small voltage. If your wire is conveniently 1/4 wavelength long, the ratio of the voltage to the current (output impedance) is around 70 ohms.

Looking at the input of your receiver, you need both current and voltage to detect a signal. Treating the RF input as a component, the RF current going into the amp must also leave, going to ground, or to the other half of your dipole antenna, if you have a dipole.

Typical receiver is designed for input impedance of 50 ohms (nearly enough a match to a center-fed 1/2 wave dipole), or sometimes 500 ohms (for antennas significantly shorter, like a whip). Minimum detectable voltage depends on bandwidth, but use 1 microvolt as a start.

e-mail me with questions, unless this doesn't make any sense.

This is where I'm really confused. Leaving the circuit through the other
half of a dipole makes sense, but leaving to ground? What's circuit ground
to the signal? Does one require a large area ground plane?

I am presently interested in broadband receiving with a whip. What happens
to the impedance of the whip at very low frequencies (IE Lwhip<<<lambda)?
Why is 500 ohms chosen? You mention 70ohms at 1/4 lambda, but what happens
at very high frequencies when the length of the whip approaches or even
exceeds the wavelength? Could I use a some-inches long whip to receive
energy from a microwave magnetron?

Perhaps these are things I need to read about, but any help would still be
appreciated.

Thanks a lot,

Adam

Hi
I need my Motorola MSF5000 UHF Analog repeater
Aligned and tuned. Also duplexer prepost filter tuned.
I can send the eprom out if you don't have the programmer.
But still would need the repeater aligned and tuned.
Will pay the going rate, cash of course. :)
Anyone in NJ that knows how to do it?
I will bring the Repeater to you so you don't have to travel.
Really hoping to hear from someone here in the group.

>This is where I'm really confused. Leaving the circuit through the other
>half of a dipole makes sense, but leaving to ground? What's circuit ground
>to the signal? Does one require a large area ground plane?

Some return path for the antenna current is required. In the case of a battery powered portable with no ground wire, it is only the chassis of the radio. This probably isn't very efficient and hurts the radio sensitivity. In general, you want the ground plane (if you have one) to be a large fraction of 1/4 wavelength.

>Why is 500 ohms chosen?

Actually, I looked at the back of my general coverage (to 30 MHz) reciever. It has a 50 ohm input, and a 500 ohm input.

> You mention 70ohms at 1/4 lambda, but what happens
>at very high frequencies when the length of the whip approaches or even
>exceeds the wavelength?

Very short antenna (<< 1/4 wavelength). high impedance (magnitude) with a capacitive reactance component.

At or near 1/4 wavelength, impedance (magnitude) drops to a minimum of 50 to 70 ohms, resistive.

Longer than 1/4 wave, impedance magnitude rises again, with an inductive component, reaching a maximum value of (I don't know what, but resistive) at 1/2 wavelength.

Then impedance drops again until 3/4 wave, and so forth. This assumes a center fed dipole, or a whip over a groundplane.

For the last two days (nights) I've been monitoring a CW signal here in SE Michigan on 50.062. After much difficulty trying to copy it (it's sent at somewhere over 20 WPM), I think I've finally gotten it copied and translated. However, it doesn't make any sense to me. Perhaps someone could shed some light on this? It's one of the following two strings, so far as I can tell..

VVV DE K8UKD NB MICH EN 82
ST ST ST DE K8UKD NB MICH EN OIIO

...or some mixture of the two, or something else entirely. This is the best I can do with it right now.

The message repeats over and over and over. I've tried (with my limited CW skills, I'm only a Tech, but I'm working on it) sending QSK, CQ, ST, but to no avail; the station just keeps on sending.

Could this be a beacon of some type? K8UKD is in EN55 somewhere according to qrz.com.

Hi Chris.

Welcome to the world of propagation beacons. While I'm not a regular on 6m and my station is currently in boxes, your copy is quite similar to that sent by beacons on other bands. In particular, by decoding the grid square, you have good idea where the band is open at this particular time. Unfortunately, beacons are a transmit only system, so they'll not respond to your attempts to break them.

HTH,

73, de Nate >>

I have a 2m to 6m transverter that currently accepts 8 watts to drive it. If I drive it with either 5w or 10w, is there the possibility of any problems? Will driving it with 2w too much damage it? Will driving it with 3w less not allow me to transmit on 6m? Any help is appretiated. Please email me DIRECTLY.
Thanks!

FT: Computer gear for HF Rig / equipment

I have the following computer gear available for trade or sale on a "newer" HF rig and equipment. Specifically interested in the below units but open for other suggestions. I am workable, will put money into it if your gear is worth more.

* Kenwood TS-50, TS-840, TS-847, TS-900
* Yaesu FT-100, FT-840, FT-900, FT-847
* Icom IC-706 / 706 MKII / 706 MKII-G
* Alinco DX-70 / DX-77
* or ??

What I've got.

// Compaq Deskpro Server
400 MHZ, 128 MB Ram, CD-ROM, 8GB HD, 10/100 NIC, AGP Video, Mouse + Keyboard,
Windows 2000 Professional. Tower case.More ram is available.

// Compaq Deskpro Desktop
350MHZ, 128 MB Ram, CD-ROM, 5 GB SCSI-2 HD, 10/100 NIC, Adaptec Ultra Wide SCSI Card, AGP Video, Mouse + Keyboard, Windows 2000 Professional. More ram is available. Desktop case

// Compaq Deskpro Desktop
350MHZ, 128 MB Ram, CD-ROM, 6 GB HD, 10/100 NIC, AGP Video, Mouse + Keyboard,
Windows 2000 Professional. More ram is available. Desktop case.

// Compaq Deskpro Desktop - Small Form Factor
466MHZ, 128 MB Ram, 8 GB HD, 10/100 NIC, AGP Video, Mouse + Keyboard,
Windows 2000 Professional. More ram is available. Small form factor case, very small footprint.

// Sun SparcSERVER 10 - Unix
50-MHZ RISC processor, 96 MB Ram, 4 GB Hard SCSI Drive, CG 6 Color frame buffer, On-board fast SCSI controller, On-board 10-100 base T Ethernet, On-board sound, additional fast SCSI controller, additional 10-100 base T Ethernet controller, Mouse + Keyboard. Excellent webserver, file server and strong Unix operating system. Machine is running Sun Solaris (preferred) or any flavor of Linux ported for the Sparc platform. Aurora case.

// Sun SparcSTATION 5 - Unix
70-MHZ RISC processor, 64 MB Ram, 2 GB Hard SCSI Drive, CG 6 Color frame buffer, On-board fast SCSI controller, On-board 10-100 base T Ethernet, On-board Sound, additional fast SCSI controller, additional 10-100 base T Ethernet controller, Mouse + Keyboard. Excellent webserver, file server and strong Unix operating system. Machine is running Sun Solaris (preferred) or any flavor of Linux ported for the Sparc platform. Aurora case.

// Hewlett Packard Rack Mount Network Hubs
4 available, 2 14 port and 2 15 port hubs. All are in excellent condition and recently removed from service. These are rack mount servers.

// Proxima LightBook LB20 DeskTop Projector
SVGA and RCA inputs, 200 ANSI lumens, Serial jack, Computer in jack, Monitor out jack, Video in jack, Audio in & out, TV output, Twin Lamp, True SVGA compatibility (800 x 600), International power supply, LightBoard drawing tool, Remote control, Lightweight (11 pounds - 13.5 x 9.25 x 5 inches), Custom padded case. This unit is in excellent condition and includes all the original equipment (cables + books).

If you see something you like, please let me know. I am open to trades or sales on any of the machines. Willing to trade multiple machines for the right gear. Response via Email is preferred.

Sales always welcome ...

Thank you!

>
>Tom

Since this guy doesn't clairify, he's refering to two auctions I cancelled.
They were for a 6m transverter and a 6m tuner, which he apparently must have
been bidding on. In order to cancel an auction, you have to cancel each bid,
then cancel the auction, otherwise it tells the highest bidder that he/she
won... I'm keeping these items because my new 2m radio has a 5w setting, which
is enough to drive the transverter and of course I need a tuner! :)

Actually, you are thinking about the first auction that I had, where I was
offereing all the items in one auction. That one failed to meet the reserve
price, so I broke it up into individual auctions. I didn't spam the newsgroups,
I posted the ad once a day. I've only posted about these auctions about 3 times
in the week or so that they have been running.

I just love all these non-hams criticizing me. Don't you have some music to
play on channel 19 or something?

Wow, alot of questions.
Take a look at teh antenna book published by ARRL.  It should answer
all your questions.  Here's the link:
http://www.arrl.org/catalog/index.php3?category=Antennas%2FTransmission+Lines

HI there!

Yes, i own one of this excellent unit!!!
I have made 3 mods on this radio..
MONI+BAND and power on you get the full cover...
And then you can remove a diode to get more TX
and you can also adjust the watt output...
I got it raised to 7W but then the radio get hot like the hell, hehe...

///Johan SM4XFJ, Sweden

Actually, my experience with reporting these idiots to Hotmail has been pretty good.
They terminated about a third of the violators I have reported. The other two thirds,
however, have forged a Hotmail address. Hotmail simply adds them to their list of
folks to proscecute if they ever find them.

Wayne Faris, KE�BZ

Now why don't you show ALL your colors and put the WHOLE message and the
real deal?  Talk about being a child.  You even hide!

One comment is acting like a three year old?  I'd say it is more on your
shoulders with the inane whining, auction canceling when you don't get your
way, and consistent moaning when someone disagrees with you.  I'd say THAT
stacks up to childishness.

Not to mention that comparatively, you're still in diapers - especially as a
"supposed" ham.

I do act like a ham - I run HF, NOT the CB bands of ham.  What's wrong -
can't pass the code?

>
> Once a day is not spaming. I clearly place FA: at the begining of my
posts, so that indicated that it is For Auction, not for sale.
>
> Why don't you start acting like a ham instead of a 3 yr old child who has
been told he can't have a cookie.
>

The moaners are the ones who cried "You took your items off the auction! waaaa!! I wanted to bid on them! waaa!" (To paraphrase). I haven't whined at all. It's you guys who whined because you didn't get your way. As my email to you stated (and previous messages did), the auctions were pulled because I purchased a 2m/70cm dual bander with a 5 watt setting, which is perfect for my transverter, so I decided to keep it as well as the tuner/swr meter since I would need one anyway.

It's amazing how much someone will cry when they can't get something they want. I see moms with kids like this in Kmart. I wish they'd smack them and shut them up.

Tell it all again bozo!

You obviously have me confused with someone else.

First reason: You didn't trick me into looking up squat. Your brightness is only overshadowed by your self import. Go back and read your OWN posts. YOU places your call and name at the end of your post(s).

Second: Since I was not one of the two others that responded, (You DO really need to grow up in the digital age.) You didn't "fool" me into giving my call sign. I ALWAYS DO BOZO. I'm proud of it. You, I'm not so sure of.

Enjoy yourself. It must be the only thing you can really do. You obviously can't build or repair your own equipment.

As to bidding on your junk? Wouldn't have entertained it. DX contacts by HF simple? Only if you run a lot of power. Try QRP - or isn't that in your limited vocabulary......

Sent: Friday, August 10, 2001 10:16 PM
Subject: You're my hero, Joe Hamradio.

Obviously you weren't paying attention. The auctions were cancelled because I ended up buying a dual band radio (2m/70cm), which can do 5 watts, which is what the transverter needs to drive it. Since I would be able to use it, I decided to keep it. Since I'd like a tuner/SWR meter for 6m, I kept the one I was going to sell. Those that accuse me of cancelling because of the bids need to look again. I just sold a 5 ele 6m yagi for $71, a 2m all mode for $150 and a 2m all mode amp for around $60. If I was concerned about getting more money, I'd have pulled them all.

Not to mention that comparatively, you're still in diapers - especially as a "supposed" ham.

I do act like a ham - I run HF, NOT the CB bands of ham. What's wrong - can't pass the code
?

I really don't care if you've been a ham for 5 years or 5 decades. I couldn't
give a rat's ass about HF. I enjoy making the local contacts on VHF/UHF and further contacts when conditions are right. Anyone can go to 20 meters and work DX, like shooting fish in a barrel. HF isn't the ultimate goal of ham radio. It's just one aspect of it. As far as being a "supposed ham", I passed
the minimum requirements to get my ticket. If someone gets a driver's license
but never gets a CDL or a motorcycle license, are they a "supposed driver" because they didn't go any further? No.

The only reason I challenged you to give your call was to get your goat and it worked. That's also pretty sad that you went through the effort to even look up my callsign - that's how much I pissed you off. Have a nice day.

QRP, QSX, QRT, QSY, QTH, QRZ... they're all listed in the back of my log book.
Very nice of them to list them for those of us that are HF challenged.

I think I hear someone on 160 meters calling you.

Have a nice day, grandpa. Don't forget to have your fiber before you key up the
ole' Heathkit.

Sorry, didn't realize your were that mentally challenged. Since you may not

understand it - LOW power output. How about 2w troposheric ducting to South
America on two meters. No power to speak of, no beam antenna.

>
> I think I hear someone on 160 meters calling you.

At least I can build something to work whatever band I feel like operating.

I was already aware of what QRP operations are. Thanks for your Webster's
answer.

>At least I can build something to work whatever band I feel like operating.

Yeah, but personal pleasure devices requiring batteries don't count as ham
radio gear.

>Don't you just wish there was a Heathkit or something like it that YOU might
>build?

Nope.

Subject: ICF-SW7600 Help Request (part II)
Date: Sun, 12 Aug 2001 11:16:23 -0300
***

Hi to all, again

Regarding my very recent e-mail request (asking for help to fix a problem in my SONY ICF-SW7600 receiver), I assume you got a clear picture of my slowness in the field of electronics. I know I might have used too many words for providing very little information.

But I would all the same very kindly encourage you to reply to my request without caring about the "language" in your answer (no matter if you use a very brief, highly technical terminology).

Working in the Antarctic field makes people learn how to fight against different problems, without official dealers and/or original spare parts in the vicinity. I had succeeded in repairing several quite complex instruments with very little or no "external" help at all, in the last 15 years. I this sense, I have already used very low power soldering-irons working with magnifying glasses with extremely small components, many times.

My feeling is that the problem in my radio might be related to a component degradation (something like a capacitor (?) that lost its rated value).

I am confident you know where on the circuitry I should start looking for and I anxiously await your comments.

Thanking you in advance again I hope you enjoy the remaining piece of this weekend,

Yours sincerely,

Andr�s F. Zakrajsek

Subject: ICF-SW7600 Help Request

Dear Mr. Stephan Glosskass, Dear Mr. Daniel Grunberg, Dear Mr. Trent Phillips, Dear Mr. Dave Z.,

Thank you all for the information about the SONY ICF-SW7600 receiver on the web.

I have an ICF-SW7600 since 1991. It was purchased in Switzerland. Due to my job (Antarctic geodesy) I very often relied on Short Waves in order to be able to tune radio programs at all.

Two months ago, my radio presented difficulties in tuning preset FM stations.

i) It took a while (just some seconds first) to have the sound from the selected preset station "clean and stable". The noise would suggest that the station would have stopped transmitting or that a different "empty / no station" frequency was tuned in the FM band). This was observed only after turning the receiver on ("cold" start), getting to normal performance immediately afterwards.

ii) The problem grew with time: although the selected preset FM frequency value would stay always fixed on the display, the radio would behave so that it looked like if one would be searching for different stations along the dial (different stations would be heard very briefly, sequentially). Afterwards (after 1...2 minutes) the desired station would become "clean and stable").

iii) Yesterday it was no more possible to tune any of the FM-stations at all, anymore.

iv) In order to obtain a "clean" sound while tuning into MW band stations, the fine tuning control became necessary.

v) The SW band seemed not to present problems at all.

Today I have just left my radio at one of the SONY official service stores (here in Buenos Aires). Unfortunately, the electronic technician that attended me has very honestly recognized that they are not quite familiar with this kind of product. Therefore, and just in case, I would very much appreciate any possible hint, comment and/or advice to be taken into account for bringing my receiver into normal operation again.

Thanking you in advance I hope to hear from you soon.

Sincerely yours,

Andr�s F. Zakrajsek

Hi there
Has anyone an Icom IC-201 for sale working or not???
I have been looking out for one for ages.
If you should know of the where abouts of one, please contact me
Thanks and best 73's

Martyn

I am coming over to Boston in a couple of weeks. Are there any Ham Radio
outlets available in the area? Especially those with Web sites?

Thanks in advance.

Ed

I believe HRO and possibly one more are locaited North of
Boston, about 50 miles up I93 in Tax Free NH. Derry I believe

That is if their governor Sh*tHead Shaheen has not managed
to ruin what was once a Beauityful state with all her new Taxes.

Damn the massachusetts democrat Liberals. They moved to NH
to enjoy it's beauiity and to get away from Massachusetts..
Now they are turning New Hampshire into, Taxachusetts NORTH.

Just My Opinion..

Bob

Well, the Imax 2000 IS primarily designed for use in the CB band or 10 meters
with a little tuning and trimming... I wouldn't expect real good performance,
even just RXing, on other bands...

Hallo;
Ik schijn nogal wat `amateurs `tegen de schenen te hebben geschopt door mijn
wat simpele vraag over een antenne dus probeer ik het nog eens en dan met
wat meer info van mijn kant
(Wie helpt mij aan een goede kortegolfantenne of geeft me een goed idee om
er
zelf een te maken, was de vraag)

Bijv. wat voor draad en moet ik een mlb gebruiken
Hoe hoog moet de antenne hangen
wat voor coax kan ik gebruiken

(Ik heb een oude philips ontvanger met buizen type BX 925 X 00A)
Ik heb ongeveer 15 meter ruimte om een draad te spannen
Bedankt voor elke reply en de beste groetje`s van d.muis@chello.nl uit
Eindhoven

Beste `meneer` L.G.M.vanLelieveld
Nee ;
Ik snap er niet veel van wat u probeert aan mij uit te leggen; wat me wel opvalt is het sarcasme in uw emailtje . U hoeft mij ook niet verder iets uit te leggen Goededag
Van: "L.G.M.vanLelieveld" <l.g.m.vanlelieveld@okem.nl>
Aan: "D.muis" <d.muis@chello.nl>
Onderwerp: Re: antenne
Datum: woensdag 15 augustus 2001 23:06

Ha die Muis
een Dipool antenne gevoed met een stukje lintlijn van 300 450 ohm met daarachter een symmetrische Ant tuner is gewoon als Multiband Antenne de Beste keus
een wat mindere de zelfde dipool met een 1 op 4 trafo en dan koax naar een asymmetrische tuner
Dan een eindgevoede draad met of zonder spoelen of MLB apparaten
Weet je wat ik bedoel ?of is dit misschien te moeilijk ik weet je kennis niet op dit gebied
ik wil je best helpen het een en ander te maken
groeten PA3EKA

Dear All,

After ummming and arrring, wether to go for the 706IIg or the FT-100,
I summed up all the differrences for me, and jumped in at the deep end
and bought the FT-100.

The main reasons for me choosing this radio over the Icom, was A) it
was slightly cheaper, B) It is slightly smaller, and C) To me, it had
a better feel to it over-all.

Ayway, now I have this radio, I need some help with it!

Please EXCUSE my ignorance, but I am a newbie!

Anyway, one main question I am stuck with...

If I select frequency 27555, FM (ie CB "MID" channels in the UK) and change the STEP to 10hz, when I change the SELECT know on the left, it jumps upto 27560, then 27570, and I wanted it to jump from 27555 to 27565, 27575 etc.

So, their MUST be a way of telling it to jump up in steps of 10 from the starting point, not going upto the nearest ten, if you see what I mean.

So, how do I get round this problem ???

Looking forward to your reply!

Thanks, Simon Worsley.

The HRO store in Nashua NH is worth the trip. There is a "You Do It Electronics" store in Newton, a 15 mile ride to the west of Boston, but I don't care for the sales folks or the product selection and prices. RG

Adam,
First get a book on op amps.
You over simplify everything you have spoken about. Op amps are the basic
building block of electronics. All op amps are not equal!
To answer you question... I would recommend a book written by Lou Franklin,
"The screwdriver Expert's guide."
OK so you can't stand CBers, but This is a good book and CBs are cheap to
tinker with and fix.
I apologize if I hurt your feelings. Good luck--BTW The ARRL guide I
probably a good book too. I bought the 1996 Issue and was disappointed. The
content of build-able projects was left wanting. I have been a tech for a
few years and don't think I could build half of the projects presented. May
hams know very little about electronics is practical situations. Hams today
study the commercial guides to pass the electronics part of the ham test.
Heck, I use an oscilloscope almost every day, but I have never tuned or
neutralized the finals of an HF rig.
Go figure!
Adam, I like you questions-I reminds me of myself when I was just learning
about electronics.
Read up on Tank circuits and Band-width gain of op amps.Don Lancaster,
"Active Filter cookbook." is an excellent Op Amp book.

Regards,
Dave

I doubt you can do that. The CPU will reset to the nearest "00". The
706 is this way also. The only way you can scan those freq's is to use
a 5 hz step. MK

Hi!
Does anyone know whether there is a site where it is possible to access BLU,
and then talk from a PC to a BLU receiver? A friend of mine is sailing
around the world, and it would be nice to discuss with him.
Thanks a lot
JC

Quelqu'un saurait-il s'il existe des sites qui permettent d'avoir acc�s � la
BLU, et ainsi discuter avec un radio-amateur � partir d'un PC? Un ami fait
le tour du monde � la voile, et je pourrais ainsi disuter avec lui.
Merci beaucoup
JC

J'ai une page sur la reception et internet a bord.
Mais pour parler en blu, tu n'as pas besoin de pc.
Tu dois vouloir parler du mail.

Thank you for reading this posting, any help would be appreciated with the
following problem that I have.Here is one to get your mind teased:::

Icom 756PRO or FT-1000MP or FT-101ZD as an input all give 100W
Feeding a Henry 2KL-4 Linear, running a pair of 3-500's
Upon initial key up in to a dummy load starts off 700W and drops to 200W in
about 8 seconds.
Here's what I have tried
I have tried a total of 5 Transceivers
Tried a copal of dummy loads
Checked all of my leads
changed the tubes for Brand new ones
checked the reset button on the linear
I do notice when keying with 0W rf that the grid meter goes down to below
the zero mark but I suspect that is just meter alignment and it only just
goes down a slight amount.
you can see the meters creep down after about 8 seconds from 80 Grid 480
plate to 45 Grid and 380 plate
I have had the power company come out to check the voltage and current draw
and everything there is 100%
Any ideas as this is blowing my mind
I appreciate any constructive input that any of you may have.
Thanks and Best 73's
Martyn

All,

Has anyone compiled a list of procedural signals (i.e. QSL, DE, 73, etc.) for amateur radio? I've tried to find a list using several popular search engines, but I can't seem to locate anything useful. I'm new to amateur radio and trying to get myself squared away before transmitting for the first time.

Thanks!

DG

It might be an expensive way to go, but they are (should still be anyway) in the ARRL handbook. You should be able to find a good used one for about $20 - $30 and, as a newcomer to the hobby, you'll appreciate all it has in it.

Welcome!

Barry - N4BUQ

In addition to George's question, I would ask, does this happen the same way on all bands? If so, that probably eliminates leaky door-knob capacitors in the output stage, as well as problems with the input tuning stage. It might also eliminate parasitic oscillations.

Try checking the filament voltage for variation. Another thing to check is to see if the input SWR to the transceiver changes as the power drops.

Carefully check all the components on the Bias Board...at least look for
discolored components or circuit traces.

I would be a bit suspicious that you only get 700 watts out of a pair of
3-500Z's with 100 watts drive. Should be more like 1200. Have you checked
either set of finals in another amp to see how they perform? I have heard
of people getting band new tubes that just don't work, or that were damaged
in shipping.

Let us know what you discover!

73,
Ron

>What size wire should I run for my station ground?

You'll get lot's of answers on this one..

I use a #6 stranded wire to three ground rods... it's sufficient for my application (#8 would probably suffice too). Many hams (and I have in the past.. just depends on what I have on hand) prefer to use tinned copper braid (it IS a better RF conductor)

Thanks for ALL of your offers of assistance, Please note the following
At 700W the SWR was non existent, a perfect match then as the power
decreased the SWR went up to a total of 200W out = SWR of 2.9:1

The SWR between the Dummy load and Linear is fine, that does not change
HOWEVER the SWR between the RIG and the Linear goes up as described, The
High voltage is 3200V without load and drops to 3,000 under full load of
100W, does this help?

Best 73's
Martyn

OK...based on that, I would suspect everything in the input/filament circuit. If this happens only on one band, the input tuning is where I would look. If it happens equally on all bands, I would check the following:

1. The filament transformer
2. The filament chokes
3. Any loading or "swamping" resistors in parallel with the RF input
4. The zener diode that controls bias
5. The tube socket
6. The RF input switching relay.

Right now, I would be most suspicious of the filament transformer, since low voltage can severely limit the gain of the tubes, and you should be getting more out than 700 watts. The 3-500Z's need 5 VAC, and the experts say you need to measure "true RMS", and usually recommend an iron-vane volt meter for most accurate results. I think if there is a problem, you'll see it on any AC volt meter...probably a reading 4.5 volts or less. A shorted-out pair of bi-filiar or tri-filiar RF chokes that feed the voltage to the tube socket(s), a bad solder joint anywhere along the way, or a bad contact in the tube socket would give you the same result.

Another question...do the plates glow at all when you run up the power, and if so, do the two tubes glow equally bright?

This auction is for a complete 2 meter/6 meter station! Included are: Yaesu
FT-221R 2m all mode radio, Ten Tec 2m to 6m transverter, 2m amplifier, MFJ 6m
tuner/SWR/Power meter, 5 element 6m yagi. The only thing it's missing is a
power supply for the transverter and a 2 meter antenna!

This is a follow up to my recent posting requesting for help with my linear, Henry 2KL-4, I would first like to thank all of the kind people who have thrown suggestions at me, I have followed most of them through.
Well here are my findings as of tonight (Tuesday)
I located a dry joint and re-soldered it now I get the following

80Mtrs   400W   50grid   .380 Plate Stable
40Mtrs   800W   160 Grid   .560 Plate Stable
20Mtrs 400W and drops to 150W UNSTABLE
15Mtrs   600W   110 Grid   .520 Plate Stable
10Mtrs   600W   170 Grid   .66 Plate Stable

Now these are the results, the High voltage remains constant. All above tests in to a Bird Dummy load and power read a Bird wattmeter. The SWR between the TX and the Linear increases on 20Mtrs as the power drops. The exciter output is 100W constant key down.

So Low output and unstable on 20Mtrs Any thoughts???
I do notice the right hand tube glowing a slightly brighter orange than the left one.

I have schematics should anyone need them, I have them zipped

I thank you very much for your constructive suggestions

Best 73's
Martyn

Hi,
    I've just found an old SAA5050 character generator in my junk box and I'd like to put it to some use. I've been told that some amateur radio enthusiasts have been using them? Anyone care to send me some info? I've got the datasheet, but I'd like some form of reference design that I can base my own stuff around. Is it as simple as hooking up a 6MHz and a 1MHz clock, hooking an EPROM's data lines up to the 5050 and wiring a 4040 up to the EPROM and the 5050's 1MHz clock? How about power-on-reset and stuff like that?

Thanks.

The web site http://www.eham.net/reviews/detail/417 contains a review which speaks of a feature of the IC-T7 whereby "With a simple keypad mod (just pressing certain keys on the kepad-- no cutting or soldering) it gets full 800 MHz coverage", and "the newest production units can still be push button "enabled" for extended receive".

Since I am new to ham radio, and I recently acquired an IC-T7H, I am definitely interested in such a feature. Does anybody out there
1) know what this is all about?
2) know how to access this feature?

Thanks in advance.....

Armin

Flat copper strap or flashing is a lot better rf wise. The smooth
surface is much better than the braid. Of course, as many probably
know, I use no rf ground in the shack. :/ I do have to bond my
mobiles together though. I use flat copper strap to bond from body to
frame etc. MK

I've got a ICOM IC-T81A quad band HT for sale or trade.

Includes an extra battery back
Wall charger
Quick charger
ALL Manuals and documentation.

This radio is only a couple of months old and in EXCELLENT condidtion.

Covers the following bands:
2 meters
6 meters
70 cm
1.2 gig

What I need is a radio (Mobile or HT) that I can use for sat work. (2 meter and 70 cm). MUST be able to crossband/split. I've been roped into having to demo sat communications for a local school next year so I need to get the right equipment and learn what I'm doing :)

Thanks!!!!

Hi, I'm Mike W9RAT
At The Auction Block, we believe in member appreciation, not ridiculous fees! We currently have auctions from dolls to camping gear! All auctions are FREE through 7/30/01. If you join this weekend, I'll give you a $5.00 credit in your auction account for becoming a member. To redeem the credit:

(1) Go to our site at: http://www.theauctionblock.tv/ and click on register (Main page, top menu).
(2) Complete the registration form. You will receive an email with a temp password.
(3) Return to the site, and confirm/change your password.
(4) Then send email to: WL7CJU@SKYENET.NET telling me your username.

At The Auction Block, $5.00 = 5 auctions! ($5.00 credit redeemable only at The Auction Block as auction credit, not cash. Email must be sent prior to midnight, July 29, 2001). Hope to see you this weekend!
Thanks, Mike. The Auction Block, $0 Commission & Free Classifieds.

Hello...

I am looking to test 3 Eimac 3CX400 A7 amplifier finals. More specifically,
I would like to get in contact with somebody who is using this type of final
in their current setup, and compare the output results.

I will pay for this service and would prefer somebody who is located in the
Ottawa Valley.

I can be contacted via ve3uwc@home.com

Best 73es... Mike (VE3UWC/KD4DIO)

UseNet Policy
eBay users may not post on Usenet groups (Internet newsgroups) to advertise eBay or an eBay listing that is inappropriate or violates the Usenet board policy. If Usenet abuse is reported to eBay, we may among other remedies) remove the listing, issue a warning, temporarily suspend or indefinitely suspend the offender's eBay account.

We have no tolerance for UseNet abuse and will take action as appropriate. Please note that we can only take action in cases where it is clear that an eBay member has posted to the Usenet inappropriately.

Usenet abuse should also be reported to your ISP (Internet Service Provider) and the email provider of the person posting on the Usenet. Both of these organizations are in a much better position to prevent future Usenet abuse. Generally, you can send email to abuse@"ISP".com to properly report perceived violations.

I just aquired an Alpha 76PA linear amplifier and I don't know a whole lot
about it.
Anyone know where I can find a manual for it? Alpha wants $50.00 for a copy.

Also, any hints on hooking it up to a Kenwood TS-440S, or am Icom IC-730
would be nice!!!

Thanks!!!

Karl

ARRL publishes a net directory that is fairly complete.  Try www.arrl.org or
any ham store that carries ARRL publications.

I doubt if there is one list that has everything, but you can start
off with:

http://www.ac6v.com/nets.htm

This has links to the ARRL Net Directory, the World of Radio Nets To
You! list, and others, plus its own list of nets and links, on all HF
frequencies (not just 20 meters).

*** post for FREE via your newsreader at post.newsfeeds.com ***

Hi,

To balance out the slant of network news, and the likes of Dan Rather,
I'm looking for frequencies and broadcast schedules of some of the
following noteworthy individuals:

Mike Kornke, Linda Thompson, Bo Gritz, and Bill Cooper for
a start. Others welcome too!

Please no flames, just frequencies, and times of their broadcasts.
Thanks for answering here.

hi i am interested on purchasing a scanner. I wanted something with superb

```
sensitivity
and selectivity.  I had a Q7a but it was like a toy.  Is the R2 basically
the same?

Is the scanning speed ok on the THg71a, and does the radio resume scanning
immediately
or is there a resume delay?

are the 8000 and 8200 as sensitive and less noise rejection as the amatuer
radio th g71a?

the radios list for   r2 - 246.00
                      thg71 - 232.00
                     ar8000 - 233.00
                     ar 8200 - 380.00

which one would suit my needs as a good scanner sensitivity and selectivity
wise?

i already reviewed the freq capabilites.     I am looking for something
thats about
.20uv   and 70+ db rejection.

any timbits of info would help
thanks

> Actually aside from the battery going south..... the radio is in almost
> perfect order!!!

No sweat. The battery shell is glued together pretty lightly (unless someone has messed with it). You can run a utility knife around the seam several times and gradually work through it. The cells themselves are standard NiCads and pretty easy to replace.

> need to figure out the steps involved in order to program it, set PL tones

> etc... just like I do on my other HT and mobile rig. I am comfortable now
> with both my Icom HT and my Radio Shack mobile to the point I could operate
> the damned things blind. (except for knowing what frequency I would be on
> in VFO mode)

An HW24HT was my primary rig for over a decade. I could work it one handed without looking, but programming it was something I sat down at a table to do, with the manual in hand. Once it's programmed, it is pretty easy to use (once you get used to the keypad layout) but I never did find any easy logical ways to program it.

Selectivity is not normally used to keep out the noise. It is to keep signals near the desired signal from interfearing with the desired signal. The ideal selectivity depends on the type of signal you are trying to receive and how much distortion you are willing to put up with.

The filters are often rated in the 6 to 60 numbers. That is the first number in khz is made to match the type of signal. Around 2.3 khz for SSB and 12 to 15 khz for ham type FM. The second number is for a signal that is 60 db below the first signal. That is the shape factor of the filter. The ideal would be that it is no wider at 60 db than it is at 6 db. That is almost impossiable to obtain. The smaller the second number is at the 60 db point , the beter the filter will be as to rejecting a signal that is out of the pass band.

Hi all.

Looking for soundcard software for PSK, RTTY,SSTV,MFSK,HELL,CW ETC. With
interfaces to isolate your rig from the pc.

Then visit my site :-)

http://www.btinternet.com/~g3vfp

Pass the word !

Thanks,

Dave G3VFP

>
> Mike Kornke, Linda Thompson, Bo Gritz, and Bill Cooper for a start. Others welcome too!

+++

Mark Kornoke is in prison. Bill Cooper is voluntarily doing a life prison sentence by holing up in his house to avoid (get this :), going to prison. Great insight Milton! Bo Gritz has been off the air for nearly 6 months. I don't know if Linda Thompson was ever on the air (isn't she a liewyer, er, I mean lawyer? If so, beware of the viper). Cooper still broadcasts but his self imposed imprisonment has eroded his grip on reality further and made his personality disorders even worse (if that's possible). If you want to listen to a "right wing" broadcaster that actually has some credibility check out Alex Jones.

I'm not sure of his broadcast schedule but I'm sure it's posted on his
website http://www.infowars.com

GSBARC ARRL VE sessions are normally scheduled every forth Sunday
of the month, 12:00 NOON.

No pre-registration required. No walk-ins after 1:00 PM.
Exams are given for 5 WPM CW, Technician, General and Extra class.
All exams are ARRL/VEC. New CW exam format effective July 1, 2001.

Location: Babylon Town Hall
Emergency Operations Center
200 E. Sunrise Hwy.
North Lindenhurst, NY

Talk in : W2GSB repeater 146.685 -600 118.8 PL

All VE sessions are located at Babylon Town Hall, (between Rt. 109 and
Wellwood Ave.) in the Emergency Operations Center. (unless noted in the
VE schedule). People coming from the west need to make the left onto
N. Indiana Ave to enter the Town Hall parking lot. People coming from the
east use the main entrance. Drive around to the back of the building between
the wings. Look for the sign over the door pointing to the Emergency
Operations Center (it's a small white sign with red letters). Go to the
bottom of the stairs and push the top button. When you get inside the
building go left down the hall. The Emergency Operations Center is on
the right side of the hall.

Please bring the following:
- Photocopy and original of current Amateur Radio License if licensed.
- Photocopy and original of CSCE(s) that are current.
- two forms of ID, at least one photo ID.
- pens or pencils.
- Calculator for math problems on exams, no pocket computers are allowed.
- 2001 Exam fee is $10.00, please bring exact change.

2001 GSBARC VE schedule.

July 22
August 26

September 23
*October 28 - Hamfest
November 25
*December: * NO scheduled VE in DECEMBER 2001 - Season's
Greetings

If you have any questions about GSBARC exam sessions you can

Johnn,

I have not seen any other posts...so I can scan mine (US model) and email to
you if you would like.  It will take me a couple of days but just reply with
your email and I will send it to you

Cheers,

Darcy

Sometime ago Kenwood made a mobile radio that operated on 220 and 440.
Can someone supply me witht he model number please? And is this radio
still available? Ant other comments about this rig would be appreciated.

Thanks
Richard

I teach part time in the electrical engineering department at the University of New Mexico. Specifically, I teach an "Introduction to Communication" class (AM, FM, Pulse Modulation, SNR, Data Communication, etc.) to seniors and typically first year graduate students. As a recently licensed amateur (although I have had a longtime interest in the technology aspects of the hobby) I note that ham radio dovetails very nicely with the classes I teach. In fact, so much so that I am contemplating offering a class tentatively entitled "Introduction to Radio Communication" that would be somewhat oriented towards the license exams. Has anybody out there heard of any sort of similar offering at any other university (I would be interested in comparing syllibus's)? The ARRL web site information on education activities seems to be oriented to high schools, boy scouts, and the like. I am after something perhaps somewhat more technical oriented to electrical engineering students....

Thanks in advance....

Armin

Wonderful idea. No telling where it could lead.

You might use the ARRL outline for continuity and completeness and just beef it up.

One thing I've observed that has transformed the teaching of engineering is the emphasis on teamwork and creativity. In addition to helping them with the exams you could create teams and assign competitive projects. Not as elaborate as a solar-powered racer but more than building a bridge out of raw spaghetti.

Maybe they could design and build a station using the minimum number of components, or a transmitter or antenna with the highest efficiency, etc.

Of course, one of the team projects could be to see which group gets 100% licensed first. This is called "cooperative learning" and (as you probably know) is the subject of some admiring articles in the psychology world. Check out http://www.newhorizons.org/trm_cooplrn.html.

WHAT THE HANDBOOKS DARE NOT PRINT

The SWR-meter is located in the transmission system immediately at the output of the transmitter. It is often housed in the transmitter case itself.

Immediately following the meter is a variable impedance transforming network, sometimes known as the tuner. The SWR meter can also be housed in the tuner case. But in any event the transmitter and tuner are electrically near to each other with the SWR meter in between.

A transmission line of coaxial or balanced-pair construction runs between the tuner output and the antenna feedpoint.

From one frequency band to another, from one end of a band to the other, the antenna input impedance changes greatly from one complex value to another. These swings in impedance vs frequency are reflected back to the transmitter end of the line unchanged in magnitude.

Transmitters are designed to work into a particular value of load resistance Ro. This is the resistive load into which the transmitter is capable of developing its maximum, undistorted peak output power without exceeding any internal voltage, current or dissipation ratings. It is highly desrable, therefore, for the load on the transmitter to be set to the design value at the start of a transmission and continuously monitored during normal operation.

The tuner's purpose is to transform the wide range of impedances vs frequency, seen looking into the transmission line, to the constant resistive value of Ro at the the tuner input. In modern equipment this operation may be performed automatically, the tuner coils and capacitors being switched by relays or driven by electric motors.

The SWR meter is essentially a 4-arm, RF resistance bridge. Three of the bridge arms are intgral to the meter and the 4th arm, the only variable arm, is the input impedance of the tuner. The circuit is arranged such that the transmitter is the signal source. The values of the bridge ratio arms are chosen such that the 4th arm, the input impedance of the tuner, is effectively the transmitter load.

Inside the meter the bridge RF unbalance voltage is rectified and displayed on a moving coil meter. When the input resistance of the tuner is equal to Ro the bridge is balanced, meter deflection is zero and the transmitter is operating with its design value of load resistance. The purpose of the SWR meter, therefore, is to indicate that this important condition has been, or has not been realised.

It should be noted that when the bridge is not at balance the meter deflection gives very little information about what the actual load on the transmitter is. There is a very large number of combinations of resistance and reactance which will give a particular off-zero meter deflection and this is further confused by the uncertainty in transmitter RF output volts.

So the meter indicates only whether or not the transmitter load is Ro. But this is all that's required of it. Brightness of a pea lamp would provide the same information more economically if the meter movement and scales were not needed for other transmitter monitoring purposes.

It is now clear that an automatic tuner makes use of the magnitude and phase of the bridge unbalance voltage to maintain the bridge in a state of balance.

Also note, for the meter to indicate correctly, it must be designed around the same value of Ro as the transmitter it is used with. The standard adopted to allow meter interchngeability is Ro = 50 + j0 ohms. So meters generally differ from each other only by their through-power handling capability and operating frequency range. Internal circuitry and physical construction vary widely with frequency range but the basic mode of operation is always that of an RF resistance bridge. It doesn't actually measure anything.

Hello everyone,
      I need to replace my Ft 50 FNB41 9.6v/6mAh battery. I was looking in to
getting the FNB-42 but was told it was much bigger. I was checking out MAHA
7.2v/1800 mAh NIMH but I am concerned with the size. How big is it compaired to
the original? I use the stock soft case for the radio and the FNB41is a tight
fit so bigger is out of the question. All the people I know and have the Ft50
seem to have the 9.6/600 or the 6.v/600. I like the size of both but want the
extra life. Please e mail me as work is getting longer and longer and I am have
a hard time keeping up with the newgroups.

Thanks
Robert

I'm currently building a 6M dipole from some cut down 102" SS whips I bought at Radio Shack, but I have a question...

When I put the antenna up, should I put it vertically or horizontally? Does it matter? Is there a convention for 6M, depending on the mode used?

Please help, I'm in the dark here.

Most SSB, CW, and AM stations are horizontally polarized
and are running from 50.000 to 50.500 MHz.

Most FM is from 52.00 MHz to 54.00 MHz and are often vertically
polarized.

Most electrical noise is vertically polarized. So in FM mode
(which does a nice job of ignoring noise) being vertical
is convenient for mobile stations.

Once the signals bounce, polarization is anyone's guess. You
might try experimenting with rotating the dipole
for direction AND polarization. Signals that start out
weak might come up in signal strength dramatically (as would
your signal if you QSO).

Local FM work is almost universally vertically polarized. For working skip it doesn't matter much because the polarization is lost during the reflection in the ionosphere, but you may want to use horizontal polarization to reduce local QRM from the vertically polarized stations in the vicinity. Also, horizontal polarization is not recommended for groundwave because vertical polarization travels better over terrain. You may find a slight reduction in local man made noise using horizontal.

Thanks, all, for the help. It's mounted horizontally, for now... when I get the gumption up to build a better mount for it (mine's a Rube Goldberg construct) I'll probably play with the polarization some more.

-SSB

Subject: WTT: Mirage VHF/UHF amp for 6m amp
Message-ID: <20010723132734.26096.00000821@ng-df1.aol.com>
Xref: archiver1.google.com rec.radio.amateur:1858

I have a Mirage BD-35 2m/70cm (144/440) amplifier that I would like to trade
for a 6 meter amplifier. The 6m amplifier must be able to accept 5 - 10 watts
in. The output power is not too important, but it should be at least 35 watts
or more.

The Mirage amp has not been used by me and I can not verify it's function, but
I was told that it is in complete working condition and so it is guarenteed not
DOA. This amp retails for $135. Check out Mirage's website on it:
http://www.mirageamp.com/mirageamp/products.php?prodid=BD-35

PLEASE EMAIL ME PRIVATELY IF INTERESTED!!!

I've been running my yagi horizontally. "low band ssb/cw use". For dx
and the common sporadic E skip, it doesn't really matter much. For
local/ground wave type stuff, vertical is much better. But in my case,
I decided on horizontal because of #1, most everyone else is that way,
and #2 I think it does reduce the noise and crud I hear in my rcvr.
"ic-706". The 706 is prone to some crud on 6m, and I decided being as
most of the local commercial stuff is vertical, being horizontal would
cut that level about 20 db. I'm not sure if it helps on Ch:2 TV,
because they might be horizontal also. But overall it seemed to help.
Just switching from a random HF dipole used on 6m to the yagi was a
huge improvment due to the reduced HF images. The yagi is quite hi-q
and dead on HF.
I'm actually starting to enjoy 6m a bit now. And hear quite a bit of E
skip in the evenings. I need to get a rotor...I have to go out and
turn by hand . PIA.. :(I need to be able to turn on 6m as it's random

directions worked. The E skip tends to drift west as it gets later in
the PM. Or so it seems. I like E skip..Doesn't take much power or
antenna to do well. You'll see it on 10m many times when the bands are
dead to F layer skip. And can be any time of day or night. MK

Please read below quote.

"If you have received this message it is
because I saw a subject line that interested
me and when I downloaded the message
It was nothing more than your auction SPAM
and was NOT what the subject line said it was"

I would say that accurately discribes the events
NOWHERE in the subject line did you indicate
this was an auction.

Take a reading comprehension course

Just MY Opinion..

Bob.

FS: Kenwood 2570 in good condx, original box, mic, mobile bracket unused. The
radio was gone through by Grotn Electronics and has new driver and finals
installed. Brickwall receiver and 70 watts out. It will also take the VS1 voice
talker. It sits here idle so best offer. Has tone and memories too btw.

Hi All!

I'm hunting for a pair of IRFD1Z0 N channel MOSFETs. I'm trying to follow the Electric Radio Mods for the Heath Mohawk. Anybody got one or two? Price paid - no haggling.

Hello all;

I am looking to buy a alinco ar146 2 meter
mobile. Does anyone know if the ctcss decode
is included, some say the manual says only the
encode is included but comes with both?
and does this unit have a scan that will resume
when carrier ends without a delay?

and also I have a brand new just out of box
for testing

radioshack htx 242   441 channel with enc/decode
and scan,   and a htx 404 16 ch portable
with enc/decode, does anyone know how much i
could sell these for?
I am thinking of buying a ar146 and i am not
sure which is better for sensitivy and selectivity and scan speed that or my
htx 242?

any advice would be good?

thanks mediaguy@home.com

I paid $89 for my last HTX 242 from RatShak....it was a "shelf demo", in perfect shape. Ended up with a 2 year warranty, too. Recommend an external speaker...internal is pretty poor & causes some feedback (cheap construction?). However, for my company car, it works just fine. Decent cheap 2M rig.

No info on the HTX404....however, the HTX400s (much lower power out....250mW??) were selling for $49 at a recent hamfest. The 404 should be worth more.

HTH!

I still have for sale the TS830S Gold like new. It came from the final Kenwood
run in Dec 1985. Its had very little use and has been kept up to date ie fine
alignment and  twin cw 500 hz filters. I have the VFO 230 digital totally gone
through by Kenwood authorized Groton Electronics. I also have the SP230
matching speaker, MC50 desk mic, owners-shop-and IRC manuals, and original
packing and cartons. Its a beautiful setup and ofcourse one of the best running
and sounding standard rigs ever. There are cheaper 830s available without doubt
but not this one. This is well above the average 830's  fs with 100s of hours
on them. Frankly, I would never sell this but Im a qsk cw guy and just bought
an Omni 6 Plus. Please e mail offers. Thanks and 73s Lew K1NDV

There is a little. Some ssb in the low end of the band up to about
50.2. A litle FM at 52.525. A few friends of mine have been trying to
stir a little interest on 6m here. Myself, if I'm listening , it's
usually around the 50.125 ssb call freq. I'll move around a little
from there. MK

The 404 is about 2 watts or so with the battery, about 5 watts hooked up to a
power supply. I paid $75 for a used one recently. You could probably get about
$75- $100 for one.

I am looking forward to a long international trip in the future. 6 months to 1 year and am thinking of becoming a HAM so I can use a 2Meter radio. I know FRS and I assume GMRS radios cannot be used legally outside of the US. Can a 2 meter HAM radio be used internationally?

TIA,

Kirk

> Can a 2 meter HAM radio be used internationally?
>
Yes, as long as you have obtained a reciprocal license to operate in
the country you'll be in, and the radio can operate in that country's
2 meter allocation, and your license privileges allow you on that band
with your class of license in that country. You can't just take your
radio there and start operating, if that's what you're asking.

Many countries only have a 2 MHz slice of the 2 meter band, whereas we
have 4 MHz.

73,

Meade KA4RQB

Yes, in accordance with the reciprocal licensing arrangements
between your home country and the country you are visiting.
For some countries it's automatic; for some it requires a bit
of paperwork. For others it's a major hassle and probably not
worth it. Personally, I've been VE7LDH/W4, /W6, /W7, F/VE7LDH
and G/VE7LDH on various trips.

This is also part of the exam syllabus for a ham license.

for sale:

99 channel
uhf portable radios
model ICOM -F-40LT

enter all the information on the keypads  (keypad programmable)
ctcss codes
dcs codes
dtmf codes
scan function
alpha tags for each channel
units can be easily cloned with an optional cable (opc-444)
3 programmable power levels   1,3,5, watts out

these are highend portables in excellent condition
comes with good battery, software for computer programming, programming
manual
leather holter, new antennas and beltclips
```

these are presently programmed with 6 frequencies and can talk to eachother

225.00US each includes shipping via USPS insured

thanks

Is there anyone out there that has better instructions for programming the Heath HW24HT dual band HT? The manual I have is so damned confusing!!!!!!!!

The manual for my Icom HT was a pain in the *#&$ but I finally figured it
out, but I am having a hell of time with this radio. Can anyone help?

Hello - I've a serious problem! First , I 'll introduce myself,I am a
Amateur from the Netherlands .
So, maybe you can help me out.
I am looking for a specific type of manual, as the original
manual for the Yeasu FT530. What I really want is a copy of the
manual , it may allso in some sort of digital format, preferably Adobe
Acrobat PDF format or just in microsoft-word.

If you do has these resource, access to someone who does, or can
otherwise assist, I'd be interested in exchanging some email-P.S. sorry for
my verry bad englisch language!

If you own one of these 2-meter radio transceivers, you should be alert for unintended transmissions which can jam local repeaters and damage the radio. There have been several instances where hams discovered that the radio was transmitting without their knowledge.

One such incident happened July 11th on the 146.88 repeater in Raleigh, NC. A direction finder tracked down the mobile station within 30 minutes, saving the radio. But it (and the owner's face) were very hot!

Paul K5PF

Wow! Someone still has a Heath HW24HT!!   I had one around here somewhere, but I honestly haven't been able to find it in over a year. They were a great radio in their day. But yes, the radio is a bit tricky to program. Plan on keeping the manual with you if you expect to do anything more complicated than picking from among the channels you already programmed in.

As I recall the radio and the manual, it really wasn't a bad manual, it is just that the radio itself was a bit tricky -- when Standard designed the HW24HT it had features that no one else offered yet and you really did need to follow the directions step by step to get it set up properly. But, at least as I remember mine, it really did work if you sat down at a table with the radio and the manual; looked up each thing you wanted to program, and followed the steps. The steps were correct (more than I can say for several radios today) but the sections of the manual were not always in the order that a person would want to do them. I'd suggest reading through the manual to get an idea of what you can do and where each thing is in the manual. Then decide what you want to do (probably program the memory channels) and work through it by looking up the steps you need.

Since you HAVE the manual, let me suggest making a copy of the picture of the face of the radio with all the buttons marked. Laminate that copy and keep it. If the markings on the radio haven't already worn off, they will once you start carrying the radio around and using it.

Can these Icom F-40LT HT's be programmed from their own facia pushbuttons
or do you have to have it done via computer hard- and software ???

The HTX-242 has done a similar thing here.

Setup:
HTX-242 used for as an APRS tracker, TNC, GPS receiver all connected to deep cycle battery.

Situation:
I wasn't paying attention, battery voltage dropped below 10v. GPS and TNC were happy (Tripmate, KPC3+), but the 242 'lost it's mind' - either keyed up or stayed keyed up on 144.390 and hung, getting hot. Until I noticed 'crapage' on the home station, went out and shut it down. (got lucky - radio's fine)

Learned/Opinion:
I'd bet that pretty much any radio, with an improper supply voltage, can loose it's mind and do "un-nice" things. Time Out Timer (TOT) was enabled, but apparently as part of it's "lost mind" didn't kick in.

Question:
Did the 212 experience improper supply as well? Or did it just 'out of the blue' do this? Any other symptoms? Was the TOT disabled?

What kind of repeater doesn't have a short time out feature of about 2 or 3
minutes?! Most repeaters I have talked on will time you out of you talk too
long.. guess the repeater owner knows better now! :)

I have this new and unread RSGB handbook available, I personally brought it with me from my last trip to England in January and it is surplus to my requirements
The e-bay link is....

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1253884859

I also have some receivers that I am listing at this time and some Collins equipment next week

Thank you for your interest

Guess that you have never been involved in this situation.

The repeater will timeout but no one can use the repeater untuil the
station transmitting the signal goes off the air or the signal gets too
weak to hold the receiver of the repeater in. Then and only then will
the time out function of the repeater will be reset an dothers can use
the repeater.

Dear Group,

Situation... my parents have gone sailing (somewhere between NY an
FLA)... they have HAM, and I would like to contact them... can I do
this via my PC? (have sound card, speakers, mic, cable access)... if
so, what software do I need?

Or do I require my own antenna (and licence), in which case, should I
buy a real radio set?

TIA for any help,

Bonzo.

I sent this to the antenna "gang" but refered me to the other boards.

I know this doesn't pertain to antennas, but I don't know if there is any
forum to go for the information I am seeking. If there is let me know.
I belong to the Silver Springs Radio Club in Ocala, Florida and we are
thinking of building new fixtures in the club station for 6 to 8 operating
positions. We have the capibility for operating all modes and bands. I just
needs some ideas on some layouts. If anyone has some ideas or pictures of
some nice setups, or has any questions, you can cantact me at my e-mail
address I would appriciate the come back and thanks in advance.

I am looking for a quality radio. Like the Kenwood tk260, Maxon
sp-140, Relm mpv-32, Icom, Vertex and Smatrcomm scv-32. The problem
seems to be when I talk to a dealer they say that the one they sell is
the best quality and performance. Can anyone suggest a brand or radio
that would actually be high quality and performance? I am looking for
a small portable radio that I can use paragliging the Freqs will be in
the 151MHZ range.
Thank you.

Actually aside from the battery going south..... the radio is in almost perfect order!!! If there is a scratch on it, that would surprise me. Just need to figure out the steps involved in order to program it, set PL tones etc... just like I do on my other HT and mobile rig. I am comfortable now with both my Icom HT and my Radio Shack mobile to the point I could operate the damned things blind. (except for knowing what frequency I would be on in VFO mode)

I run mobile now and discovered that on 20M there are nets every where almost all the time! But since I can not "hear" all of them I found that I have to constantly check the freq. to see if it is in use by a net. So where can I find a "complete" list of nets and times and frequencies??

I did discover that 14.300 is the most popular of the 7/24 maritime mobile net, but they pop up other places too!

Do a web search for ham nets or maritime mobile, then send them an email of what you want. If your folks have their radio on, most likely they will be listening to the net and your message about contacting them will be passed to them.

Hi, I am looking for CAT software to set and control my two Yaesu radio's.
```

More as a back up of the setting, and easy way to program the memories.
Thanks, N5XIE

I am thinking about selling my ericsson edacs portable

800mhz
16 systems/ 16 groups

model KRD 103 124/a2
I was wondering what the value would be?

this is in mint condtion with a good battery and charger
i paid around 500.00 for it.
1 year ago

any suggestions?
thanks

I don't have specs on that supply handy.
You could try a little "Reverse" engineering. If you have the manual for
your radio it should list the power specs and pinout for the connector on
the radio. That would be the same as the power supply.

I use the wide setting most often. The 500hz filter is nice to
have when the going gets rough. I have tried a 270hz filter,
but it was so sharp that the radio sounded cold and sterile.
I just didn't like it

As you gain experience, you will be able to pick out the signal
you are listening for.

"Andrew Roos" <andrew@exinet.co.za> wrote in message
news:3B305C3B.FFC30F6D@exinet.co.za...
: Hi All
:
: I recently obtained my amateur license and am about to take the 12
wpm
: morse test. I have obtained a Kenwood TS-430S HF rig and want to
install
: one of the optional CW filters to reduce noise and interferance.
There

: are two different filters available: the YK-88C 500 Hz filter and
the
: YK-88CN 270 Hz filter. I would appreciate any comments which could
help
: me to decide which of these I should buy.
:
: For those who do not know the TS-430S, it has a wide/narrow filter
: selector. In CW mode, the "wide" seeting will always select the
2400 Hz
: SSB filter, while the "narrow" mode will select the optional CW
filter,
: either 500 or 270 Hz. This means one can tune up in "wide" mode and
then
: select "narrow" once on frequency.
:
: Also NB that I live in South Africa, where the bands are probably
not as
: crowded as in Europe or the USA.
:
: I would appreciate any comments, particularly those from hams who
use a
: TS-430S for CW.
:
: Best regards and thanks for the help
: Andrew ZR1IR

The FT-301 D has a VFO that tunes backwards. CW=lower, CCW=higher. If you use other rigs, it's hard to get used to, but that's the way Yaesu built it...

Anyone experience audio feedback on the Radio Shack 2M mobiles? I have 3 of them installed in different vehicles and all experience audio feedback at high volume, usually after the radio warms up from transmitting.

Looking for ideas on how to solve the problem.

Dave

Hello,

Can anyone tell me the pinout/voltages on the Molex plug for the
Kenwood PS30 power supply? I need to determine if my power supply is
defective because my 706-MKII is going back to Icom for the 3rd time
in 1 month for repair. Kenwood's web site has no info whatsoever.

Thanks in advance,

Jeff

Hello Dave,

My wife and I use a pair of HTX-212's (one base and one mobile) for the past 6+ years with no feedback trouble at all.   I am sorry that info doesn't really help you much......the mobile one is has it's power lines run directly to the battery.   We took no special precautions for grounding per say. It is fed to a Comet B-10M on a Larsen mag mount.

The HTX-212 run as a base has a heavy ground cable tied to a heavy copper bus bar across the back of the operating desk which all gear is tied to. it is in common with the AC service ground as well as a nearby outside ground rod. The equipment I used for the grounding is from J Martin Grounding Systems (in QST)

That is how we are operating here with no trouble......have you examined your grounding situation and power hookups?   I hope maybe something here has nudged you towards a resolution....good luck....

I use a 430 with the NARROW 270 cycle filter and love it. You dial in your signal, then click on the narrow filter and fine tune it to bring it into focus. Unless someone is right on top of your guy, you can't hear anyone else.

The only way I would think that you would get feed back is if there is
another radio on the same frequency nearby. The speaker should not produce
any sound while transmitting so you should not get feedback. Let me know how
you fix this. I'm curious of how this is happening.

Hi  Folks..
Anyone have any idea where one can find the specs/pinout for a Tait 3010
programming cable?
Thanks a lot for any info.

Jim

I have the same problem with mine. I thought it was feed back from the mike, but even with the mike unplugged I still have it. I tried it in the house on a PS and it still happens, I even tried different antennas without any success. It works fine at half volume or less, I don't get any

feedback. It also works fine with an external speaker. I assume it has
something to do with poor speaker shielding??? If you find out anything
please let me know as well. Thanks.

Sounds like microphonics. The vibration (audio) from the speaker is getting into the FM modulator (or microphone audio stages.)

Magnetic radiation from the speaker is just a bit too esoteric to be suspect at this point.

Moving to an external speaker pretty well isolates it. It's not a ground loop type problem with the speaker audio or it would continue with even with an external speaker. I'd take an eye loupe and start looking for a cracked adhesive bond somewhere in the microphone audio or modulator path.

Jeff
WA6FWI

Billy and Tracy wrote:

> I have the same problem with mine. I thought it was feed back from the mike, but even with the mike unplugged I still have it. I tried it in the house on a PS and it still happens, I even tried different antennas without any success. It works fine at half volume or less, I don't get any feedback. It also works fine with an external speaker. I assume it has something to do with poor speaker shielding??? If you find out anything please let me know as well.

Subject: WTT: G5RV and 2m quad
Message-ID: <20010625105218.24573.00001232@ng-ct1.aol.com>
Xref: archiver1.google.com rec.radio.amateur:1728

I have a G5RV antenna and a 4 element 2m quad that I would like to trade for either a dualband 2/6m quad, such as the "Comet" series or a VHF yagi that will work on 2/6m and must be able to be hung horizontally.

The quad antenna is the same one sold by "jacksa" on Ebay, such as the one in this auction: http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1248880226

I have had it for less than a year and it works great. It can be horizontally or vertically polarized (for SSB or FM operations). For complete information on the antenna, go to the above link for one that is current up for auction.

The G5RV covers 6 - 80 meters and is sold by "kerry@northnet.org" on Ebay. I bought this antenna recently but now it appears I can't really use it in the space I have. It's only been taken out of the shipping box, never even unwrapped.

If you are interested, please EMAIL ME DIRECTLY. Thanks

FS- Gonset Commander 160-6 meter 50 watt AM/CW mobile rig. Front panel good and
have paperwork for it. Have the 80/40 coil. Vintage late 50s early 60s. This
was Gonsets small mobile rig. This has a little door on the front panel where
the plug in band coils go. Unique and they sound vg on AM too.  $75.00

I have the same problem with my HTX-242 too. When I turn the radio up almost all the way to be able to hear a local repeater that has exceptionally low audio output I get this annoying whine, which sounds like low level feedback (the making's of I mean).

Aside from this problem, I have alot of good luck with the radio, but I do notice that it is voltage sensitive. Alot of the time on HIGH power mode, I must have the engine running, even though the battery in my truck is brand new. (power cables ran direct to battery)

Ryan, KC8PMX

Any owners of the new Kenwood handheld TH--F6A  tribander 144\ 220\ 440.
What is price level of this rig, and is it as great a rig  as i have
read! Would greatly value your reply.

PLEASE EMAIL ANY REPLIES! IT'S EASIER THAN GOING THROUGH THE NEWSGROUPS!

I have a G5RV antenna that I would like to trade for a 6 meter yagi. It must be able to be mounted horizontally.

The G5RV covers 6 - 80 meters and is sold by "kerry@northnet.org" on Ebay. I bought this antenna recently but now it appears I can't really use it in the space I have. It's only been taken out of the shipping box, never even unwrapped. Check out this one that is currently listed on ebay for complete info: http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1249798536

I do not have my license yet, but there is a burly blacksmith in my head,
pounding ideas and concepts into my brain, whhich has led me to some
questions:

1) How do I make a dipole antenna for the 2m band? In theory, it
can be done, but I need to know...

2) What ohm level should I have as far as coax? I'm
guessing 73, but I don't know.

3) Will it be good for DX? (Not on EME or OSCAR satelites, since
it's obvious those will be good for DX)

Take an asperin for the blacksmith.   You make the 2 meter dipole just like any other dipole. Two conductors about 19 to 20 inches long seperated by about half an inch. Trim for lowest SWR.

The coax should be 70 ohm stuff, but there is no problem using the 50 ohm stuff as the swr will be around 1.5 to 1. By the time you get to the rig the swr will almost be 1:1 with the 50 ohm stuff unless you have very low loss coax.

As far as DX , on two meters it depends on what you mean by DX. The 2 meter band is not very good for working DX on a regular basis.   It is possiable to use ssb and a good beam and a few hundered watts and work to about 200 miles or so regulary. It will open up to about halfway across the country very seldom but it will. I have worked Flordia and New York from North Carolina on 432 using 25 watts on two ocasions using a ground plane but that is very rare. While I have worked Flordia to Texas to the New York area from NC, I don't expect to do it very often. I usually use about 400 watts to an 8 element beam to do that with. Seems that I do get into the Cape Cod area much more than anywhere else from here.

If you want to work some DX, then get on 6 meters before the summer is over. YOu can work DX on many days now using simple antennas and low power.

Hello All,

I have a used HTX-404 that I purchased on Ebay. Radio works fine except
that the CTCSS (PL) tone level is to high.

I have search other posts and seen peoples description of adjusting VR1002.
The description describes this POT being located behind the TT pad under CPU
battery, accessible thru a hole in the shielded case. Well it looks RS has
a least to versions of the this rig. Mine has no POTS underneath these
holes in the metal shield.

My question is does anyone know how I might go about decreasing the CTCSS
level on my HEX 404 that does not follow the standard adjustments posted
here in newsgroups.

Thanks in advance!!

Doug Miles

Hi, Im looking for the #1 video tape, for the ARRL general exam. This
tape is no longer produced by ARRL/King Schools. I have the #2 and the
#3 videos, but somehow all the material on my #1 was erased!!  I realize
that this is not the current question pool, however it does contain
information helpful to one studing for the General. So if someone out
there has this #1 tape and would like to either sell it to me or make a
copy I would be interested. Thanks in advance.

Richard

After using Stu Olsen's (N7QJP) Voice Key Express I can say that it is one great piece of software. I played with several Soundcard based voice keyers in the weeks prior to Field Day and settled on Voice Key Express, and can say I made a great choice. For those of you who are considering purchasing a Voice key for contesting or even to save your voice from those long times between QSO's when hunting DX on a quiet band give Voice Key Express a try first. If you are set up for PSK or one of the other digital modes you are already set up to run VK Express, if not a simple interface made with parts bought a Radio Shack can have you up and running with this software and PSK/HELL/MFSK ect...
Consider the money you can save by registering a 10.00 piece of software over putting another piece of equipment into an already crowded Shack.
Stu has a 15 minute run time on his demo software but you can register it for 10.00 and that is a 169.00 savings over MFJ's voice keyer AND you get one more message then with the MFJ.
Stu's site is www.qsl.net/n7qjp Give it a look see and check out VK express.
Thanks Stu and great work
73 to all de KG4FET Sandor

By the way I am in no way associated to Mr. Olsen or his software EXCEPT that I am a happy user of VK Express

Professional-grade programs slanted towards radio amateurs. A variety
of technical subjects including simple coil and capacitance loaded
antennas, transmission lines, Pi-L networks, power amplifiers, ground
radials,

Small single files. Download in a few seconds each. Not zipped up. Run
immediately.  Enter numerical data. Obtain numerical output.

There ARE such things as free lunches after all.

hello
I need a cross reference to replace an old Burgess 22.5 volt Type 4156
battery
Can someone give me a cross reference to a newer available battery?
It appears the closest match is an Eveready Type 763, but the
dimensions are different
thank you
Bill McCann

In the way I think you mean on both rigs the answer is no. Both rigs are in
capable of retransmiting as a repeater if that is what you mean. Both will do
crossband TX/RX such as for Amateur Sats, but not as a repeater. This was not
a draw back as far as I was concerned when I bought my FT 100, however I can
sure see it's advantages when playing with the HT I just traded for as Xband

repeater and listening to a buddy of mine cross band from 440 FM to 6 mtr SSB
on his TS 2000.
73 and I hope this not stop you from buying an FT 100

Here we have another spammer. It misleads
in the subject line by saying this item
is FS "OR" For Sale "OR" misleads and
indicates said item is for sale when it
is actually FA = For Auction. The FA is
used by those of us that do not Do Auctions.
We set our spam filters for FA in the subject
line and we do NOT have to see the auction
spam. Do not trust this person.

"If they Lie in the subject line"
They will have no problem misrepresenting
the JUNK they have at the Auction..

If you have received this message it is
because I saw a subject line that interested
me and when I downloaded the message
It was nothing more than your auction SPAM
and was NOT what the subject line said it was.

Some of the Real Sleazy people will make
it look like a reply to another message.

Easiest way to avoid this message?
Do NOT LIE in the subject line..

Just My Opinion..

Bob

Take a chill pill Buckwehat,

Now, *READ* that subject line again. It simply asks, "Are you looking for...". Nowhere does it mention 'FS' or 'For Sale'.

Now, *READ* what you wrote, or should I say, form letter SPAMMED, again.

If you'd written a specific response about your desire for all 'auction' items to be labeled as such, you'd have a valid post. As it is - you're just another SPAMMER.

Since you read the post, the implication is that you *are* interested in said item. Your reply is a knee-jerk reflex to anything "auction", not the way it's posted. You may as well setup a bot that looks for links to known auction sites and SPAM USENET that way. Same result. Mmm, maybe that is the way you're doing this after all. It's mindless enough.

Even though I may agree with the idea that things marked "FOR SALE" that are really "FOR AUCTION" are mislabeled and misleading, your insistence at SPAMMING each occurrence is of no help to anyone but your own ego. Coupled with this particular SPAM that isn't even appropriate to the posting you replied to, you've earned yourself an honored seat in the kill file.

As the cranky biddy in black would say: "Good Bye"

<PLONK>

Does anyone know how to get an R2 apart so I can replace a broken display? The local shop wants 15 for the part, 150 for the labour. I think I could replace it myself, if only I could figure out how to get the thing apart. I've got the back off, taken out all visible screws, unscrewed the washers holding on the dial and the antenna connector, but the PCB's still won't budge. I don't want to force anything. Any suggestions?

Does anyone on here do any 70 cm FM work in the Ocean County, NJ area? I
recently bought an HTX-404 HT and am waiting for a 70 cm J-pole to arrive so I
can get on the air and wanted to know which repeaters to check out and what
simplex frequencies. My QTH is in Toms River, NJ.

I have a kenwood th-g71a which the "band", "lamp", and "1", "2", "3" buttons are not working. I have attempted to re-seat the ribbon cable which connects the two boards, but it did not solve the problem. Any ideas?

Thanks,
Scott

I currently have for sale the following old radio related books. Postage is for book rate within the US, at cost elsewhere. The books are:

Orr, William I. "Radio Handbook, 17th Edition" published by Editors and Engineers, Ltd. in 1967. Cloth. No Jacket. The 847 page hardbound book is in very good condition, clean with no page tears or pen marks other than a previous owners name stamp inside the front cover. Strong binding, nicely illustrated. Available for $8 plus $3 postage.

U.S. Naval Training Schools "Basic Radio Notes & Communication Circuits" published in Chicago: Original Wraps. No Jacket. The 147 page softbound book is in good+ condition, clean with no page tears or pen marks other than a previous owners name inside the front cover, and again on the page ends. The covers are a little chipped along the spine, but everything holding together nicely. Not dated, but looks to be c1950. Available for $8 plus $2 postage.

Hornung, J.L. "Radio Operating Questions and Answers, 10th Edition" published by McGraw-Hill, 1950. No Jacket. The 588 page hardbound book is in very good condition, clean with no page tears or pen marks, and a strong binding. Blue cloth covers show quite a bit of wear, but the cloth is not torn, and everything is tight and secure. Available for $6 plus $2.50 postage.

Siegel, Hy "All About CB Two-Way Radio" published by Radio Shack, 1976. Soft Cover. The 112 page softbound book is in very good condition, clean with no page tears or pen marks. Nicely illustrated. Available for $4 plus $2 postage.

If interested in any of the above, please email to "Oldbooks78@aol.com" to reserve. Thanks, and best regards.

Dave

Xref: archiver1.google.com rec.radio.amateur:1672

I have an Icom V68 2m HT, 2m amplifier, and a Radio Shack HTX-404 70cm HT with speaker mike that I would like to trade for a dual band 2m/440 mobile or base radio.

The Icom 2m HT has all the standard "bells and whistles" to include 40 memory channels, the ability to change between channel numbers and frequency display, optional CTCSS board installed and TX capability from approximately 136 - 172 mhz. The actual coverage may be a little more or less. This radio came from the factory with this capability, it is NOT modified! I don't have the charger for the 2m HT, but I use my Maha universal charger and it works fine!

I don't have exact specs on the amp, but with the approximate 2w in from the HT, I get about 30w out with the amp. Has FM/SSB and Pre-amp settings.

The HTX-404 is in very good shape and includes rubber duck antenna, speaker microphone, original manual in good shape, wall charger and new battery, better than the original battery.

Please EMAIL me if interested.

Selling my last edition run 5mil+ serial TS830S. It has very low time on it, looks and runs 100%. Was checked and tweaked by a certified technician/ ham.
BRO
This is the best Ive seen. Also has twin 500hz cw filters .
Also available-Digital VFO 230 gone through completely by Grotin Electronics authorized Kenwood repairs.

Have MC50 as well. All items like new, original cartons, owners and shop and IR manuals. Also have the SP230 matching speaker. Package or offer for separates considered. Thanks and 73s Lew KlNDV

hello all,

i think i have a problem with my new mobile radio and a call to kenwood didnt help much.
the problem im having is recieving stations with
2 to 3 S units according to the radios meter break the squelch and it allmost set full clockwise.

i keep turning the squelch up, it stops for a while and then it starts
opening again ..

anyone else have this problem or heard of it ?

is there a VR control in the radio to set the squelch ?   i know there is
one for modulation, already tweeked that one up some.

Thanks for any info

Jim , N2ZVG

Here we have another spammer. It misleads
in the subject line by saying this item
is FS "OR" For Sale "OR" misleads and
indicates said item is for sale when it
is actually FA = For Auction. The FA is
used by those of us that do not Do Auctions.
We set our spam filters for FA in the subject
line and we do NOT have to see the auction
spam. Do not trust this person.

"If they Lie in the subject line"
They will have no problem misrepresenting
the JUNK they have at the Auction..

If you have received this message it is
because I saw a subject line that interested
me and when I downloaded the message
It was nothing more than your auction SPAM
and was NOT what the subject line said it was.

Some of the Real Sleazy people will make
it look like a reply to another message.

Easiest way to avoid this message?
Do NOT LIE in the subject line..

Just My Opinion..

Bob

Could be done, but slowly.  The typical mp3 file is several megs
and on HF, you're limited by FCC rules to 300 baud.  You'd die of
old age before the transfer was complete.  On VHF I've heard of
9600 baud which would be tolerable if you have lots of patience,
but then you're local only.

On the other hand, the FCC prohibits amateurs from broadcasting
"music"; whether an mp3 file qualifies is bound to start another
long, long discussion.  :-)

Nope, that's not broadcasting music. Plain and simple.
And the rules regarding broadcasting are to prevent amatuer frequencies
from being abused with full time pseudo broadcast stations.
(Images of Gene Scott carrying on about salvation and his race horses

It could not be any worse then listening to Dana Pretzer OR
"The Danish Pretzle" on "Sattellite Radio"

---------------------------------------------------------

Hold on there, pardner.  Are you sure a streaming mp3 file isn't
"music"?  Granted, 9600 baud would result in jerky playback, but
it could be done, couldn't it?  Music can be broadcast digitally
as well as in analog form.

OK.... so it "can" be done.

I have a General class license but haven't been active for
YEARS.... don't even have any equip.

However..... I have always wanted to give packet radio....
and digital radio in general a try..... but know nothing abt
it.

Can you point me to a web page with instructions on how to
do the MP3 file xfer thing?

OK.... I know xfering MP3 files might be slow.......
but..... since packet radio equip..... once it is bought and
paid for.... only requires a little electricity to stay
on..... who cares if it "plods" away all night xfering MP3
files?

I mean.... MP3 files are big now.... wouldn't this be a way
to get kids back into ham radio maybe?

Actually..... I guess the over all question is..... can peer
to peer networks be established using ham radio technology?

That would be http://www.tapr.org to see what's currently going on
in packet and to forrage for other links.

I think it would depend on whether or not it was a matter of streaming audio or actual file transfer. If someone were to simply send a file in binary form them it wouldn't really qualify as broadcast any more than someone sending a picture of the family over packet radio. If the person in question were playing streaming audio, then I think it would qualify as a broadcast and would, consequently, fall into the realm of illegal activity. Of course, then you would have to look at the whole controversy of sharing mp3's in the first place. If a ham were to start sharing copyrighted material over the amateur airwaves, Riley Hollingsworth might take an interest in said activity....

OK.... like I said .... I have  General class license but
haven't been active for YEARS... so outta touch.

However.... I hate to see ham radio dying a slow death
caused by the Internet.  So was thinking maybe trading files
would be a good way to pump life into it

---------------------------------------------------------

It would be fun to trade files by ham radio, but the internet is
far more efficient, especially for the large mp3 files we're
talking about.  And, as JWheeler pointed out, Mr. Hollingsworth
might be interested in copyrighted files being transferred.

Hi All

Just a note to let you know that the website of VK2CA's Australian Amateur Radio has changed it's domain name URL
It was at vk2ca.com - It is now at:

http://www.vkham.com

Australia's largest online listing of VK emails and URL's, repeater,
adverts, prefix maps, link and much more.........

Cheers....Allan VK2CA

I have an Icom V68 2m HT, 2m amplifier, and a Radio Shack HTX-404 70cm HT with speaker mike that I would like to trade for a dual band 2m/440 mobile or base radio.

The Icom 2m HT has all the standard "bells and whistles" to include 40 memory channels, the ability to change between channel numbers and frequency display, optional CTCSS board installed and TX capability from approximately 136 - 172 mhz. The actual coverage may be a little more or less. This radio came from the factory with this capability, it is NOT modified! I don't have the charger for the 2m HT, but I use my Maha universal charger and it works fine!

I don't have exact specs on the amp, but with the approximate 2w in from the HT, I get about 30w out with the amp. Has FM/SSB and Pre-amp settings.

The HTX-404 is in very good shape and includes rubber duck antenna, speaker microphone, original manual in good shape, wall charger and new battery, better than the original battery.

Please EMAIL me if interested.

Check out http://www.eham.net/reviews. They have a very good reviews section
where you can get the pros and cons of both radios.

Go to www.eham.com and read the user reviews on each radio. From what I can
tell, the 706 is a clear winner.
A lot of people have been having some serious problems with the FT-100's.

Can anyone give me any information on 70cm operation in Ocean County, NJ,
specifically the Toms River area. I recently picked up an HTX-404 and will be
hooking it up to an external antenna. I was wondering if there are some good
repeater frequencies (I've found about 3 so far) and simplex frequencies. I am
also interested in any linked 70cm repeaters as well.

I've been looking at both reviews myself and although the FT-100's had some bad problems at first, it seems they fixed 'em with the FT-100D. I've also talked to some people online about the two radios and the FT-100D's seem to be gaining popularity. The early problems with these radios seems to have tarnished the image of the current version of the radio. This is similar to the problems of the original 706... they had lots of initial problems, but have been fixed.

Now the FT-100D seems a good contender against the 706 Mk IIG...

Both radios are OK, & there are no current major "problems" with the 706G or 100D, but here are some actual "facts" that you may not be aware of just reading internet reviews:
FT-100D comes with a lighted multi-keypad mike...that is about $135 option on the 706G
Ft-100D includes built in TCXO, & CW filter...both are $100-some-odd dollar options EACH on the '706.
FT-100D includes dcs (DPL) enc/dec...Unavailable on the '706
FT-100D receives out to 960 MHZ.......450Mhz or so on the '706, & can't be expanded.

Both radios are currently about the same price (give or take $50 or so)...but if you factor in the above........The FT-100D wins in my book. Also the ability to add Yaesu's "self tuning" ATAS-100 antenna (440-40 Meters) is another Yaesu plus unavailable for the '706..........

Hi Everyone,
For weeks now, I have been tauted by the frustration of having my
radio sitting
on a work bench and not be able to find the problem which I hope is an
easy one, but maybe I've overlooked something that is staring me right
in the face.
Here's the problem:
If on the 160M band(example) than my frequency readout for the low end
of the band should read about 1.50000 Mhz., Right. As I rotate the
main tuning knob from left to right (clockwise) the numbers in the
display should get higher, Right.
And when the tuning knob stops indicating that I have bottomed the VFO
drive mechanism the display should read about 2.00000 Mhz., Right.
Wrong! as I go from left to right instead of the numbers getting
higher, their actually get lower in value. This makes the 100Khz.
position display do nothing but toggle from 0 to 9 over and over.
So here's the question:
Has some component in the VFO oscillator circuit, or the counter mix
unit, or the display logic circuit gone south causing the numbers to
decrease instead of increase? It's a fact that 99.99% of all the
radios ever built in this world all work the same, that frequency
whether analog or digital increases as you go from left to right. So I
need the help of an individual out there whose got the tech savy to
give me an idea, a tip, a suggestion, or even a slight hint of what
may be going on with this display problem.
Let me tell you, I feel kind of stupid even asking this question
because I'm sure many of you out there are probably saying to
yourselves; "what kind of cheap drugs is this guy on" but like I say
in the beginning of this posting, I've been trying so hard to find the
problem that it may be something so simple that it's been laughing
right at me and I haven't even noticed.

Thank you for your patience while you read through this short novel
and I hope someone out there will have a very logical and simple
answer to this problem.

Sincerely,
Joe Tuero

Hi All

I recently obtained my amateur license and am about to take the 12 wpm morse test. I have obtained a Kenwood TS-430S HF rig and want to install one of the optional CW filters to reduce noise and interferance. There are two different filters available: the YK-88C 500 Hz filter and the YK-88CN 270 Hz filter. I would appreciate any comments which could help me to decide which of these I should buy.

For those who do not know the TS-430S, it has a wide/narrow filter selector. In CW mode, the "wide" seeting will always select the 2400 Hz SSB filter, while the "narrow" mode will select the optional CW filter, either 500 or 270 Hz. This means one can tune up in "wide" mode and then select "narrow" once on frequency.

Also NB that I live in South Africa, where the bands are probably not as crowded as in Europe or the USA.

I would appreciate any comments, particularly those from hams who use a TS-430S for CW.

Best Regards
Andrew ZR1IR

Hi Joe
Did it ever work the opposite (or conventional)way ?
I friend has a FT 901d and it works as you describe, counterclockwise to go up in frequency, The rightmost digits do change 9 through 0 not just toggle between the two.

Prozac sounds like he needs to take some of the medicine he's named himself
after!!

Must be because his OPTICAL and his RECTAL nerves are crossed,
giving him such a CRAPPY outlook on life! ;)

Don't get mad at me because "The Ham of Today" has no clue how to test SWR. This is from a General Class operator, I am sorry If he was a lowly Cber he would know how to check his SWR, Reg who cares if he was using FM, are you saying you don't check swr on vhf. The first thing you should know when you buy any kind of transmitter is how to check the swr, vhf/uhf/hf it makes no difference. How can you be interested in radio and take the general exam and not know how to check SWR, If you guys think this is normal I hope everyone enjoys the hobby with the New Breed entering. It is absolutely pathetic.

I think that it is Pathetic to be of the mindset of: You don't Know... You are Stupid.

Driving, you get a License & get on the road. Then, you actually learn.
Buying a home, you buy, THEN, you learn how to fix things.
Owning a buisness, you buy it, THEN, you learn the nuances.
Riding a bicycle, you get skinned knees.
Walking, you fall.
Talking, you learn, CONSTANTLY.
Psychiatrists get a degree, THEY STILL DON'T KNOW WHAT THEY ARE DOING UNTIL THEY MESS UP 100 - 200 PATIENTS.

Where in life do you not learn as you go on?
I actually like to HELP people. I think that a Ham license is just that. You are Privelaged to talk on the radio. We are here to HELP others learn & improve.
Chastising like you do will do NOTHING for the Ham Community.

Enjoy your Misery. But, please keep it to yourself.
Ed G.

Do you check SWR on FM VHF/UHF ? I see you skipped that one. Spoken like a
true technican.

<<Do you check SWR on FM VHF/UHF ? I see you skipped that one. Spoken like a true technican.>>
If you remember my first post, you will remember that I build Amps... Yeah, I do check my SWR.
As I said, I had a Great Mentor when it came to Radios & electronics... He taught me alot. I also build alot of antennas...
I have built at least 40 different antennas in my days w/ radios. more than alot of Extras that I personally know.... ;-]

Does anyone out there have a copy of the shareware program PC Route (Printed Circuit Board/Routing program) for making printed circuit boards.   I had an early 90's vintage version of the program (I believe it was PC Route 5.0) but through the years misplaced it. I created some PC Board with it and now need to make some modifications, but no way to edit the files. Please let me know if you have a version perhaps you can E-mail it to me as a Zip attachment.

I know of CBers and Extra class hams who don't know how (or care to know)
how to set swr.

>Reg who cares if he was using FM, are you
> saying you don't check swr on vhf. The first thing you should know when you
> buy any kind of transmitter is how to check the swr, vhf/uhf/hf it makes no

I keep my meter inline all the time just because I'm paranoid, or maybe it's
because of my anal-retentiveness :)

>How can you be interested in radio and take the general exam and
> not know how to check SWR,

The same way some of the Extras in this area did it. (BTW we're talking
20+ WPM extras to boot) And I've heard them ask over the air how
to do it (or if they needed to) from some of their buddies.

>If you guys think this is normal I hope everyone
> enjoys the hobby with the New Breed entering. It is absolutely pathetic.

Some of the "Old Breed" don't know any better either. They just happen
to be able to memorize the test Q&A and learn code easy, it don't mean
they *ACTUALLY* know anything about the radios they talk on, just
that they could *pass the test* which is all any of us has to do to be here!

The point of this is; if the guy is asking the question, at least he is open to
learn about radio and is trying. The only stupid question is the one not ask.

```
That's not it. The pre-amp works on the base amp because I have used it with
the base radio. With the HT, it doesn't make any difference. Anyone else got
any ideas?

I have used the older version with good success(1.2)  on a 486 80 desk top.
This would be about the minimum that will work.

Wayne,

Thanks for the reply. I have logging software but have always been in the dark on how to use the old paper dupe sheets. I was looking over the paper logs for Field Day this year an decided that I had better find out how they work, in case the computer decided to take a weekend break :)

Ok check on 14.190 to 14.210 in the late evenings,Lots of stations calling.
Also from 3790 to 3800 although in the high part of the cycle the conditions
```

are not the best for DX,ing
Dont forget 15 and 17m, try 21.290 to 21.310...and don't get desperate.
Theres is some good DX Nets on 15 meters at +/- 21.350 around 17H00 UTC

A little off topic but does anyone know if a Radio Control Transmitter on 27MHz FM modulation could be used with a 27MHz AM receiver . I cant find a suitable AM transmitter and already have an FM one. Will this work and if so will there be any implications to its operation

Thanks in advance

John Fisher

I obtained a TRIO JR60 receiver (very similar to the HE80) in a non-working state some time ago and now have it showing signs of life on all bands except the 144 MHz VHF
section which remains stubbornly dead - although the set generally does not seem as sensitive as one that I had several years ago.

As all the oscillator trimmers have needed substantial "adjustment" to get the thing working on any of the bands and I suspect that something similar will need doing for the 2 metre tunable IF - the trouble is I have no alignment information and can't even make a guess as to what the IF should be as all the markings on the VHF oscillator crystal are unreadable.

Please can anyone help with alignment details and the trimmer layout (for either the JR60 or the Lafayette HE80 as they are both so similar apart from the VHF section) so that I can align the receiver front end and possibly get the sensitivity back to what it should be like, and possibly even a circuit
diagram or user manual ?

Also, does anyone know a source of paint which will match the original blue colour of the case - mine has been badly repainted in black at some time!

73,

Keith, G8HXE.

In a word John. No. FM (Frequency Modulation) has little to do with AM
(Amplitude Modulation). To each it's own.

>I cant find a
>suitable AM transmitter and already have an FM one.

Then you'll have to find a suitable FM receiver.

> Will this work and if so
>will there be any implications to its operation

No implications coz the two items simply won't communicate properly, although they may interfere with one another and any OTHER receiver on the same "channel" in the area.

Greetings!

Up for sale is a Dentron MLA-2500 160-10 meter amp! This one peaks at 1700 watts, and will do 1,200 all day long! Excellent cooling fan! I've run it all night on 75 meters at legal limit and it's cool to the touch! Pending divorce and subsequent move to apartment living (Ugh!) forces the sale of this amp. $795 plus shipping gets you an AWESOME desktop amp that is fully capable of legal limit. If you need a pic, e-mail me. I purchased this from Murray, K5MDM of Radio Ranch fame, so you KNOW it's good! (Kudos to you, Murray...you've never let me down yet!) Anyway, not a mark, scratch, or blemish on this one, and performs 100%!!! There are NO issues with this amp, and it is absolutely trouble free! Payment to be either via Paypal.com or USPS Postal Money Order only!

No 'fraid not

>and if so
>> will there be any implications to its operation

Yup - it won't work
>>
To be a little more elucidatory - AM stands for amplitude modulation. The frequency of the radio carrier signal remains constant but the amplitude (size) changes. FM stands for frequency modulation. The amplitude of the carrier remains constant but the frequency varies.

The latter system is more reliable and noise resistant but AM was easier to implement and pre-dates FM.   The circuits needed to generate and receive the two systems are very different and incompatible.

You're all wrong!

Yes; it will probably work, although I doubt it will be as effective as an FM receiver would be.

By slightly offsetting the receiver, you may well find that the AM receiver can resolve the FM transmitter's modulation by means of slope detection. It rather depends on the receiver having an IF filter which corresponds to the modulation index of the transmitter.

Slope detection is a perfectly reasonable way of demodulating FM providing the modulation index of the tx is 1 or less.

What I REALLY like about your post Chris, is the use of words like
"probably" , "doubt", "may" "rather depends" etc in order to get your
point across.

Now can you state categorically that an FM transmitter WILL function
properly and effectively with NO problems when used in conjunction with
an AM receiver?

Beav (already knowing the answer)

You can E-Mail me at the usual place (Beavis at nachos dot demon dot co dot uk)

Or you can visit my website (Which has undergone recent surgery) Same address as
before..

What do you know?

If it was the other way round, ie) an AM transmitter and FM receiver, I would not even suggest trying. But slope detection is a perfectly valid way of demodulating FM under certain conditions.

We don't even know the application - if it is for model aircraft control - forget it - but if it is for, say, garage door opening then I would sure as hell give it a go before forking out on a new receiver. Does your mind only operate in black and white - the answer to this question is positively "grey". Perhaps you are an academic???
 ;-)

73 and thnx for your very helpful contribution.

Chris

Hello all,
I am selling several hard to find Ham Clocks; reads off the time in any
country, at any time of the day.
All are discontinued. Very desirable and will look great on your table with
your radio gear.
Please email me for prices and pictures.
Thanks

That's a question if ever there was. What do I know about what? Radios?
Models? Wimmin? The list is positively ENDLESS.
>
>If it was the other way round, ie) an AM transmitter and FM receiver,
>I would not even suggest trying. But slope detection is a perfectly

Conditions suitable for flying RC models under? Remember he did post to
a few RC groups.

And would you think our intrepid 27 meg AM-er knows what slope detection
is, know if his Tx does, know if his Rx does?
>
>We don't even know the application - if it is for model aircraft
>control - forget it -

Which is basically what everyone but you has already said, but you're
going to show us all just how wrong we are aren't you? And I suggest we
DO know what application he's looking at. RC control of a model. I'd
even go so far as to say it's for a radio controlled car, but I'm like
that. I read the headers.

> but if it is for, say, garage door opening then
>I would sure as hell give it a go before forking out on a new

If it was a garage door opener he wanted, I wonder why he didn't cross
post to alt.garage.door.openers.

> Does your mind only operate in black and white -

When it comes to models, you bet your arse it does.

>the answer
>to this question is positively "grey".

Well if you're happy then we're ALL happy, but I certainly don't want a
model being used around ME "controlled" by a radio that sits positively
in the grey area.

>Perhaps you are an academic???
> ;-)

Oh I'm that, and more.
>
>73 and thnx for your very helpful contribution.

Think no more about it, and rest assured that I'll do the same with your
information.

Beav

You can E-Mail me at the usual place (Beavis at nachos dot demon dot co dot uk)

Or you can visit my website (Which has undergone recent surgery) Same address as
before..

One crystal is the I.F. Filter..the next is the second L.O. The first L.O.
is around 46Mhz. the formula is 3X 46+the I.F. frequency. All you need to
change is the first L.O. crystal.....and retune the front end.......Lumpy

Message-ID: <20010611094200.29300.00000328@ng-cc1.aol.com>
Xref: archiver1.google.com rec.radio.amateur:1657

I recently purchased an HTX-404 and did the frequency "mod" - acutally it's just holding down some keys and typing in a number. It expanded the coverage from 440 - 450 to 430 - 450. Has anyone had any problems after doing this mod? Does it still work correctly on the entire band?

Hello everybody:
Forgive me if I make some mistakes, i normally speak dutch, so...

I have a question ..
Can somebody tell me which one recieves best?
Is it the TH-28 (or TH-48) or TH-G71??

I was using my cell phone today and it didn't sound like regular interference. I suspect I was jammed because I heard a loud screech plus static. Was I jammed?

Hi,

I am interested in the above two radios from Drake. Either complete or
parts. Please email with details. Thankyou.
Nick

ACARS Log Analyser for Windows is now available for download from
http://acarsonline.terrashare.com

This program will allow you to import ACARS message logs and view/print them
in a variety of ways and provide statistics for your logs.

Cheers,

Mark Avey

I ordered a 24 hr wall clock (crystal/analog) from MFJ a few
months back for $30+/-. The first one arrived UPS with a
hand broken off. I snail-mailed it back. Second clock
arrived. Hand broken off again. I took it to UPS. Third
one arrived. I opened the box FIRST that time. Hand broken
off. (Suppose they were sending the same one back each
time?)

Now...nothing. No Clock. Just silence. MFJ long ago
banked my credit card money. Too late to protest.

MFJ's not on the Web. No 800 number. Head in the sand?
Incompetent? Mom and Pop gone south? Anybody know
anything?

I'd appreciate news. Thanks anyway.

Dick KJ1O

Hi,

Does anybody have the maintainance manual for the Racal ra1772, in particular the circuit diagrams. I'm am looking to buy a copy (original or photocopied). Can anybody help me please.

Mike

Hello all!

I have a license question, and would appriciate any insight you can offer.

I am a licensed Ham Radio Operator. Last week I used the FCC web site to renew my license as it would have expired in a few weeks. When I renewed my license my class changed from "Tech Plus" to "Technician".

I was wondering: Since I passed a 5wpm code test when I got my Novice
License can I skip the 5wpm test for general class license? ie...
can I get a General license now with just a written test (since I have
already passed a 5wpm test)?

Thanks in advance for any help. (To reply via email remove "N0*SPAM*"
from the email address below.)

Yes. Just pass the general written and you are a General class operator...

I am the host of the VHF All Mode email reflector on Yahoo! groups. If you are
into VHF ham radio (6 meters and 2 meters), any mode, please consider signing
up for the email reflector. All discussions of VHF ham radio are welcome from
the new ham running an HT and an antenna made of coax to the EME moon-boucing
ham with the mega-antenna farm. If you wish to sign up, do one of the
```

following:

1. Send a BLANK email to vhfallmode-subscribe@egroups.com
2. Visit http://www.yahoogroups/group/vhfallmode

Hope to see you on the reflector!

okay looking for a new HT (only had license for 6 months so I am learning still) can't decide between an ICOM IC-T81A or the YAESU VX-5R. The Icom has more transmit but the Yaesu has a larger receive so I wanted to hear oppinions on them both.

Thank You

I "think"   the ICOM   t81 was pulled from sales,  but can't confirm it
yet.   O also am looking for T81   quad-band     I 'hear' comments
saying they are great 4 bands,  but some problems....no idea 'what'
problems.   Someone locally said noisey tx and ICOM re-called them.   I
have heard good from the VX series unit,  but you might want more power
and features.    AL

I am considering a KMA5054 antenna for use on 6 and 2m. The webpage says it
works on 2m. Anyone have any experience with this antenna in this fashion?

I am trying (unsucessfully) to locate info on how to use a dupe sheet before
Field Day this year. Does anyone know of a resource on the web that explains
how to use them? I "think" I just place the last 1 or two letters of the
call sign in the appropriate colum. For example, if I contact N1AB, do I
simply place a 'B' on the log sheet as show below? (sorry about the ASCII
art :)

```
     1A     1B    1C ...
------------------------------------
1 |   B    |       |
   |         |       |
   |         |       |
-------------------------------------
2 |         |       |
   |         |       |
(etc)...
```

Best 73's,
Jim

The IC-T81A has not been pulled from the market.

Your choice of HT depends on what you'd like from it. The Icom has 6m/2m/440mHz and 1.2gHz capabilities, the VX5R has 6m/2m and 440mHz with wideband RX. Both rigs offer 5 watts on the bands they share and the Icom gives you 1 watt on 1.2gHz. Both rigs also allow you to listen to the public service frequencies around 2m and 440mHz as well as the FM broadcast band.

If you'd like to experiment with 1.2gHz and there is activity in your area, then by all means go with the T81A. If you'd prefer wideband RX, then your choice would be the VX5R.

I've never heard of any "noisy transmit" problems with the T81A and Icom has not recalled them. The only problems with this rig have been with the battery retaining clip, which would break on early models, as well as the T8. The Yaesu VX5R did suffer from howling audio at high volume levels (which has been corrected) and because of the die cast aluminum case, it gets VERY hot if you transmit on high power for long periods of time. (The T81A also gets pretty hot, but since the case is plastic [but the chassis is aluminum], your hand is insulated.)

I've got a T81A and like it. I was lucky enough to get an early model with wideband RX (50-1000mHz, cell blocked), so I did get a "bonus" with mine. Unfortunately, this feature has been disabled on post April 2000 models.

Hope this helps.

73,
Scott

It used to be 13 WPM in the US...

That requirement was dropped to 5 WPM last year.

This is response to the events revolving around my question, " Was I Jammed" posted on 5/24. This message does not pertain to any specific person in this newsgroup, but to someone who obviously was following me or answered me on another newsgroup, and to inform everyone that this and other alt newsgroups ARE indeed monitored in some form or other.

I asked if I were jammed. I didn't accuse anyone or any one company (although I have my suspicions). I was treated by a close friend of that company as if I had a lot of nerve for asking such a question. I then had it rubbed in my face about the clarity of the cell phone, which after two years of daily discussions with this person using the very same cell phone and never once did he bring up the discussion of clarity although he always knew I always used that same cell phone. I find it quite a coincidence he would talk about the clarity of the phone immediately after the jamming incident. This bit of harassment tells me that the jamming was intentional, and I may add highly illegal. I'm not a ham radio person, but have read about ham radios and what can be done with them. What I heard is exactly what I read is called to be 'jamming'. Then why did I ask this and other radio newsgroups if I already knew? Because you are the experts. It would be nice if I had a person supporting what I read. Harassment for a non-threatening question is evidence of stalking and, in this case, jamming. I have freedom of speech. I will exercise it in order to acquire information. I WILL NOT be harassed off of ANY newsgroup. If this is a problem to any company, take it to court - I'll probably win!

See thats the problem with a great deal of americans ... for some reason you think someone is out to get you, well believe it or not ... noone knows who you are and noone cares what you do nor what you talk about on any given day. You are not that important.

You don't even use a real name or a real email for this very reason, well guess what, again, you are not important enough for anyone to waste time on.

Why would anyone spend the time and money to monitor your calls and "jam" one that you make.

To let you know, in the states, regular people can't even get scanners with the cell band in tact let alone a transmitter for that band. Now certainly someone could build a transmitter, but to have one that would handle all the local repeater frequencies, and to be able to find you specifically, I very much doubt it.

And again, this has squat to do with amateur radio.

And, to show your paranoia you use a different name in the packet group (cindy).

I have the T81A and most reports are that I am full-quieting if I am within reasonable repeater-range. Works well on 2M and 440, not much on 6M and the 1.2 is most in more urban locales. My ICOM's T81A and R2 make a great team for traveling. NOW, to save money, you may wish to consider the Q7A, which gives you wide receive, 2M and 440 xmit, and makes a good scanner (if you don't care about 6m and 1.2). Can't help you on the VX-5R, but when I was first licensed, I was making the same choice as you are making now.

Stalking is a very real problem on the web, but when your employer or a company sees this as an opportunity to harass employees or a company sees it as an opportunity to harass people, I have a right to warn people. It seems you are the paranoid one. Anyone in this newsgroup would be happy to know about such happenings and to be forewarned of their breach of security. It seems to me that either you are one of the stalkers and harassers in this situation or you approve of such. This isn't an issue to cause an argument about unless you are the harasser. Why would you defend harassers. Next time I'll start naming names instead of being nice and discrete.

well it does sound good...but the low power 300mw would be restrective in
range wouldn't it?
  I live 70 miles from chicago so would a 6 meter be worth it?
 I have a 2 meter now (midland 73-005a) and often have to use 3 watts to hit
repeaters in this area.

The major reason for using a dupe sheet is so you can quickly check to see if you have worked a particular station before during the contest. Using your method will work, but will slow you down when looking for a call. Most hams I know (that aren't yet using computerized logs) simply put the entire call in the box. Your eye will pick up dupes a lot quicker that way. There are many computer logging programs out there for cheap or free that will take care of all that for you. If at all feasable, use a computer, it will save you tons of headaches. N3FJP has a great one that our club has been using for a couple of years and it is free (but we send him a few bucks anyway to encourage him to keep up the good work). Check out his stuff at www.n3fjp.com. Hope this helps.

Subject: USA hams with call suffix 8C, 8C-, or 8C- - please respond
Message-ID: <20010530223838.29743.00000078@ng-mo1.aol.com>
Xref: archiver1.google.com rec.radio.amateur:1591

I would like to hear from US hams with the call suffix of 8C, 8C-, or 8C- -. I mainly want to hear from those who are into contesting and DXing. What I am wondering is if anyone with this call suffix has gotten any cards from the 8C manager/bureau lately? I am fairly new to the 8 bureau, having gotten my call last summer. I DX and contest alot so this past Feb. I sent envelopes and postage to the 8 bureau. As of yet I have not gotten anything back. My husband, who is also a ham, has already gotten 2 envelopes full of cards. As we work mostly the same stations I should have that coming too but as I stated I have gotten nothing yet. Is it common for the 8C manager to take this long to deliver cards? I have repeatly tried to contact the 8C manager but have heard back nothing to this date. Any help or info you can give me would be greatly appreciated! As I don't get a chance to read the newsgroups please respond direct to me at: NZ8C@aol.com. Thanks!
73,
Renee NZ8C

Nope... it was 13wpm, but it was dropped to 5wpm... no more 13 OR 20wpm. 5wpm gets you all the way to Extra with only the General and Extra written exams (no more Advanced exam)... All part of Amateur restructuring by the FCC.

Your right. when there is "stalking" or "jamming" present, everyone, including hams, like to know about it. How ever that was not the tone of your second post. I think that you should go back and re-read Rob's post. He(?) was merely just trying to quell your concerns. You are right. If you are being jammed, it is by a company because they are the only ones that

would have the recourses available to do that. If it were a single person, I
would be very surprised. In the end, if you truly believe that you are being
Jammed, then buy a new phone, and change your service. The new phones make
it *VERY* difficult to get jammed. New service gets you away from the
person(s) who were jamming you.

Folks,

Instructions for SWR meters and HF rigs are sketchy about the correct procedure to make an SWR measurement.

If the rig has SSB capability, is the measurement made with AM or SSB?
How much power should be applied?

Does SWR depend on operating MODE at all?

The ARRL operating manual, and all instructions I have read are SILENT on these basic questions.

Does anyone know where a good on-line treatise on the subject is?

I am relatively new to HF and am cautiously trying to match a random wire to a TS-440s (with antenna tuner) via a homebrew Transmatch that also has a built in SWR meter, roller inductor, and three variable capaciters.

I do not want to damage my rig.

Any advise would be helpful.

Thanks,

Bill, KC0IZI

The best way is to use something like the MFJ-259B or Autek AF-1 antenna analyzer as they are calibrated at a very low power level. It is difficult to measure swr in the ssb mode as the signal level varies. Use either CW or AM at the lowest power level that your particular meter is accurate at and keep transmission time to the shortest possible period to ensure you do not overheat the finals in your radio or produce interference over the air. Try to tune the random wire to the center of the band you are operating in without the TS-440's antenna tuner turned on that way you will be able to use the TS-440's tuner as you move around the band and not have to touch the transmatch. Other than that as long as the mode is legal on the portion of the band that you are checking and you check to make sure that no one is operating you should have good luck in getting the antenna tuned. 73's Bob N4BK Hartselle, AL

Usually in CW... but the SWR would measure the same regardless of mode. It would be far easier to take an accurate measurement using a steady signal like an AM carrier (no modulation), FM, or just CW

> How much power should be applied?

As little as possible... <10 watts, if your meter has a lower scale.

> Does SWR depend on operating MODE at all?

NO! It will 'appear' to vary as you modulate the output if you use SSB or a modulated AM signal.

> I am relatively new to HF and am cautiously trying to match a random wire
> to a TS-440s (with antenna tuner) via a homebrew Transmatch that also has

In general, most tuner's instructions tell you to start with the caps 'centered' (or meshed 1/2 of the way for air caps)... then tune the inductor for lowest SWR on the band of choice... then tune the caps to tweak the SWR lower.

A good way to start is by 'centering' your caps with the radio ON (recieving) and then tune the inductor for the best signal stregnth (of the recived signal)... that will get you pretty close.

High Quality Low Wattage Switching Power Supplies: 5 Vdc, +12 Vdc
```

```
and -12 Vdc.  Smaller versions of the technology used in PC computer
power supplies. Each comes with a PC style power cord and each is
contained in a sturdy plastic case. Functional Condition, just add your
own power output wires.

These units are EXCELLENT for experimenters or to replace
"wall-warts".  I use a 25 watt to run 3 SuperCircuits PC23C surveillance
cameras, a 17 watt to run a tiny FM transmitter, another 17 watt powers a
infra-red PC transmitter interface, and a 25 watt is running my computer
speaker system. Anything a wall-wart could do, these do 1000% better
since they are switching supplies with surge suppression/noise suppression,
and excellent voltage regulation all built right in! You CANNOT even
come CLOSE to buying the parts to build one of these, let alone the whole
thing with a cord for the price. AND I test to see each one is putting out
the
3 voltages before I ship.

Two types:

5 VDC @ 4A, +12 VDC @ 1A, -12 VDC @ .6A 25 Watts MAX $8 each.
(weight w/cord: 1 Lb 6� oz)
5 VDC @ 2A, +12 VDC @ .8A, -12 VDC @ .4A 17 Watts MAX $6 each.
(weight w/cord: 1 Lb. 2 oz.)
----------------------------------------------------------------------------
Really Thin Speakers:
These speakers are 8 Ohm, and rated .4 watts - 75� Ea. (weight: 8 grams)
----------------------------------------------------------------------------
LAN Patch Cables - NEW, Packaged:

I have a question. I have an amp for the 2m HT I use in the car. It has a pre-amp, but it doesn't seem to make any difference. When I brought it inside and hooked it up to my base amp, I get the same thing. Any idea why this would be?

Off hand Id say the pre amp was not working!
Make one more check on some one else's radio.
Take it back to the store.
What kind of amp was it?

This is the problem with Amateur Radio these days. You are a General Class
Amateur and don't have a clue about one of the most simple fundamental items
about radio. I am sure you just memorized the questions without
understanding what you were reading. Ok you may be new to H.F. but swr
measurements are the same for any band. what did you do before?

I just HAVE to say something !!!
If he started on a VHF license, he probably used FM. Did ya think abut that?
I will tell you that I happened to have learned ALOT about Radios while a "Lowly CB'er" !!! I built all sorts of Antennas & audio enhancing devices. I also built 14 different Amps. etched my own boards & everything. How about 4KW PEP available 2-30 MhzHOMEBREW mobile amp? Even most Generals & Extras tell me it's IMPOSSIBLE !!! WEll, now I have been a VHF licensee for 3 years & LOVE 6 Meters. I converted a few of my Amps to 50 Mhz. Oh, the knowledge I did that with was learned BEFORE I got licensed.
I took my written exam & passed to General W/OUT studying or looking in a book.

Maybe the person had an interest & took the Exam & CODE (whick many people whine about) & PASSED. Hey, Maybe, now he wants to LEARN !!!

A Driver's license is issued w/ VERY LITTLE EXPERIENCE !!! New drivers are the highest percentage likely to get into accidents !!! THey can KILL people very easily !!!

People get a license, then, they learn by DOING. I happened to be quite the tinkerer. I was also lucky to have a Great mentor about Electronics & Radios.
Maybe he doesn't have that.
Maybe he's a computer programmer that will discover a new Digital mode?

WHY DO YOU PUT A PERSON DOWN FOR TRYING TO LEARN SOMETHING THAT THEY DO NOT KNOW?

Well... Another rant done... Sorry if I offended anyone, but this kind of attitude just really should be outlawed !!!!

I must say that I agree. I am the same way. I had no Elmer to help or even
guide me. Now I struggle along trying to learn etiquette here, technique
there, ect. When I make a mistake and some one points it out to me I am
grateful and I apologize. Yes I *WOULD* have preferred going with an Elmer,
but it seems like that is more and more becoming an archaic word(To bad
too.) Yes I did just memorize the q and A's but I did so to get on the air
and try to meet my prospective Elmer who would help me get at least my
general ticket. Oh well. that has not come around yet.

I am strongly leaning toward purchasing an Alinco DJ-- G5TH dualbander.
I like the look and features this rig has, and the price is decent. I
would appreciate owners of this rig letting me know their satisfaction
level with this model, and of any disatisfaction they may have with this
rig. Thanks

>are
>on the 50 Mhz band?

Yup, although not nearly as much as the 2 meter band. It depends on the area
you are in. 52.525 is a good place to listen. If you are going to hear any 6m
FM work, that's probably where it will be. There's also SSB work being done,
which you probably won't be able to listen to on your scanner unless you've got
a real top of the line model.

Any comments positive of negative on the Cushcraft 13B2 2 meter beam.
I need to replave my beam that got damaged in a recent storm. I am
also looking for a beam with maximum gain as I have been playing
around with satellite work and ISS.

Outside they look identical but there must be a difference because the 257
can modified to open up the TX and RX. The radio shack cannot be modified.

Hi all,
Trying to find a UT-63 sub audible tone unit for an Icom IC-W2E handheld.
Anyone have one of these they can bear to part with, or know anywhere I may
be able to obtain one? Apparently Icom have stopped producing them.

Thanx in advance

dunch.(return address spamtrapped).

I have a 13B2 here and have been pleased with the way this antenna has
preformed vs the 6 el quad I had up before. It has a great set of ears even @
42 ft I can pull out signals that I could never hear before. It has been a
pleasure to work 2 mtr SSB with this beam.

Now on to the Sat beam. I use a Cushcraft A270-10s and for the LEO FM birds
and also for for a couple of the pac sats with PSK and it works great. It is a
5 el on each 2 mtr and 70cm and will pick the sats up as soon as Nova says they
are rising and will hold um until they are gone.
I do have it up verticle and although I do get some fade on the birds becuase I
camnnot change polarity but if is not enough to stop me from working the birds.

The RadioShack HTX-10 Service manual will do just fine. The only difference is the non-modifyable version of the LSI chip behind the faceplate. All other main board & alingment/components are the same..

Subject: Will this jam an amateur repeater?
Message-ID: <20010501001434.13228.00000154@ng-fw1.aol.com>
Xref: newsfeed.google.com rec.radio.amateur:1492

I have no intentions of doing this, but I came across this schematic of an
amateur repeater jammer. It appears to be a clandestine device which claims to
"shift" the frequency by 600 Khz. Will somebody please explain how this circuit
shifts the transmitter over to the repeater input? I don't see any possible way
it can happen.

FREE:

Satellite dishes 8' 10' 14'. Commercial quality dishes. Azimuth controllers feed horns and hardware included.

I planned to make use of them but do not have the time to work on the projects.

I would like someone who could use them to take them away for free. You must bring a good size pick up as they are pretty big. They are taken apart and are in halfs so they should fit in a 1/2 or 3/4 Ton pick up.

If your interested contact me via email and I will give you my telephone number so we can further discuss.

I'm located in Sacramento, CA

Regards,
Don W6PJJ

Hi everyone!

I just wanted to pop in and say hello. I recently got my Technician Class license (3 days ago actually). I took the test April 24th. It's been very exciting. I can't wait to build my first antennae. I am studying for my 5 wpm morse and general license. Any tips on the best "free" software out there for studying my morse code? Thanks!

Heather,
Congratulations! I just upgraded to General a couple months ago. About the

Morse Code: If you are interested in ever using it (i.e. want to get it faster than 5wpm) then look into the Koch method of learning it. If you learn with this technique from the start, speed is not a problem. It simple starts you by sending 2 characters in random order for 5 min. at 15wpm. You learn by reflex rather than disection of the dits and dahs. When you get 90% accuracy you add one more character. You continue unitl you have them all and low and behold you're at 15 wpm. I'm re-learning with this technique so I can use the stuff on air (re-learning is more difficult than just learning it fast to start with). They say you can do this with the program SuperMorse, but I couldn't get it to work right on my machine. I found this web page that is bare bones but works great for me:
http://www.vmeng.com/minow/MorsePractice/MorsePractice.html
Good luck on General. I have really enjoyed the HF bands. It is way too fun.

Allen

CPU Reset Procedures
This is a list of CPU resets for most ICOM radios. CPU reset returns the radio to out-of-box condition: all memory channels are erased, all items in the set mode returned to default values, and all VFOs cleared. CPU reset procedure usually involves turning the radio off, pushing and holding specific buttons, and then turning the radio back on while still holding down the button combination. Some newer radios have a

Our City has recently moved public safety to 800 MHz. They have asked our RACES group to sell old (but working) 460 MHz radios. (PD cars, motorcycles, base).

Before we just went to the local swap meet, wanted to test the waters to see if there was any interest via the internet.

We will use our website to show pictures of equipment. Drop me an email if you might be interested.

All crysals have been removed.

I recently purchased an Icom W--32A handheld.
I love the look, feel, and features of this rig , but the battery life
between rechargings seems unusually short .Trying to determine if
charger or battery has a defect, or if thats the way it is with this
radio. I would very much appreciate responses from Icom W32A owners
regarding this. Thanks

Hi Heather,

I suggest you unsubscribe from any of the rec.radio.amateur usenet groups and use the time to get on the air and have fun. Here, most of the posts are negative and are not necessarily a good picture of what ham radio is all about.

73,
Rory N7CR

I am looking for a decent dual band HT with 5+ watts and wide-band RX. I am considering these radios:

Alinco DJ-G5T
Icom IC-W32A
Kenwood TH-G71A
Yaesu FT-50R

I am looking for something in the range $150 - $300. If anyone has any idea of which radio is best or if I can get a better radio than those in that price range, please email me at MooseGuy529@aol.com.

Thanks,

Tom KB1EVZ

Yeah--I need help sifting through all the stupid Evidence Eliminator postings.

Evidence Eliminator is total trash--not that I downloaded it or anything--I
just can't stand the posts about it... It messes up good newsgroups!

Any idiot knows Microsoft does not log your clicks on the Start menu or
anything stupid like that...

Please stop posting about it!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

I still have for sale 3 good classic rigs:
Eico 723 50 watt cw 80-10 meters, works well , nice panel-meter-chassis. $75.00
Gonset Commander mobile am/cw rig-6-160 meters in very decent condx with manual
copy-$100.00

Very rare Transcon 10 am/ cw trans/converter mobile rig-10 meters-about 10
watts and has a converter in it for the car bc radio. Very small for that era.
ER had writeup. $75.00 with paperwork-decent condition as well.

TS440SAT loaded, mint, original owner, Serial 9.7 mil series. Has the built in
antenna tuner , narrow sb 1.8 filter, narrow cw 270hz filter, vs1 voice talker
module, dc cord, hand scan mic, orig cartons and manual. Condition is near
new-won't be a disappointment. I used it as backup in my shack and never
mobile. It was factory authorized upgraded at Groton Electronics ie diodes, bfo
transformer, and I had a new memory battery installed at the same too. I'd
say theres not more than 50 hours on it since new. asking $675.00 . Its a super
radio in all modes. Thanks 73s Lew K1NDV

Message-ID: <20010506222943.12798.00000654@ng-fw1.aol.com>
Xref: newsfeed.google.com rec.radio.amateur:1512

Does anyone know if a 1614 is a substitute (military, perhaps?) for a 6SN7? I have a signal generator that uses a 1614 for a oscillator/amplifier tube. The documentation I have for it shows a 6SN7-GT, but the tube and the label beside the socket specify a 1614. Is this a direct substitute? I can't find a 1614 in any of my reference or tube tester material.

Thanks,

Barry - N4BUQ

Make that a 6AL5 double diode, not a 6SN7. I was thinking of the wrong tube when I wrote this.

in brief the osc at the left of the diag is around 600 khz, this is
mixed with the repeater signal in tr2 which is no more than a mosfet in
a mixer config and the result is repeater freq + - 600 khz ... a device
like this placed very close to the repeater would cause a jamming effect

RADIO FLEA MARKET in BEETSTERZWAAG.

The flea market takes place to - 26 May 2001. Do you look for an exotic transistor kit or a super recipient, fixed and do manufacture kit... or do meet of radio friends? Dan comes Saturday 26 May to the Friese radio market into Beetsterzwaag!

Many thousand visitors come each year from the entire Netherlands and Europe to this radio flea market spectacle, approx. 100 dealers, with most diverse articles, like senders - recievers - power supplies - antennas - software - hardware and literature.

Additionally of businessmen in the place also a flea market with many attraction organized for large and small. There is unfortunately no sales desks free on the radio flea market more, but you can reserve suburb, announce, for the year 2002. Is possible also by telephone & email, contact on to take with the executive committee. Down are these addresses.

How does one find Beetsterzwaag? From direction Apeldoorn = > Zwolle = > Meppel = >
Heerenveen = > Drachten, departure after Gorredijk Tijnje comes departure (28) Beetsterzwaag.

From direction Bremen = > Groningen = > Drachten = > Heerenveen, departure after Drachten Haven comes departure (28) Beetsterzwaag.

On 2mtr, 145,650 Digi Meppel and 145,700 Digi Joure can one to instruct leave themselves. Inlet is from 09:00 to 16:00 MESZ, into which Cafeteria one also boarded into this time.

This whole is organized of VERON FRIESE WOUDEN. Cordially Welcome in Friesland on the FRM!

Contact people, are:

Your best bet is to pick up an ARRL Handbook and have a look at the projects inside. If you want a cheaper prebuilt unit, consider buying a used Heathkit VHF watt meter off Ebay.

cheers
skipp

I also have a W32A and soon found that it is indeed a "battery hog" . I found it seems to help (slightly) if you turn off one reciever and listen to only one band at a time. Also if your W32A is equiped with a ni-cad battery pack, be sure to fully discharge the battery before recharging. There are NMH (nickel metal hydride) battery packs available which are less fussy about charging, but they are more expensive. Thats just the way it is with the W32A, but a great radio in all other respects.

Free:

Satellite dishes. 8' , 10' and 14'.

I planned to use them but got married and now I have no time for the projects.
Plenty of Honey do's now.

Feed horns, azimuth controllers and hardware included.

All taken down so they can be transported in a pick up truck.

Located in Sacramento, CA Send me a email I will give you my phone number so I can give you details and directions.

Regards,
Don, W6PJJ

Yes they sure are at least out here in Sacramento, CA. I can hear 3 repeaters and some remote bases on FM and operate SSB myself. Plenty of SSB activity on 50.125 around here.

Would prefer the "President Clinton staff model"
"it really puts out" and is "Frequently Agile". <G>

just my opinion..

Bob

The last version of VE3SUN's Dx Monitor & the latest version of the Viewer add-on are available for download from
www.ozhelpservices.com/dxmonviewer.htm

Togethe they allow easy display of the dx cluster data from the OH2 cluster plusWWV values...
Dx Monitor must be running for the Viewer to obtain data but it allows simple selection, band by band, of DX spots, plus bearing info if desired, alerts by prefixes or calls, 50MHz beacon list generation... Try it..

Hi,

Anybody else have this problem w/IC-706KMII: Intermittent transmit on 2m (any mode). Antenna is known good. Of course, it's out of warranty.

Any suggestions?

thanks in advance,

Jeff

Hi!

I need to obtain proof of pre-1987 issuance of my license, WA6QMH, as I wish to upgrade when I renew. Current records only show the last renewal in 1991.

Anybody out there have an old Callbook that they might be able to fax a page from? Original date of issue was sometime between 1975 to 1978 as I recall.

Thanks!

Jim WA6QMH

Hi there,
I am interested in the above two radios from Drake. Either complete or parts. Please email with details. Thankyou.
Nick

I am looking for the following for my "new" JST-135:

BWC Unit CFL-243
RS232c Interface Unit CMH-741.

Any help in locating these appreciated.

Ray, G4NJW.

$285?????  Hmmmm after the ILLEGAL modification to this rig, that completely
cancels out the warranty, (at least with most manufacturers that is) This
radio is only worth about half that.  Why would an amateur radio operator
need with a radio that is only legally usable on 28.000-29.7000Mhz anyways,
that has been tampered with??

This amp is a 4-pill type amplifier, and is very clean on SSB.

It is a Pirate 500 base amp and will do 500 watts.

This amp is very clean and works great.

The price is set at $265.00

If you have questions or want a picture, please e-mail me at:

Qsk694@yahoo.com

P.S.

Please disregard all the butt heads on this newsgroup that put amps down.

We all know that sometimes it just to hard to be heard and sometimes you need a little extra power.

Hi,

Anyone have info on the above? In particular, what voltage does the radio output to the tuner via the RF feedline and does the radio send any control data to the tuner? A schematic/circuit diagram would be great.

TIA,

Roger Basford

Hi guys - just turned the rig on, and all rx'd signals are not staying on frequency! They're going up & down constantly, at least several KHZ, even though the display is NOT changing at all. This just started today. Otherwise rig is fine, and always has been.

Any service guys out there with any ideas where to look? I'll take the cover, blow out any dust, and check for loose connections, including grounds. I'll try any suggestions short of taking it in for repair.

Thanks

Mitch

I recently upgraded to general and got myself a used rig. It's a Yaesu FT-902DM running to a GAP Titan DX. I'm running through a PDC 600 meter set and I bought a MFJ dummy to use for "tuning up". I think I have some problems but I haven't seen some of these subjects addressed so I'll ask.
1. When I tune up on 10 meters my meters tell me I'm putting out about 80 watts, when I actually key the mike, an Astatic d 104, I get about 50. Each band that I drop down seems to decrease my readings, by the time I get to 80 meters I'm only putting 5-10 watts into the dummy. From what I've been able to read, if anything power should be higher on the lower bands and decrease at 10m.
2. Regardless of mike gain settings or positions of any of the switches I can't get the built-in meter to swing more than half scale. I've replaced the battery in the mike. I am also unable to get the vox to work.

I have a new set of finals but haven't tried them as the "good" output on 10 meters has me thinking they should be OK. I don't have another mike to try but would be willing to get one if that might be the problem.

Any thoughts on what's happening?

Thanks,
Ken
KJ4JTO

And it's a damned good Chipswitch too. I have had one of these for the past 6 or 7 years and I still have mine It's acually my third one after the first got stolen,, I made the mistake of selling the second and finally I bought a brand new HR-2510 about 3 & 1/2 years ago. They are a far cry better than either the standard HR-2510 or the opened up modification.

I'm looking for a 36VDC (400ma ideal, but I'd take anything 36V at this point) wall transformer to charge three 12V sealed lead-acid batteries wired

in series. Does anyone know where I can find a wall transformer like that?
If one is not available, would it be safe to connect a 24VDC transformer and
a 12VDC transformer in series?

Hello....I'm just returning to Ham radio after a 5 year lull (although
I have
had occasional contacts during the lull, primarily on 10 and 2 meters
mobile).
I've just recently connected my old TNC to my 2 meter HT and am
surprised at the dearth (to put it lightly...I've received NO signals
to date) of activity in packet. The last time I used packet it was
still fairly active.
I've been monitoring both 144.95 and 145.05 but no signal yet. Which
frequencies are most active in the Cincinnati area? I used to hang
out on the above frequencies as they were fairly busy but not too
busy. Granted, my setup isn't optimal. I'm using an Alinco DJ-560
with an AEA 5/8 wave telescoping whip as my rig and antenna, but given
that I live on the third floor (top) floor of our apartment building,
I would expect to receive at least the occasional signal. Has packet
been replaced by the internet to this degree? I hope not...I miss
getting the ham news via packet and hooking up with the occasional ham
for a 'live' one on one chat.

You can connect them in series but it is not save to charge batteries by
just connecting a power supply across the battery

No, there's not much activity any longer. The packets are all gone to
TCP/IP via the Internet.

2x18V, 30VA transformers are easy to find, but as Dan says, you'll need
some current control particularly with sealed batteries.
Then put the gear in your own wall box.

My friend picked up an sb220 recently. It has I believe a Canadian version HV
transformer which is open cased. The color coding on the  primary wires is a
little different than the standard USA xfmr. Anyone know the difference?  The
amp has a prob and I believe its transformer primary wiring error. Thanks Lew
KlNDV

The Canadian Government has removed the 12 wpm code test for full HF
privileges. Now the only requirement that is required for full HF operation
is a 5 wpm test.

Can anybody recommend a small trickle charger to charge and maintain
12V 7AH Sealed Battery?  I just want to maintain a charge over long
periods of time.  The battery does not get used very much but when I
want to use it once a month or so, I need it fully charged.  Once the
battery is drained I would want to charge it back up again and if it
takes a full 2 days to recharge, that is ok.
Thanks in advance, Richard .

Hey all!

I'm a college student in upstate NY. Want to do a signal processing project using the BCD data stream from WWVB (broadcast on 60KHz) out of Ft. Collins Col., problem is that my rig blew up during a lightning strike, and now I have no way to receive the signal. I was wondering if I could talk any of you guys in or near Colorado into recording a few minutes (3 to 5) of clean WWVB signal and emailing it to me at tannerpa@clarkson.edu or p_a_tanner@hotmail.com . WWVB has no vocal announcement, it's only AM DSB-SC modulation carrying a PWM BCD data stream. You'll know you got it if you hear a pulse every second. I've tried contacting WWV by telephone, as it broadcasts both vocal announcement and BCD data, however the telephone signal is the vocal announcement only. Best results probably at night. I'll send $20 to the first person who sends me a useable wav file, for their time and effort, and to express my appreciation!

73,

Pat Tanner

Hi and thanks for reading this. I just recently purchased an AT-180 from an estate sale. Unfortunatly it did not come with any documentation, although I did see some documentation in my 706Mark II G manual. It did not come with the standard interface cable , instead it came with a cord that is about 20 feet long. My first question is ;

Do I have to split the harness coming out of the 13 pin din. In other words have 2 of the wires go to my keying circut for my linear and the other wires go to the AT-180 ?

Which pins on the 13 pin din control the At-180 ?

Thanks in advance.
Bill,wr2m

Looking for a schematic and/or service manual for a Fujitsu Ten
Unlimited, Model FTP40-292H. It is currently tuned at about 460 Mhz.

Any info would be greatly appreciated.
Thanks,
John - KE6EJS

Subject: Repeater Controller Suggestions
Message-ID: <20010421205404.25300.00000495@ng-mh1.aol.com>
Xref: newsfeed.google.com rec.radio.amateur:1439

Hello:
I'm looking at purchasing a new Repeater Controller with the following options. Anyone have any suggestions ?

The Repeater Controller would have the following available:

---

1) MDC1200 Decode/Access. This would allow access to the repeater system.

2) CTCSS Decode/Access. This would allow allow access to the repeater system.

3) DTSS (Dual Tone Squelch System) Selective Calling with Page. Use to be sold with most Kenwood and other ham radio transeivers. Decode/Access. This would allow access to the repeater system.

4) Carrier access function. No tone to bring up repeater.

5) A way to disable the Courtesy Tone so that a person can just "key-up". Similar to a commercial repeater system. No-Courtesy Tones

I really don't need Auto Patch or any other bells and whistles. I could sure use some help from the folks out here. I've been looking all over the place for a Repeater Controller, but none have come close to what I want above.

Thanks,
Dan

Hello folks,
I think the kenwood TK 208 can be programmed via the key board.But
how?
Anybody tried it out. I want to add a 2M repeater on to it.

Thank you all

I decided to let a few radios go to make room for my Omni 6 Plus coming in a
few days. I have in near new condition with very low hours on it a TS440SAT
with the 270 hz and 1.8 KC filters, the antenna tuner, and the voice talker
VS1. Its never been mobile and I am the original owner.Also an MC60 and the
stock scan hand mic, the original box and packing, the DC cable, and original
manual. This is an excellent radio ie hot receiver and great ssb audio as well
as vg full qsk. Im going to now let it go to the best reasonable offer. I can
take Paypal and I can also bring it to the Hoss Traders flea market in NH in a

few weeks. 73s Lew K1NDV

I have played with both and went with the TS. I had the 746 and the 847. The DSP on the 756 sounds so crummy to me. I didnt like it at all. The scope is neat but i wont use it its called turn the vfo for me. And I like the versitility of the 2000 the upgrades for it will be via Firmware / uploads via computer. Why do I need to buy a new rig just buy the upgraded firmware. Why hasnt the big 3 come up with this 10 years ago? Who knows. Ten Tec does it the with the Jupiter. For me the choice is hands down the TS for its many options and for not having to buy filters. Its a good rig. And I can assure you I will get my DXCC with this one.

 Given some of the previous posts about the emissions from this rig,
have you had any problems or reports from local hams, or neighbours with
TVI etc ?

 Regards,

 Howard. M0HAD

Hi Howard,

IMD does NOT cause TVI, it causes splatter on adjacent frequencies. Since splatter is masked by stronger signals or noise, it is best tested in a controlled environement. That's why the tests are so important.

We have gradually been accepting poorer and poorer rigs for use. Keyclicks and splatter are on the way UP, that is definite.

The TS-2000 is a large step towards more deterioration in spectral purity of our rigs. Personally, I hope they never become popular or they are corrected and at least brought back to the same specs as most other radios.

We may never return to the spectral purity of something like a Collins KWM-2 (we are now about 15-20 dB worse than that in the typical rig), but there is no reason to accept constantly declining transmitter close-spaced performance. The TS-2000 is another 15 dB in the wrong direction.

I can get better IMD performance from a class C amplifier, so I have to wonder what engineering mistakes they made.

Since I live in a quiet rural location, and work weak signals, this problem is very evident to me. It may not be evident in other situations, that's why testing is important. The numbers don't lie, and the TS-2000 is the worse radio to hit the market in a long time.

Shame on them for ignoring IMD performace.

73 Tom

Try ACLog.  I have been using it and other logging software by Scott Davis,
N3FJP, for quite some time now and am very impressed by it.  Check it out at
 http://members.aol.com/snkdavis/page1.html .

You might also look at LogEQF.  It is available for download on most ham sites.

Hope this helps.

Try ACLog. I have been using it and other logging software by Scott Davis,
N3FJP, for quite some time now and am very impressed by it. Check it out at
 http://members.aol.com/snkdavis/page1.html .

You might also look at LogEQF. It is available for download on most ham sites.

Hope this helps.

Tom your nuts that thing has TX bandwidths of 2.4 to 3.0khz. Seems to me you
are just one of many that like to rip ass on new rigs out. But whatever. I
am happy with my rig and thats all that counts. See you on the DXCC list.
And as for collins i dont want the over priced drifting equipment in my
shack. I will stick with my crummy IMD rigs any day and guess what I will
stay or beat you any day on what I have here next to the collins. I have to
admit the audio is nice sounding on those tanks.

In testing the TS-2000 has the higest transmitter IMD of any radio on the market today, by a large margin.

Anyone who understands IMD would know that it doesn't mean the audio "sounds bad". All it means in this case is the spurious garbage outside the required bandwidth of the transmitter is maybe 40 times higher than that from other rigs.

We need cleaner radios, not dirtier ones.

With attitudes like yours it's no wonder radios click and splatter more than they used to. The manufacturers don't need to worry because people will accept deteriorating performance with question.

It isn't MY fault they have a poor design. Don't blame it on me!

73 Tom

Possibly more proof that Kenwood is courting the CB crowd? (They could care
less about IMD - even if they knew what it was)

I suspect it is more proof that engineers know less or care less about what acceptable performance is, rather than intentional.

You can see examples of this creeping into the CW sections of rigs, where they call the ratio control "weight" and provide no means of adjusting the weight...which people commonly want to adjust....and instead change the ratio of dot-to-dash which no one in their right mind wants to change.

Same think with keying waveforms... and more important bandwidth of CW transmitters.

They must have customers who buy a radio without knowing or caring if it really doesn't work as well as it should, or doesn't have needed features. I'm sure the manufacturers don't get enough constructive feedback demanding they clean up transmitters and receivers and add useful features like a weight control for CW.

When I told a certain manufacturer their top-of-the-line radio had leading edge overshoot to 300 watts on key closure (even when power was set to 50 watts!) and had no weight control their marketing guy responded "no one cares, no one works CW anyway..and all radios have power overshoot".

Personally, I want to buy the cleanest radio I can. I worry about blocking and IMD performance, and how it might bother other people, more than I worry about 10,000 stacked memories or extended double DSP.

Like new TS450/SAT with YK-88C filter (500 Hz CW, $130 new) installed. All functions are perfect and cosmetics are 9.5 out of 10. Includes factory packing, mike, power cord, manual. Never been "tampered with". Asking $695 plus shipping to ConUS by way of your choice.

Also have matching Kenwood MC-60A desk mike ($140 new), $95.

$770 for both radio and desk mike.

I need a smaller rig for the dash of the RV.

The ONLY trade I'll consider is for a "like new" 706MkIIG. Will ship on receipt of US Postal Money Order, or when your personal check clears. Will "double box" the original packing to keep it safe.

Email me if you have questions.

My father left me with a huge assortment of tubes and tube-like devices like CRT's.
I am trying to determine their value and use. Some of them are military surplus and are still in original boxes. A partial list follows:

GE Jan-12GPZ
Raytheon RK-65 K2588
Sylvania Jan 3BP-1
Amperex 221-A
GE Jan 872-A
Jan 250TL
Heintz & Kaufmann VT-127-A
RCA 3CPI crt
Taylor 866
Western Electric Jan 725A
Pioneer 5TA-75

If you can point me in the right direction on any of these I sure would appreciate it.
Thanks, Rob

I have this radio that I am in need of a schematic. I posted this question on another newsgroup and the response I got was to purchase the

Radion shack HTX10 service manual. I guess this radio has the same guts
inside as the Magum 257???

Any comments??

Thanks!!

There are several on-line vendors of tubes where you could get 'ball-park'
values on what you have. Try going to Yahoo and doing a search using the
string 'vacuum tubes' or 'electronic tubes' or similar... you'll get lots of
websites to look around. One I found was...
http://www.vacuumtubes.net/page/indexc.html but there were MANY more.

Agree 100% on the flaws in some of the newer rigs... anymore, I think the
manufacturers look for cheap 'marketing' gimmicks versus real
improvements... it's far cheaper to add a bit of memory for marketing
purposes.

Have you heard about eQSL.  It is a web page which allows you to create your
own QSL card send it over the Internet.  There is an article about it in CQ
magazine April issue.  If you are interested go check out this web site:

http://www.qslcard.com/qslcard/

You can also try eQSL web site.  It is a web site which allows you to create
your own QSL card and email it over the Internet.  There are 205 country
already signed up for it and it is growing every day.  If you are
interested, go check out this site:

http://www.qslcard.com/qslcard/

Hi All,

Just bought a Yaesu FT-757GX that has been unused for
about 6-7 years therefor backup battery is dead.
Question is, where inside the rig is this battery?

I am not an amateur radio operator but I listen in a lot on the local 2 meter repeater.

I have heard that amateurs use the 50 Mhz band for mobiles but when I put my scanner in search mode I never hear anything. Is it true, or not, that they are on the 50 Mhz band?

KNWD TS450SAT IN REAL GOOD SHAPE FOR 600.00 + SHIPPING
KNWD TR9130 2 METER ALL MODE IN GOOD SHAPE 300.00 + SHIPPING
I really don't want to let these go but have to get some dental work
done.

I usually find it by looking on my roof :-)
Actually, I've been using a Hustler 6-band Trap Vertical (the 6BTV.. 27 ft tall) for over 11 years now... no guying, mounted on a chimney.. it's survived 60-70mph gusts, heavy icing, and the usuall nasties. It's still in use, has only required dropping twice (once to move, once to clean and re-anti-oxidize the joints) and was the least expensive of the commercially built verticals (about $150 now.. $123 then). I've worked plenty of DX on 10-40m... 80m operation is quite narrow bandwidth-wise... mine's mounted on the roof, with cut radials for each band laid on the shingles.

It will take only a few minutes to check for yourself. Just throw some wire over your roof or up to a tree and connect the bottom end to the receiver. For a ground connect to a cold water pipe.

why not do some work and check them out for yourself. The Icom owners
will recommend Icom, the Yaesu owners, Yaesu. They've bought the
radio that's right for them, or at least will steadfastly defend their
decision to plunk down a grand (even if they end up NOT liking it,
grin!). You end up with the Coke and Pepsi debate ... or the
code/no-code ... just subjective opinions ... and they're like
assholes, everybody has one ... grin!

There are reviews on www.eham.net on both rigs. Both are fine little
radios.

The MarkII"G" is comparable to the FT100D, so make sure you're
comparing apples to apples.

Hello all!!!

With the majority of United States amateur radio operators being of the age 35 and up, and a large percentage of that majority being over 50 or 60 years old, we as "hams" need to work on promoting our hobby.

I am looking for tips, suggestions or ideas in regards to promoting amateur radio to youth. I have a program I am working on over the next nine months to promote to the area elementary, middle and high schools and colleges, and I want to make sure that I cover all bases.

Any and all help that you might have to offer would be greatly appreciated. Please email me at kc8pmx@tm.net with your suggestions.

Thanks!

Hi Ryan
One thing I might suggest is too work with the scouts/cubs and the cadet groups in your town. My first experience with Ham Radio was with the Cub Scouts and I never forgot it. Our ham club sets up a field day type site at the Scout jamborees and let the little ones work stations all over North America. We have to send the kids away so that everyone could get a turn. We always get asked back and it is a good fun week end of camping. Many cadet groups can get funding from the government to set up a station at the hall to give practical training under supervision. I hope that I may have helped in some way.

That's quite a choice for your first rig... most hams start with a simple 2m
HT. From what I have read, the 706 seems to be a better radio over all. You can
go to http://eham.net and read reviews of both radios as well as lots of ham
radio equipment.

Hello Everyone,

I am looking for the following CQ VHF Magazine's:

1996: August
1997: February, September, October, November
1998: March, June, July, October, November, December
1999: January, February, March, July, August, September, October, November

If you have any of the above issues in good to excellent shape, and are willing to part with them, please send me a personal email.

Thanks!

73,
Brian, N5ZGT

well I'm 30 and my 8 year old is facinated by the code....(she may be the only one to EVER use CW when I can finally get a rig). But at 1-3 grade they are learning the alfabet and how to spell, if they learn the code then it is much better and easier for them.

besides what kid dosen't want a note to be readable be the teacher :)

===================================

Strictly speaking, both Tony and Ian are right.

An ATU in conjunction with an HF receiver is designed to maximise wanted signal strength into the receiver. Simultaneously it also performs the highly undesirable function of minimising receiving selectivity. The common or garden transmitting ATU cannot be adjusted to function as a good preselector. It doesn't have the right component values.

But the difference between a preselector and an ATU, say, a T or Pi-network, lies mainly in the L-to-C ratios. A preselector is adjusted for a much greater receiving selectivity by deliberately creating an impedance mismatch. The lower damping on the tuned circuit then allows the tuned circuit to do its job.

Forgetting all about impedance matching, a much better preselector performance with a 50-ohm receiver is obtained with a coil tuned to the wanted frequency by a parallel variable capacitor with the receiver tapped into the coil at about 1/30th or 1/20th of the turns up from the grounded end, the aerial being tapped higher up the coil as the length for the shorter aerial wires. All receivers without a tuned RF stage (that's most of them these days) would benefit.

A 1000-ohm receiver can be tapped higher up the coil, at about 1/8th or 1/6th of the turns for starters. Keep in mind the idea that the receiver input impedance should not be connected across such a large fraction of the coil turns that it damps down the natural selectivity of the tuned circuit.

Get a cardboard toilet-roll tube, some 18, 20, or 22 gauge enamelled copper wire, some crocodile clips, and make one. Instead of a variable aerial coil tap another variable capacitor can be used in series with the aerial to have a similar effect.

Provided the strength of the wanted signal is not reduced to within 10 or 20dB of internal receiver noise it will seldom be of any consequence. It may be occasionally beneficial in preventing receiver overload by adjacent very strong unwanted signals.

You can always find one or two really interested kids to dig into ham ,
perhaps a couple to look over what is going on and give it a limp try but
the masses are to involved with other things to be sucked in.
Now if you could combine.. say skateboarding with HAM you might get
someplace..

Has anyone had a problem like this?

I have a '97 Ford Escort wagon which apparently is creating static when it is moving. This isn't ignition noise, but rather a crackly, rapid, erratic popping audible on the AM radio as well as on a HF ham radio. The odd thing is that when I step on the brakes, the noise goes away. The harder I press on the brakes, the more it diminishes. I can easily modulate the strength of the noise by the amount of pressure on the brakes. In wet weather, the noise is completely absent.

I'm suspecting static generation on the brake pads and/or drums.

Any suggestions? Change to metallic pads? All comments welcome.

73, Bill W7TI

Yes, you can do it in a month, and I would recommend the Gordon West books.
They read well and you can learn some radio theory aside from simply
remembering the answers.

Hello All:

I am interested to know if anyone is using RadioCom Software by Bonito (www.bonito.net). It looks like a pretty powerful program for those who use a computer with their rigs. The software decodes all digital modes, weather faxes, tracks satellites etc....

thanks

steve hammer

yep. You don't see them much anymore, but you can find them
in some of the larger auto parts stores. It's a (static electricity)
conducting, rubber-based strap that you bolt onto the shackle hangers
of the vehicle. You'll see them on commercial trucks that haul
scary chemicals. It hangs down and lightly drags across the pavement.
Since the truck-style ones are about all you can find, on a car
they REALLY hang down and drag -- unless you trim them.
It's purely a static *drain* , _not_ a low ohmage conducting path.

Is there a minimum age for the license?
My boy is only 6, but he is way interested already.
I know it will be a couple of years before he gets the hang of it but when
can they takje their test?
i heard it was 14?

I use a tripod mount on the ground with 40 feet of antenna mast in it.
Feeding the bottom of the mast with a ICOM AH4 antenna tuner and a ground
rod right there it works fine on ALL bands. I also ran ground radials as
best I could in all directions....works very well and tunes up nicely. angle
of radiation is pretty high, nice for long distance..but wont set any
records for close-in work......Eddie

There is no minimum age in the US for a ham license.  All he needs is
the ability to pass the test.

I have lost the owner's manual to my TH-28A and can't remember how to program
the Alpha Memory ID's for the memory channels. All else works OK.

Kenwood no longer lists this manual on its site. Can anyone tell me the
sequence of steps for restoring this data?

Thanks

I have EC 888 echo chamber, which has started to make intermitent bubbling
noises on other peoples recievers.

Also the echo chamber when plugged in is making my cb radio recieve through my
speaker while I transmit.

I realise this is an amateur radio site, and this is a cb related question but
I thought somebody maybe able to help :-)

Richard.

Likely the bubbling that you hear is your brain in the first stages of self destruction. A common problem when you are a good buddy!

Connect the input of the echo chamber to the coaxial connector for the antenna coming from the back of the transceiver. Hook the output of the echo chamber to the microphone input.

Hook the microphone to the power supply.

Apply power, put in transmit, and yell in the microphone for 3 minutes. Go to receive and listen for the echo to return.

If this doesn't fix it, put the units in the driveway and run over them with your automobile 3 times then try again. This time, hook the microphone to the AC line and make sure you have sitting on a metal chair grounded to a good earth ground when you hit the push-to-talk.

Your problems should then all be over.

Not sure what you mean buy "Alpha" memory, but from the manual, to set a
regular memory channel:

1. Select the frequency, etc., like you want it.
2. Press the M key (The memory indicator will flash).
3. Select the memory location via the keypad (00 - 39).
4. Press the MR key.
5. The memory channel number will turn off indicating that location is now set.

HTH,

Barry - N4BUQ
>I have lost the owner's manual to my TH-28A and can't remember how to program
>the Alpha Memory ID's for the memory channels. All else works OK.

I think I see what you're talkin about "Alpha" memory.

From the manual:

1. Press and hold the MR key and turn the power on.
2. Press the MR key to enter the memory channel mode.
3. Select a desired channel from among the memory channels in which you stored data using the Tuning control or numeric keypad.
4. Press the M key, then press the MHz key to enter the message setting mode.
5. Enter your message with the keypad. See the list on page 43 for the key combinations for each letter.
6. If you enter the wrong message, press the VFO key to start over step 5.
7. Press the MR key at the end.
8. You can display a message from other memory channel(sic) by performing steps

2 to 6 again.

If a message is specified for a memory channel, the message is displayed instead of the frequency. If you want to check the frequency, press the F key, then the 5 key.
---end of manual text.

The list of key combinations on page 43 is rather extensive, but you may need them in order to make sense of what you're setting. If you need them, I'll try to copy those to you as well.

73,

Barry - N4BUQ

Hi all,
Two questions:
Are there any upgrade mods for the FRG7000, and..
Does anyone have a schematic for the Buffer Amp/ Counter/Display Module in the FRG-7000? These are not included in the copy of the instruction manual I have.
Any comments appreciated. Thanks.
regards,

A ham friend of mine (old Tech+Code) and I (Tech, taking General test in a couple of weeks) want to communicate simplex on a state or regional basis. He drives a truck for a living, and we'd like to get in touch while he's on the road (yes, while mobile.)

I live in NW Oregon, and he drives from here to Salt Lake City and back. We've been rattling ideas back and forth, and one that we thought had promise is 6m SSB. We don't expect to make contact on the same band for the entire trip; while in SLC we'll try 10m, but in closer we seem to be in the skip zone (of course, it could be other problems but that's our assumption.) 40m NVIS would definitely do the trick, but it's a little hard to implement in a semi truck that can't have permanent equipment <sigh>.

Keeping in mind that the terrain on his trip is fairly mountainous, is 6m SSB a good choice? What kind of simplex range are those of you in hilly terrain able to achieve? Any other ideas?

Thanks!

Lake County Amateur Radio Club's Annual Dads' Day Hamfest and Computer
Show The Lake County Amateur Radio Club will hold their Annual Hamfest
and Computer Show on Sunday, June 17, 2001 (Fathers' Day) at the Lake
County Fairgrounds Industrial Arts Building, Crown Point, Indiana.
The doors will open promptly at 8:00 a.m.
The indoor show features commercial vendors of ham radio equipment,
computer hardware and software, and an electronic and computer parts
and equipment flea market. Food and beverages as well as walk-in VE
testing (for amateur radio licenses or upgrades) will be available.
Tickets are $5.00 and available at the door. Table rental is $6.00

NOW AVAILABLE.

Updated version of PROGRAM "ZL-ZIN.exe"

Coaxial and Balanced-pair Transmission Line Calculations.

This program computes the value of the load or terminating impedance which must exist at the end of a transmission line of given Zo and attenuation for a measured line input impedance. It is tailored specially to calculate the feedpoint impedance of an inaccessible radio antenna from input impedance measurements at the readily-available transmitter end of the feedline.

Another application is the precise design of transmission line impedance matching transformers.

It can also be used to correct errors perhaps due to unavoidably long test leads when measuring radio components at HF.

As the transmission line becomes longer it is necessary to know its characteristics more accurately. Simple means of estimating line characteristics are described in the notes.

This is an updated version of a program of the same name issued in 1999. There are some minor changes in the accompanying operating notes and a facility to sweep measured input reactance in small increments from the keyboard has been added. Mathematical operations and computed results remain unchanged.

It is suggested you download this new version and if you already have the earlier issue overwrite it with this one dated 15th April 2001.

Download ZL_ZIN in a few seconds. Only 52 Kbytes. Not zipped up.
Run immediately.

6 meters is a line of site band unless its open to Sporatic E or f2 layer...in any case it would be difficult to depend on any ionospheric propagation to hope for a contact with your mobile friend in transit between Oregon and Utah. The incident of Sporatic E peaks in June and you could listen to the band during this period to learn more about that kind of propagation. There tropospheric propagation, but again not dependable.
High power stations with Yagi antennas have some communications success with forward scatter work.

Six is an interesting band and maybe there are repeaters nodes accessable to low power mobile work.

A lower frequency band would be more reliable.

73,

The South Dorset Radio Society are running the station GX3SDS/P for
International Marconi Day on the 21st of April.

The station will be run from the Nothe Fort in Weymouth. GX3SDS/P will be
operational from 10:30AM until 18:30PM on the day. The station will be QRV
on HF and VHF bands throughout the day.

An APRS station will be active with information on the station.

Club website - http://www.g3sds.org.uk

73 and hope to catch you on the bands.

Richard, 2E0AVF

Andrew,
Look at www.mods.dk. This is the best mods site on the net. There are picures
of a mod but not very detailed there, however the mod is detailed step by step
to expand the tx from 134-174 or something like that.

It depends on antenna height or length.

Vertical antennas with heights (lengths) less than 5/8 wavelengths
have very nice low angle radiating patterns. There's one very broad
lobe with the maximum along the horizontal.

Heights above 3/4 wavelength have multiple lobes most of which are
between angles from about 25 degrees up to the vertical..

I'm 20, and have been a ham since I was 16.. in fact, HA, 4 years 2 days ago (4-18)... I just realized that :)

All the suggestions are great... Jamborees, etc for Scouts.. working the local elementary-high schools, etc. Setting up chats with people in orbit (e.g. former MIR) or an appointment with a couple of people in foreign countries, other states, and the like will always get a crowd in a school parking lot or field. And, ultimately the ones who study and go for the tests are the ones who are more likely to stick with it than those who dont (I love licensing)... Maybe line something up like that (some exposure in schools) a week before Field Day or some other big contest and invite them out, hand out flyers, and tell them "You liked this? <Insert Event Here> is gonna be bigger & badder"...

A presentation to any HS applied physics classes, or electronics (AC/DC, Physics of Technology type classes) might also help. Having those presentations the day of, or day before your parking lot presentation of chatting it up with far away folks, which is of course 1 week before Field Day would be cool. :-)   Show them or tell them about the different modes in the parking lot - ATV, repeaters, internet gateways (if you have one locally, all the better), satellite, etc... Newer digital modes too. Of course, students dont often have a lot of spending money (unless mom & dad spoil them ;-)), so especially in the classes, but the parking lot too, show the kit radios in an Altoid box, easier antenna projects, or something creative and cheap. Demonstrate that ham radio kicks CB tail 10 meters from Tuesday (hehe).

Now that you have set up a parking lot (or someplace on campus, thats just an example), a classroom visit for electronics classes, an event a week later you could also have planned the beginning of a no-code theory class or 2 on different days of the week (to catch as many students & adults as possible) open to the public. Be sure that you get in the good with teachers/faculty too - licensed faculty can only help! After other PR measures aimed at adults, the 2 classes may do very well. Code classes could come some time after that.

After you've got a good group licensed, one thing I ***KNOW*** from experience is to foster involvement with students more than you would adults (well, some adults fall away just as easy). A campus or district club for students/faculty would be snazzy. Any hams you already have in the schools can be instrumental in this. Your local club probably already has antenna classes, get togathers for making kits, but whatever students you have or get - pester them the most to get involved in these things!

I don't know what you are already doing, but I'm just spewing forth with ideas and such that might give you some ideas to be creative with... I just like to ramble! Who knows, you might be doing all of the above already, in which case, just ignore me :)

73!

The 2950 is a 10 meter radio, not a CB. Then again, if you were a ham, you'd
probably know that.

Ok it is a 10 meter radio::wink:: wink:: what do you need 10 meters for?
Are you freebanding again. I will bet you more 2950's are in use on the
cb/freebands than the amatuer band.

>What is the easiest way of finding the correct input frequency with the
>necessary tones needed to talk on the repeater.

It depends on what band the repeater is on. If it's a 2 meter repeater, then the input frequency is -600hz if the frequency is below 147.000 and +600 if it is above 600hz. Your best bet is to check in a repeater directory or do a search on the internet for "online repeater directory".

April issue of QST magazine has two articles about the QSL bureau, one about the outgoing, one about the incoming. Everything you need to know is there. You do not have to be an ARRL member to use the bureau.

As for swapping QSLs, I would have completed my WAS years ago if I could get my fellow hams to return cards that I send out, but many many of them just dont send back cards. Very frustrating, so be prepared for disappointment when expecting a card back.

I'm curious what the general opinion is on the two following beginner books available at radio shack.

Basically my story: I think there is a test in the beginning of may around here, and I've always thought that I should take advantage of the opportunity and take it. So I have about a month to study. Is it realistic for me to learn this stuff in a month?

The following are two I saw in my local store... there may be more available in different stores.. Technician Class looks like a quick-study guide.. but I don't know.

The two books I'm looking at:
Technician Class: Become a Licensed Ham Without Knowing Morse Code!
By Gordon West
http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=CTLG%5F011%5F010%5F000%5F000&product%5Fid=62%2D2440

Now You're Talking! All You Need For Your First Amateur Radio License.
Published by ARRL (I dont know if there is a central author or editor)
http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=CTLG%5F011%5F010%5F000%5F000&product%5Fid=62%2D2428

Opinions? Suggestions? (I have credit at Radio Shack so thats why I'm looking to buy there.)

Thanks

If you live in (or travel to) the Southeastern United States, the S.E.R.A. Journal is the best source of information.

Nationally, the ARRL repeater directory is good--if you're over age 50. Otherwise, the print may be too small.

Why do you make assinine assumptions? I can be an idiot like you and say you
don't have a license either but I know it would be foolish on my part to
assume without actually knowing the truth.
The truth of the matter is you probably are looking for a cb antenna for use
with your 2950. Why else are you going to use this antenna Why are you so
upset they couldn't give you the info about the antenna. Perhaps you could
find an elmer with a general or higher class and you can sit in on our qso
on 14.313. If you like invite a few OO's to sit in, the ball is in your
court. Or better yet i guess i could always catch you on 27.025, Ill listen
for your roger beep

It's easy to learn that stuff in a few weeks, if you know how to
study.

If you're just looking to pass the tests without learning much about
the subject matter, you don't even need the books. There are several
online sites that you can take practice tests at. Take these enough,
and eventually you start remembering the answers to the questions.

If you'd like to actually learn something while you're studying,
please, by all means buy one of the books. I've only read the ARRL
book, but it seems to provide a good introduction to ham radio while
helping you study for the exam at the same time.

I am contemplating the purchase of a 2002 Ford Explorer (XLT - 4 door with 3 row seating). I would appreciate hearing from anyone who has already put a drill to their's! From what I have been able to see so far, it will probably be a bit more challenging to get the Kenwood VM7 into this vehicle than it was the '98 model. My proposed antenna is a roof mounted Larsen NMO-270.

For starters this would be an excellent way to spread a virus to wipe a hard drive clean! So why trust you? anyone doing illegal activity or at least dumb enough to store it on the Hard Drive instead of an encrypted CD deserves to get caught! but the best thing to do is pop the cover and slam the HD with a hammer! thats that. I don't even keep the screws in the back holding the mid-towers case since I am always upgrading CD-ROM's, Video Cards etc., as they get faster and cheaper! so take this wasteful spam crap somewhere else, didn't you know pyro's are the most intelligent people on the face of the earth?

PD

p.s. a self exploding device could easily be made by using whatever for the trigger and Boom, no more HD! just as fast as the police can say, "Police we have a Warrant!"...If the information was of something of very classified importance like what computer hackers get from our own defense department. other than that who really cares what porno sites can be traced, my wife busted me many years ago before I learned how to clear the Documents folder which shows last pictures or Doc's looked at! funny now but not then!

>Why do you make assinine assumptions? I can be an idiot like you and say you
>don't have a license either but I know it would be foolish on my part to
>assume without actually knowing the truth.

I think I've proven that I have a license. I don't think I'd go through the trouble of creating a website like I did just to steal someone else's callsign. You have yet to prove that you are a ham. Since I have never met a ham that wouldn't give his call, I can only assume you are not a ham.

>The truth of the matter is you probably are looking for a cb
>antenna for use
>with your 2950. Why else are you going to use this antenna Why are you so
>upset they couldn't give you the info about the antenna. Perhaps you could

Again, a 2950 is a 10 meter rig and an 11 meter dipole would not be the best antenna to use with it if I decided to keep it for when I upgrade (I am planning on selling it with some other equipment to buy an Icom 706). I got rid of the 10m to 6m transverter because 10m rigs only cover 28.000 to 28.699, which only gave me 50.000 to 51.699 on 6m. I have since bought a 2m to 6m transverter, which I use with my 2m all mode radio, giving me the complete 6 meter band. I would like a dipole to use with a sideband CB that I plan to get sometime in the near future. I don't feel like putting my own together again because it's a pain to trim the antenna, trying to get the right SWR for channels 35-40.

>find an elmer with a general or higher class and you can sit in on our qso
>on 14.313. If you like invite a few OO's to sit in, the ball is in your
>court. Or better yet i guess i could always catch you on 27.025, Ill listen
>for your roger beep

Since you're not a ham, I wouldn't hear you on 14.313, unless you're transmitting illegally.

Hi all

I am looking at buying a Yeasu FT-100 and the matching FL-100 antenna. I have asked at one of the toy stores and they told me that they have been having trouble with them so they don't stock them. I was wondering if anyone else has had trouble with this combo and what the trouble was before I spend the $$$$

I'm about to do the same ... the FT100D (the "D"eluxe) version that is the current production model has a larger speaker, 500Hz CW filter, TXCO and a few other improvements over the original FT-100.

I presume you're referring to the ATAS antenna. They're not without a few glitches, the most common being a tendency to overrun the threads on full extension (but that doesn't happen in automatic mode). All said, they work great, and continue to do so for most folks.

See the user reviews on www.eham.net, but don't base your decision entirely on them. Hams who experience problems tend to exagerate on the negative side, and hams who feel a need to defend their decision to plumk down a wad of cash go the other way ... grin!

Having run HF mobile for 7 years, (FT900/AT with a variety of antennas) I can say that many of the "wierd" problems that occur are often due to faulty antenna grounding, inadequate power supply, misuse (like trying to get that little mobile antenna to take 300 watts on 160 meters) or UCI (user cranial implosion). It's part of mobile HF operating, pure and simple, and an HF mobile operator is often trouble shooting. Rarely though, is the problem on all bands. Every car and installation is different.

FYI ... AES in the States has the radio and antenna for $1289.88 USD
.. that's a nice price!

that

```
> wouldn't give his call, I can only assume you are not a ham.
======================================================
This is the internet why do you need to know my callsign. What difference in
your life will it make to know my call. As of now it is BadaBing thats what
i use on the NG's. On the radio of course it is something else, but last
time I looked we are not on the band

>
> >The truth of the matter is you probably are looking for a cb

====================================================
Again there are more 2950's modified for 11 meter use than being used on 10,
Obviously a 11 meter dipole would work well on which band?  11 meters did
you say the CB band, The 2950 is an 10/11meter rig .. Hello, wake up here.

> Since you're not a ham, I wouldn't hear you on 14.313, unless you're
> transmitting illegally.
======================================================
Try me, I am standing by with my mic in hand.  oh thats right you can't talk
HF  you did'nt memorize the questions/answers yet

Hello Everyone,

I'm having a problem with my Kenwood TS-940S, in that I can receive signals, but they are rather weak sounding and my s-meter does not deflect to show their signal strengths. Sometimes, however, the signals sound great and the s-meter does work properly. And other times it takes a station with a 20db-over signal to move the s-meter (but even then the meter doesn't show them as being 20-over nine).

I've used another radio to compare stations to figure this out. My RF gain is set correctly (fully clockwise) and I have any other filters turned off. And I have checked all of my coaxial connections, and they are good. The antenna being used is a beam up 40 feet.   Yet I'm still unable to figure this out.

I'm wondering if anybody might be able to offer some clues as to what can be causing this, and what I could possibly do short of sending it to Kenwood for repair (if they still work on a rig this old). Has anyone else had this problem with their TS-940?

Thanks and 73,
Brian, N5ZGT

Outdated advice.   There's no fuel pump noise in a 2000 Ford Windstar, and
very little ignition noise since it's a distributor-less system.

>What do you call proof a web page ?

>

Ok, I admit it. I stole someone else's callsign, created a webpage professing
that I am that person, added my information to this person's information on QRZ
and QSL.NET. You caught me.

>This is the internet why do you need to know my callsign.

Translated: "I don't have a callsign"

>Again there are more 2950's modified for 11 meter use than being used on 10,
>Obviously a 11 meter dipole would work well on which band? 11 meters did
>you say the CB band, The 2950 is an 10/11meter rig .. Hello, wake up here.

The 2950 is a 10 meter rig, not an 11 meter rig. An "11 meter" or CB dipole
would not perform well on 10 meters.

>Try me, I am standing by with my mic in hand. oh thats right you can't talk
>HF you did'nt memorize the questions/answers yet

Neither can you.

They don't, which is why I never used the feature when it was hooked up to my

10m to 6m transverter. The 2950 is a very good rig for 10 meters (or 6 meters
with the transverter), if you can find it being sold for what it's truely
worth. I was lucky enough to find it for sale for $100.

Should I put my 6m 5-element log periodic beam antenna back
together again and up on the pole on my deck, or wait?
How has the band been doing these couple of weeks of solar
storms? I'm curious, but haven't been able to tell if
its worth the effort from my QTH near San Francisco.
Anyone have any recommendations/expectations?

Some of my Yaesu's have done the same thing - sounds like signals are somewhat 'muted', at about 1/3 their normal strength although the controls on the rig are set okay...and it's an intermittent problem...doesn't happen all the time...

Sometimes my turning the rig off/on will correct the problem and bring the signals back to normal listening level, sometimes just pushing the enter key (like to enter a frequency manually) will reset whatever has gone wrong and return the rig to normal.

I realize you've got a Kenwood and I'm talking Yaesu, just wanted to let you know that I've had two rigs with your same problem - a 1G serial number FT-990 and a 0E serial FT-1000MP. When I've called Yaesu tech support they've denied any knowledge of the 'quirk' and go into their Sgt. Schultz routine - "I know nothinnnnggggg" - effectively leaving me to solve the problem. So much for Yaesu tech support.

Give the Kenwood techs a call - maybe they can help. How about passing along the answer back to the group?

John

Brian Mileshosky <n5zgt@swcp.com> wrote in message
news:3ad0c508.96732087@news.swcp.com...
> Hello Everyone,
>
> I'm having a problem with my Kenwood TS-940S, in that I can receive signals, but they are rather weak sounding and my s-meter does not deflect to show their signal strengths. Sometimes, however, the signals sound great and the s-meter does work properly. And other times it takes a station with a 20db-over signal to move the s-meter (but even then the meter doesn't show them as being 20-over nine).
>
> I've used another radio to compare stations to figure this out. My RF gain is set correctly (fully clockwise) and I have any other filters turned off. And I have checked all of my coaxial connections, and they are good. The antenna being used is a beam up 40 feet.   Yet I'm still unable to figure this out.
>
> I'm wondering if anybody might be able to offer some clues as to what can be causing this, and what I could possibly do short of sending it to Kenwood for repair (if they still work on a rig this old). Has anyone else had this problem with their TS-940?

Gary, what do you expect.He knows what it is used for that's why he is
buying the CB dipole.

```

You act like just because you give a web page with some information that
means I am supposed to take that as the gossipel of the land. Do I need a
web page to prove I am a Ham? Oh thats right I already have one QRZ.com,
buckmaster etc.

>
> >This is the internet why do you need to know my callsign.

===
Ok whatever you say. I will ask you nicely. I am willing to go out on a limb
and talk to you on HF. Thats right you cannot. So with that being said I
will make it a monetary wager. You pick the ham of your choice and I will
talk to him. If I am wrong, and don't have the license I say I will pay you
$1,000, If I do prove I am licensed you Pay me $100.00. Payable thru PayPal
over the internet. What do you have to Lose. It is either a Yes or No
question.

>

> The 2950 is a 10 meter rig, not an 11 meter rig. An "11 meter" or CB
dipole
> would not perform well on 10 meters.
==
Oh so you are saying a ranger 2950 is a ham rig 10 meter only. I guess you
don't know about changing the 2 jumpers on the display board which opens it
up from 26- 30/32 mhz. As knowledgable about radios as you are. Ooops let me
reprhase that, I would figure you know how to modify the radio after doing a
search of a 2950 on the web. So you still want to say it is a 10 meter
radio :wink:wink:. Again tell me why a 11 meter dipole won't work on 10
meters?

>
> >Try me, I am standing by with my mic in hand. oh thats right you can't
talk
> >HF you did'nt memorize the questions/answers yet

Hey, you caught me. I went through elaborate measures to create a false identity. Columbo would be proud.

I won't think any less of you. Just admit it. You don't have a license. Besides, I have a feeling that I'd be able to talk to you on VHF because with your attitude, I'd suspect you are some where in the Metro NY City area, as I am. I could be wrong, but your attitude is consistant with my fellow NY/NJ residents.

>Oh so you are saying a ranger 2950 is a ham rig 10 meter only. I guess you

Since I have no desire to modify ham radios, I would not search for a modification to the radio, especially since it was used to drive a 10m to 6m transverter.

Just admit it. I've got you beat. There is nothing that you can say. You are looking bad in front of my fellow hams. Just put your tail between your legs and wimper back over to rec.radio.cb.

Trade in value is not the same as selling price or value. If you sold it yourself to another ham, it could go from $425-525 I'd guess. To trade it in to a retailer for a new radio, he would have to polish it up, let it sit on his shelf for awhile, and then make some profit on it, so you might see $250 in trade? Just guessing here--it would depend alot on the margin in the radio he was selling you. Certainly it would be better for you financially to sell it yourself, and the dealer might not want to mess with it anyway.

1. I didn't say a 2950 can not be used on 11 meters. If you say that it can be modified, fine, so be it.
2. I didn't say an 11 meter dipole couldn't be used on 10 meters. I said it wouldn't be the best antenna for 10 meters.
3. As far as your "challenge" goes, all you've said is "Pay me for me to prove I'm a ham". I give this information for free. Like I said, I have never met a ham that wouldn't give his call.
4. You have failed to prove that you are a ham, so I have to assume you are not.

73 OM. See you in the funnies.

You were right that is the antenna I was looking at. I don't know where I
came up with FL-100. I just checked the price again today, ($2500.00
Canadian for the radio). That's a full two weeks take home pay for me so I
may have to put one away on lay-a-way in order to eat. thanks

```

I am the list manager for 2 ham radio email reflectors and I'd like to invite all hams to join. They are as follows:

2 meter all mode - this list is for the discussion of all aspects of 2 meters - FM, SSB, CW, RTTY, QRP, etc... regardless of your geographical location. Everyone from the new Tech with his HT to the seasoned ham working EME is invited.

6 meter all mode - the same as 2 meter all mode, but for 6 meters! :)

For more information, visit: http://egroups.com/group/2mallmode or http://egroups.com/group/6mallmode or to subscribe: Send a BLANK email to 2mallmode-subscribe@egroups.com or 6mallmode-subscribe@egroups.com

Hope to see you on the lists!

I still agree with "fox". I still hear about a LOT of people having trouble with Ford vehicles' ignition/FP noise. Same as it was 35 years ago. GM has been my favorite for this very reason. I recently installed an IC706 MKIIG in a '93 Lumina Z34. The car is so quiet, I didn't even have to do ANYTHING other than the usual grounding--no hours spent chasing noise. Nada! Nich! Nein! Every Ford vehicle I ever had either made so much noise, or gave so much mechanical trouble, that I abandoned Ford many years ago NEVER to return. I'll be damned if I'll spend time stand ing on the side of the road on a routine basis waiting for a wrecker any more! I'm stickin' with Chevrolet! LOL! Just MHO!

What do you all think of vertical antennas in HF? Anyone using such a system? how do you find it?

Any response would be great :)

Just thought I'd mention to everyone that I host two ham radio email reflectors and I encourage all that are interested to join.

The first one is 2 meter all mode. This email reflector is dedicated to 2 meter radio and all aspects of it, be it FM, SSB, CW, RTTY, Simplex, repeater, etc... There are no geographical boundries! The second is 6 meter all mode, the same as 2 meter all mode, but dedicated to 6 meters. For more info:

http://egroups.com/group/2mallmode
http://egroups.com/group/6mallmode

Or send a BLANK email to: 2mallmode-subscribe@egroups.com or
6mallmode-subscribe@egroups.com.

I am not familiar with the radio you mention, but I suspect the output is "low level" (similar to what an RCA type jack would carry). This low level audio more than likely needs to be amplified externally, similar to high end car audio. Try borrowing an amplifier to prove this theory.

Hope that helps,

Silent boB

Another true story: We have our annual hamfest here in Milton, FL every July.
Out front we have a large sign that reads "HAMFEST". Without fail, every year,
we have at least one couple or one family that drops by thinking we are serving
all types of ham inside. They always turn beet red and walk out when we explain
HAM RADIO to them.

Maybe your comprehension skills are eroding I have held a ham license since oh, probably about the time you were legally allowed to drive. See the problem is you are trying to memorize the answers when you should actually be learning what the question means. That also explains why you don't understand the rules because you are memorizing the answers and not learning the content. That is why the hams of today are looked down on by some of the older hams who did take the test in front of a FCC examiner, and had to know formulas and equations instead of remembering the correct answer you had to figure the answer out. Like I said study the answers and one day you will be more than a VHF Drag Queen.

>Maybe your  comprehension skills are eroding  I have held a ham license
>since oh, probably about the time you were legally allowed to drive.

It's ok. We understand that you really don't have a license. After all, if you
did have a license, you'd be willing to prove it, which you apparently are not.

That also explains why you don't
>understand the rules because you are memorizing the answers and not learning
>the content. That is why the hams of today are looked down on by some of the
>older hams who did take the test
>in front of a FCC examiner, and had to know

>figure the answer out. Like I said
>study the answers and one day you will be
>more than a VHF Drag Queen.

It's not my fault the FCC made it so it's easy to get a ham license. Perhaps
you should have to built a QRP rig from a candy bar wrapper and a diode to get
your license, but until they change it, I've met the requirements just like
every ham has been required to do since licensing was begun. Sure, the exact
requirements have changed, but I've done what I've had to do. Do you really
think I care if other hams look down on me as you claim? I still have the
privlages and I will continue to use them. Like I said, if you try hard enough,
even YOU could probably pass the test, then we could sit in our dresses and
high heels like the Drag Queens we are and shoot some DX.

any opinions on radio shack handheld 2 meter rigs? I am newly licensed ham who was wondering about their quality , as they have one on sale at present time, marked down to $129.00 from $169.00.

Thanks in advance for your input.

It sounds like you're talking about the HTX-200 and not the HTX-202. That's a shame, the HTX-202 is a sturdy and capable radio - albeit a little large and cumbersome by today's tandards.

I happen to have an HTX-400, the 70cm version of the HTX-200. The only significant difference is the HTX-400's 9 volt output of 1 watt instead of 2 watts for the HTX-200. Guess I could say that I'm fairly satisfied with my HTX-400 - but I DID buy it on sale for $69.99 and would NOT have paid full price for a radio that only puts out 200 mW on internal batteries. The features and ease of operation for the radio are right up there with the rest of the field, and receiver audio is quite good, considering the size of the rig.

My problems are the lack of DTMF capabilities and low power output. The HTX-200/400 series may work very well for short range simplex operation, but I find that unless the repeater is very close, that they just don't have the punch to get the job done. The power issue may very well go away for me fairly soon. Radio Shack has a 9.6 volt RC battery (and charger) which is fairly light and still provides a full 1000 mAh of juice. I'm thinking of a method to insert a couple of diodes to drop this voltage closer to 9.0 volts and making a clip-on-the-belt case and cord for the battery so that it'll hang on the belt and power the radio. That should give me 1 watt of power while I'm walking around with the radio... Maybe then I'll be better able to hit those repeaters.

In the meantime I'll mourn the loss of my Icom IC-i2A (a small, yet relatively strong 2-meter rig), which was left on the rear bumper of my car and subsequently lost on the way from Point A to Point B - and continue using my HTX-202 and HTX-404 for "serious" work....

Agreed. The -202 was a tough HT....probably useable as a hammer in case of emergencies! I prefer my Yaesu FT-470, but for the price....the RatShak rig wasn't too bad.

The HTX200/400 are a different item completely. I have two of the -400's, pretty good range into a repeater with a hot front end and good coverage (I've chatted over 100 mi. to a 440 repeater while sitting up on a ridgeline...but it helps to have the antenna at 3500 ft. <<grin>>). Good audio, not bad if you're close to the repeater. I normally can get 10-20 mi. no problem clear terrain. Worth the $70 or so RatShak charges for them. Great hamfest radios!

Back to topic. Do NOT buy one to use as your main radio. Get one of the
better dualbanders (love my Yaesu!) from Icom, Kenwood, Yaesu, or Alinco. Try
for 5 watts output. Or, check around for an inexpensive mobile with PL.

Good luck!
Andrew

No kidding! I dropped my -202 off the handlebars of my bicycle while doing about 40 MPH down a steep hill. Saw it hit the sidewalk and start tumbling and my heart literally went up into my throat. Turned around to pick it up and called the guy I had been talking to before I hung the radio up to negotiate the hill....asked him how I sounded and he said I sounded better than before and wanted to know what I had done. I thought about trying it again to see if I got any more improvement, but decided to quit while I was ahead LOL

If you find a good one used, jump on it. It is a good solid radio with lots of features for an entry-level HT. Even if you later upgrade, it will make a very solid and serviceable backup, loaner, or kid's/XYL's rig.

Hello all!
I love to DX and do limited contesting. I have been searching for awhile (and
doing some posting out here) in search for the right antenna. Because of my
living situation (an apartment) the antenna has to be a vertical, not over 20
feet tall, and no radials or counterpoises sticking out all over the place,
wires laid out on the roof for radials are OK tho. I would like to work the
bands 10 -20m including the WARC bands. Any suggestions for an antenna that
would fit this need??
Please email me direct at: NZ8C@aol.com
73,
Renee

Hi Ryan
I live in Belleville and travel to Burlington / Oakville
many times during the year.

The VE3AYR Ontario repeater directory www3.sympatico.ca/januscs lists 47
repeaters in Toronto.
If you include the surrounding areas ie. Burlington to Cobourg, and north to
Aurora, there are probably
well over 100. A lot of repeaters have a weekly net on them so there is
always someone to chat to

Good luck with the licence
Peter

I had a 261 and had the same problem only to find out the manual
procedure for usingthe alphanumeric display was incorrect.

You might want to contact kenwood or down a copy of the updated
manual(if they ever updated it).
Kenwood has downloadable manuals for all their rig from their home page.
I attached a link to
take you directly to the 261 page.

TUBES AVAILABLE

I currently have over 300,000 tubes in stock.   Have a good selection of both new and used/tested tubes for audio, CB & HAM radio, TV, CRT use.
Sorry I do not have a Web Site nor a price list. Suggest that you Email or Fax me with the tubes that you are looking for along with the quantify of each needed. I will check my inventory and advise you of current availability and cost.
In addition, I also have a very good selection of tube testers, tube caddies and good used CB equipment. Please contact me regarding your needs.
Thank you for your consideration.

I just got my General too. I happened into a ton of DX during a contest a couple of weekends ago. Check out the ARRL web page calaner to see when another one is coming up. Of course these are only quick QSO's, but it's a ton of fun. I also came across some contacts the other night. I am very new at HF but with a little luck and a lot of listening I've had good QSO's with just a diploe and 100W. Good luck and hope to catch you on 20m.

73,

Thanks for the help. Apparently the procedure in the manual is incomplete. It left out the need to push the REV button after powering up. Thanks again.

I don't know of a SPECIFIC antenna, but if anyone suggests a few different ones, go to http://www.eham.net and they have product reviews - it's a great place to find out how well different antennas work.

Well aren't you lucky..............I am not allowed to have ANYTHING outside. Ever try to carry on a conversation with 25 plus TV sets dumping all their sweep garbage into the air? How about an S8 noise level and all using a random length of wire with counterpoises INSIDE? You have it made.

Pat

Yes I use a Cb, I can admit that but what does that have to do with me holding a FCC license for 23 years lets see you were born in 1970 I have held the license since 1978 I have been a ham almost your entire life, thats the point you cannot take and I am only 9 years older than you. Keep up the studying tho I know its hard to memorize 2 question pools .

Admit it. You're lying. I won't think any less of you. Then again, I really
can't think any less of you. A good place to start on your ham license is
http://www.arrl.net. Good luck on getting your ticket!

You'll find LOT'S of DX stations calling CQ on the bottom of the band, in
CW-land, every day, all day.  Try some different times of day too.... you
might have better luck later at night or early in morning on the SSB portion
of 20m.

As for the 'nets'... a lot of the nets are informal and welcome any comers,
but I guess I'd compare it to walking into a party where you don't know
anyone....  If you didn't come with someone who's going to introduce you to
everyone, you'll have to do that for yourself.  Some of the 'nets' are more
formal... Traffic Nets, etc... some are just fella's that have been meeting
for years on the same freq.

Another hint....... too many hams waste hours on the air looking for a CQ to
answer (whether CW or SSB)... Put out your own CQ!! (..just be sure to ask
if the freq's in use 1st!)

This subject has already been out for a while. I am the proud new owner of
a
vintage HW-8 with the Main tuning capacitor plates "GONE"!!! I have come
across
some references to some homebrewers refitting/gluing the plates back in
place.
My plates are GONE. Does anyone out there know the original configuration of
the Heath cap as delivered from the factory? I have heard speculation that
it was a 365 pF variable with every other plate removed. Correct? B.S. ??
Does anyone out there know a source of supply for this component? Anybody
out
there want to part with an extra variable cap? I am thinking of
"transplanting"
some plates from another capacitor, but I have never seen one intact. Perhaps
one
of you out there could describe the number and spacing of the plates on the
rotor section for me? I just do not know what it is supposed to look like!

Thanks for all your help.......73, Bill -K4WWD

        RATELCO Battery charger / Rectifier. Type FC481505A
Model # 102B-3608-00.  48 Volt @ 150 Amps, Float or Equalize.
These units were manufactured SEPT 1991 and are in the Factory
crates and have Never been used, have 2, sequential Serial numbers.

These units can be used as 48 volt charger for Telephone Central
Office Battery supply's with the ability to Float or Equalize.
They can also be used as a stand alone, well filtered, power
supply rated at 48 volts at 150 amps CONTINOUS DUTY.
Input = 110, 208, 240 Volts. 60 Hz, single phase

A must for the expirimenter working with the new generation
of 48 volt solid state RF devices Rated in excess of a Kilowatt.

Email for pictures in JPG format.

  Weight is approximately 550 pounds, Crated for freight shipping.

$1200.xx Each. OBO   Prepaid, in my garage.

>New Low Price   $800.xx  Each. OBO.   Prepaid, in my garage.

Loading and shiping are buyers responsibility.

Bob             rhawk@megabits.net

What about on 80 and 40m? I never hear CQs there. I tried once on 80
and never got a reply. Is it bad form, or what? Seems everyone on 80
already knows everyone. I have broken into informal multi-ham qso's
on 20 (did so just today while driving home from work.. it was a lot
of fun), but things don't seem so open on 80 and 40. What's your take
on these local bands? (I've had my general since December, but I've
been a listener for years)

I use an Icom T81A, but I've heard nothing bad about the RS offerings.
Check www.arrl.org for their reviews, as I belive they have recently covered
a RS HT.

Regards,

Paul, KC2FNC

I just thought I'd pass this along. I recently emailed a company that claims to have been in business for 40 yrs, selling radio equipement. My question was about one of the products for sale that I found on their website. I emailed them with the model number and asked what the frequency coverage was. They couldn't tell me!

After emailing the initial question, the reply I got was:

<<i don"t know>>

I replied, stating that they are the ones selling it, they should know. Here's the reply from them:

<< we stock over a 1000 ant's unless you can suppy more information like
manuf. freq to be used on ,
 type of ant like lopne wire, for w/t, for base,tower mt ant. BS-2 MEANS
NOTHING TO OUR COMPUTERS   JIM PE   ABC COMM. >>

When I replied again, stating that I felt this was very unprofessional for a company not to know what it sells and that I wouldn't buy a product from them, here's the reply I got:

<<GOOD!!! IF DON'T KNOW WHAT YOU WANT HOW ARE WE TO KNOW NO MORE E MAIL PLEASE
JIM HAVE A GOOD DAY>>

Nice and professional, eh? In short, stay away from ABC Communications in Washington State.

> on these local bands?  (I've had my general since December, but I've
> been a listener for years)

Well.... I call CQ on 40 all the time, always seem to have little problem
getting an answer.  I admit that most of my operation on 40 is CW, but there
is a group I check in wirth from time to time on SSB (GM Firebirds
Net..7.2775) and I've never had much trouble getting replies to SSB CQs
either.  I find 40 a very freindly band and fun for DXing late at night.

I don't have a lot of SSB experience on 80.... my antenna situation pretty
much keeps me in the CW part of the band, although I have done SOME 80m SSB
from the car (not much).  I'd kinda' do what you already have.... listen
around till you find a group you like, and join 'em... become a regular!

AND..... it's NEVER bad form to call CQ!!!

Coupla' years ago I had a thing for 160m... worked SOME DX (germany!) on a
random wire antenna and several contests... lots of CW... cool band, but I'm
sure I was one of the punier signals.

I looked at their site, and it has a search function.
No BS-2 antenna just a BS-1 by Workman. It is a wire dipole for CB.
Durham Radio has the same antenna they say it can be cut for cordless phones and 6 metres. So it will probably be ok for 10 m
Perhaps if you gave them the information they asked for, or searched yourself you could find more information.

I have a HTX-202 for sale. It is from the estate of KC4F, and it works very
well.  Minimum bid of $75 includes shipping to US addresses.

My name, call sign, and references from other Internet sales are available upon
request.

```

Those who live in subdivisions may wish to visit the consumer section of the FCC web site (www.fcc.gov/) for the latest Fact Sheet on Antenna Placement. This helpful guide was written in February 2001, and is in Q&A format.

It appears that the FCC has stepped in to insure that homeowner associations cannot impede a resident's ability to pick up television programming over the air or by Satellite, and it recently expanded this authority to cover antennas that receive and transmit fixed wireless signals.

At this time, the FCC is not extending protection to other types of antennas, such as Amateur, CB, GMRS, etc.

The full URL is:

http://www.fcc.gov/csb/facts/otard.html

I have just upgraded to a General Class operator and have been operating on 20m for a couple of weeks. I would like to get into the swapping of QSL cards. Does anyone have pointers on what I need to know to get started? Any would be appreciated. I've had a lot of DX QSO's and they mention the bureau a lot. How does that work? And where is a good place to get QSL cards printed? Many thanks for the helpful advice.

Yes it seems old VHFBuff is a full fledged closet Cber, now I know which frequencies you were using the Ranger 2950 on.

Not specifically.  Just make sure you use a good braided ground strap
from the chassis directly to ground and wire the power directly to the
battery and you should be ok.

The contest is sponsored by CQ magazine so you can check for the specific rules in the magazine or on their web page. It is the CQ WPX Contest. The goal is to get a bunch of different prefixes. 59 is the stock signal report for a contest and the number, say 1234, is a sequencial number for the contact, meaning you are his contact number 1,234 in the contest. You give your contact number, say 01, and go from there. Anyone can participate--nobody twists your arm to send the logs in when
the contest is over. I've made thousands of contest contacts over the years but have never actually entered. Great for states, prefixes, DXCC--whatever you are chasing. Have fun. It's radio.

NEW PROGRAM TOPHAT1.exe

TOP CAPACITANCE LOADING OF SHORT VERTICAL ANTENNAS

Loaded by any number, zero upwards, of uniformly-spaced radial rods or wires, of specified length and diameter, circled by a ring of wire. With only one radial you have an iverted-L. By entering a large number of wires the hat will have the same capacitance as a disk of close-mesh chicken wire.

Enter antenna height and diameter, frequency. Guidance provided on estimating ground loss resistance. A coil is always needed either at the antenna base or incorporated in an L-match. Coil Q is asked for.

The performance of a short top-loaded antenna is generally several dB better than a coil-loaded antenna of the same height with the coil fitted 2/3rds of the way up the antenna. With a largish top hat the antenna current is sufficiently uniform vs height for there to be little or no advantage gained by inserting a coil in the antenna. It can then be incorporated in the L-match or an automatic ATU and the antenna can be operated multi-band. With coil loading multiband working is not possible except with screwdriver-type antennas.

The superiority of capacitance loading is due to the smaller inductance needed to maintain resonance. If the coil has the same overall dimensions, and hence approximately the same Q, the coil loss resistance will be reduced for no increase in loss in the hat.

Sweep the principal input parameters over wide ranges using adjacent up/down keys on the keyboard while observing corresponding changes in radiating efficiency. The improvement in dB is calculated due to the hat compared with no hat.

Download TOPHAT1, 44 kilobytes, in a few seconds from website below.

Hi all, I just picked up a old tube set called FT101E

no manual, can anybody tell me anything about this radio?
I paid a whopping $50 at a garage sale, it lights up and I can hear
code when I twist the knobs right.

Malcolm - The 101E is the second to the last of a very popular series of
Ham HF Transceivers in the 60s or 70s. Its all solid state except for
the driver tube [12BY7?] and the two final tubes. [Two 6SJ6s?]   Has a
build in AC power supply, but can run off a 12 volt battery with the
also build in switching power supply. Runs about 100 watts on 160
through 10 meters. [no WARC bands in those days]

Good luck with a great work horse rig. $50 was a good find.

73 Bob W7AVK

If you are going to use it on the higher HF bands, a simple whip is ok. On the lower bands, it will load, if you use a SGC-230 type tuner. If you try a cheaper tuner, such as a LDG, it probably won't. Too much inductance needed. Even if you do manage to match the whip, the radiation efficiency will be unacepptably low. Trust me: get a loaded whip of some sort. SGC uses one that has a self resonance point around 14 MHz. That loads from 80-10 meters. Jim

The radios are modified to operate out-of-band, which isn't a good idea even
if they were licensed.  If they are interested in 1/4 - 1/2 mile
communication, a pair of FRS radios are inexpensive and legal.  Non-licensed
communication on 2m will stick out like a sore thumb.

>Just wait. The CW part of the contest starts tomorrow. Keep grinning!

No, it doesn't start tomorrow.  But I will keep grinnin' ... because
when it DOES start, the CW contest doesn't use the WARC bands.  And
all the non-contesting SSB ops will be crammed together on 12 and 17
meters, suckin' up 2000 hz (and often MUCH more) per qso.  All I need
for a solid CW ragchew on 30 meters is 5 watts and 500Hz of bandwidth.
BIG grin!

I don't mean to start a code vs no-code debate, as a I don't give a
hoot what modes anyone chooses to operate.  Just wanted to point out
that there are HF bands and modes available to non-contest operators
where civility and fun still reign.  In fact, the contests makes 30
meters even more interesting, since many occasional CW ops come out of
the woodwork for the weekend.

Has anyone tried building their own amp?  I've seen several homebuilt stuff
from years ago...but not many people today want to go through the trouble.
If I could get a schematic I'd try to build myself one...just a thought.

I'm using the SGC2020 HF radio, which puts out about 20/25 watts to begin
with.  It works great, and the price is right.

If you really must know, it was the exciter rig for a 10m to 6m transverter,
which I sold a while back. It's been sitting on the shelf for a while
collecting dust, so I figured I'd sell it with some other equipment and save up
enough for a 706. I am getting an Icom 706 because I plan to upgrade within the
next 6 months. You should consider getting your ticket. Ham radio is quite
interesting.

Isn't it time for your nightly medication, gramps?

I've never done it, but I suppose with the right plans I might be
convinced to give it a shot!

Do you think it would be legal if a licensed ham was in the vicinity
and monitoring the broadcasts? It's been a while since I read the
rules - can this be done? Also, they're going to be using these to
referee a game indoors - does this sort of thing fall under amateur
operations?

>The radios are modified to operate out-of-band, which isn't a good idea even

Yeasu 757.   have used one mobile for 10 years now.  no problems and its a
great radio...     I have used it tent camping with battery hookup and long
wire, in a trailer and mobile   in the last two I use the hustler antenna's..

jhilins,

I have no idea if the Jeep is more susceptible to RF than other vehicles, but I'll offer this. Route all cables as far from the 'computer' as possible. Do NOT use braid as a ground strap, it will deteriorate in weather. Instead, use a copper strap such as the flashing used around roofs. And make the best mechanincal connection you can. Most problems with mobile antennas usually come back to grounding.

The standard steel whip, or SGC's whip are useless on the lower HF bands. They ~will~ load, but no one will hear you. If your going to use 80 and 40 meters, invest in some kind of loaded antenna, otherwise you will be a very frustrated camper.

'Doc

PS - Also, invest in a 5 gallon bucket of torroids...

I occasionally set my TS850 in the seat next to me and use
a Hustler antenna on 20 meters...no special wiring...just ran
the power from the 850 directly to the battery...use RG58
to the antenna mounted on the rear bumber...has worked
fine, little or no ignition noise from a 97 TJ.

Doc,

It amazes me that the tuner/whip combinations garner any sales at all. Of course, it is just MHO, BUT that opinion is based on many years of HF mobile study, installation, and mistakes. In some cases, a hamstick will outperform those things--and a hamstick is just about the worst thing on the lower bands. I wouldn't waste my time, nor my hard earned cash, on those things.

It is an unfortunate thing that some people *really* believe that a "tuner" actually "tunes" an antenna. I had such a conversation with a supposedly knowledgable Extra class last week! When I pointed out that tuners don't "tune" the antenna, he confidently assured me that a certain brand of "tuner" both (quote) "physically and electrically" tune the whip! PHOOEY! I hear sub-standard mobiles on the air all the time. They are often down in the mud, unreadable, or just not even *there*. Yet their owners swear by the "great" performance their tuner/whip combo is giving, how "good" their hamstick (dummy load on a stick) is, and my question is always: Compared to WHAT? Put 'em in field trials, run field strength tests against bugcatchers and screwdrivers. See the superior field strength of competitive, high Q, RESONANT antennas--it'll make ya sick! I guarantee your tuner/whip or hamstick will get MASHED in a field trial.

Now, having thrown off on the tuners, etc, let me say this: Certainly, there are times when it is not feasible to use higher efficiency antennas. The spouse threatens bodily harm if you drill holes in the new car, or there is no way to attach a big antenna. You do what you have to with what you can. And that is understandable. But if you are out for the best signal you can obtain, it takes a BIG, UGLY antenna to do the job.

Jeez Jerry, you're confusing the heck out of me.

Didn't you say a couple of weeks ago when someone asked about wiring a CB to: wire the hot side to the battery and the neg side to a nearby bare metal groud?

I had thought of wiring my CB direct to the battery (pos & neg, both fused) and then had second thoughts after reading that post of yours.

Now I've interpretted your post below to say pos and neg to battery.

Paul

No, the braided (or whatever) ground strap I was referring to goes between the radio's chassis and the Jeep body or chassis. It's just that a braided ground strap provides not only a good DC ground, but a good RF ground too. The positive side still goes to directly to the battery through an inline fuse. The rule-of-thumb is that the ground wire should go to the closest possible electrical ground. The ground wire can either be the black wire, or simply a ground-wire (or braided ground wire) connected between the radio's chassis (like a cabinet screw) and the Jeep's body or chassis. HTH!

Jerry

Hello, go with a screwdriver antenna, it does not need a tuner...its big, its ugly, but it beats everything else, that I've tried. Hamsticks work soso above 40m, but for 75 go with the screwdriver. Ground the rig to nearest chassis ground, just grounding thru the coax shield is not good enough. It will work some without it but will work better with chassis ground.   I've used a 706 for a couple of years and have learned the importance of good grounds and good antennas. On the bugcatcher, they work fine, but everytime you want to change frequency you have to stop and move the jumper. Hope this helps...AL

What makes it legal or illegal is not that someone is listening across the street, but rather that you are complying with the rules. Good advice is to go get a pair of FRS radios which can run all day on AA batteries and require no license. Sure--go ahead and use those 2 meter radios without a license and see how expensive it can get. NAL's always have a dollar sign, a number or two, followed by three zero's. Could be real expensive, so just put them back on the shelf and forget them.

Hi folks,

Just wondering if there are any recommendations for a good two-way
install shop in Brooklyn or Queens (or thereabouts). I bought a new

remote-head Yaesu FT-90R recently, and I'd like to find someone who
knows how to do neat, clean installs in high-end cars.

While I could do the job myself, it would likely end up quite messy.
My installs always work well, but I've always been a bit of a klutz
around cars, and especially working under the dash of modern
vehicles--no thanks <grin>.

Any help in the next couple of days would be tremendously appreciated
as I was hoping to take a quick vacation this weekend. If replying by
e-mail please reply only to the address in my .sig and not the
reply-to address.

Thanks again.

```

Hi there

I have a Kenwood TK759 VHF mobile radio. The programming software makes mention of a P.A. facility. This is supported by a 3.5mm jack socket on the back of the radio.

I have assigned a key to activate this function, however there is no clear mention of how to adjust the P.A. volume. I can hear that the function is active in that there is a click on the speaker when the PTT is pushed and a minute amount of audio can be heard.

Does anyone in the group know how to adjust this volume as neither the operators manual nor the software indicates this?

All help gratefully received!

Thanks in advance.

Regards.

Jerry,
   Your lucky.  In this part of the country, if braid
is exposed to the weather, it lasts maybe 6 months.
Then you start getting some really weird changes.
                   'Doc

Hi there!

Indoors or outdoors, short distance or worldwide, sporting or otherwise - ANY use of Amateur frequencies/bands is allowed to licensed Amateurs ONLY. Even if this could be handled as 3rd Party Traffic (as is sometimes done on HF) you would still need 2 Hams *right there* and monitoring the *entire* time. And that defeats the whole purpose of having your "own" radios!

You can either
a. Have each user get a Ham license, which is cheap but time-consuming (studing for and taking a basic Technician license exam, but no morse code test required), or
b. Get some FRS radios, which is quick but costs more money (since the good ones have lots of channels and "quiet codes" or whatever they're called on that model).

Actually, I have FRS radios because The Spouse is not a Ham. They work extremely well for us over the ranges you mentioned, both indoors and out.

But of course, I would personally encourage you to become a Ham.... ;-)

Good luck!

Lisa
AC7GE

Actually, I'm already a Ham :)  I'm just trying to keep my friend from
getting in trouble.  I've told them pretty much the same thing people
have told me here.  He's willing to sell them, but only if he can take
care of all five of them at once.  I'm going to start looking around
and see if I can find any takers for them.  Haven't tested them out
myself yet, but the ones I've seen seem to be in decent condition.

Anyone interested in some used IC-T2H handhelds?

Zach, KC0IUX

Perhaps he should try Ebay. I am sure he'd get a fair price for them. If he's
got 5, he can do a Dutch Auction. They retail for around $160 from Texas
Towers.

Hi Zach
I will tell you a little story that happened here in Vancouver BC Canada a few years ago.

2 boaters were using modified radios just below the 2 meter band. The only problem was that the frequency that they chose was the input to the Vancouver City Police repeater. They could not hear the output from the repeater and all the calls from the dispatcher to get off the frequency. The repeater is high and has a good coverage both transmit and receive. The 2 boaters were only transmitting a mile or two apart but interfering with a radio system 50 miles a way. The two fishing boats were bound for Victoria BC and were met by the government when they docked. I understand that the boats were seized and fines were high. The entire conversation from 10:00 am until 5:00 pm was taped.

Just because you don't hear some one on a frequency that doesn't mean that someone doesn't own that frequency. Spectrum space on VHF is limited. As for the ham bands, in a big city they will be monitored quickly and may end up on an input to a repeater that would piss a lot of radio savvy people off that could find them fast. If you help them you could also be up for a big fine so be careful.

--

Yours In Solidarity

William E. Gammert

> A few friends of mine (non-licensed) recently came across a pair of 2-meter handhelds that they intend to use as walkie-talkies. The radios have been modified (software mod, I think) so they can talk outside of the ham bands (from 136.0 to 143.95). Are there any frequencies available to them in that range? All the use will be taking place within about 1/4-1/2 mile of eachother. Can they use any of those freqs, or will they be better off getting licenses so that they can use the ham bands legally?

Here we have another spammer. He misleads
in the subject line by saying this item
is FS "OR" For Sale "OR" misleads and
indicates said item is for sale when it
is actually FA = For Auction. The FA is
used by those of us that do not Do Auctions.
We set our spam filters for FA in the subject
line and we do NOT have to see the auction
spam. Do not trust this person.

"If they Lie in the subject line"
They will have no problem misrepresenting
the JUNK they have at the Auction..

Just My Opinion..

Bob

I cannot get the alphanumeric momory name function to work on my Kenwood TM-261. I bought the radio used and don't know much history on it. I have tried a full memory rest with little success. Here is what I have observed:
--When I follow the procedure to program memory names, the radio comes on as normal. However a time-out beep occurs after a short time like it was in a menu.
--The MN button beeps when pushed as if it is toggling between alpha-numeric and number display but no change in the display.
I'm stumped and any help would be appreciated.

73,
Allen

I have a pair of older HTs by Yaesu.They are the FT-109RH and the
FT-709R...220 and 440.
I also have a dropin charger,and cigar liter cord and the copies of the
manuals as I got with them.I am asking for the works $225.00 or make me a
resonable offer.Lets talk if you are interested.Email me direct.

You had better memorize the formulas for the last question pool, memorizing
the questions will only get you so far on that one.

The gentleman wants to trade an item for "a working HF10-80 meter rig"

In my opinion that would be Ham related.

Bob

Good opinion if you think its a good idea that you shoot each other with them more often in a day than people do in any other country in a year. As has been noted elsewhere in the thread though, since it is offered in trade for a radio, it is a legit post for this NG.

If you would care to reply to this post, please do so in an appropriate NG and CC in email.

Subject: Solarcon, Hygain, and MFJ HF antenna info needed
Message-ID: <20010318182933.24154.00001855@ng-fx1.aol.com>
Xref: supernews.google.com rec.radio.amateur:1232

I need a smaller sized HF antenna as I live in an apartment. It needs to be a
vertical as there is no where to string a dipole. The following brands/models
fit my needs but I would like to hear from people who have used them:
Solarcon A99
Hygain 12AVQ
Hygain 14AVQ/WB
MFJ 1796
I am very interested in hearing how these antennas work with DX. Any and all
